

Formus Carthurana Alumni revile. ne vile vels

A N

ESSAY

CONCERNING

Human Understanding.

BY

JOHN LOCKE, Gent.

VOLUME II.

L O N D O N:

Printed for A. BETTESWORTH and C. HITCH at the Red Lion in Pater-Nofter-Row; E. PARKER at the Bible and Crown in Lombard-Street; J. and J. PEMBERTON at the Golden Buck in Fleetsfreet; and E. Symon against the Royal-Exchange in Cornbill. MDCCXXXV.

THE

CONTENTS.

BOOK III.

Of Words.

CHAP.

- 1. Of Words or Language in general.
- 2. Of the Signification of Words.
- 3. Of general Terms.
- 4. Of the Names of simple Ideas.
- 5. Of the Names of mixed Modes and Relations.

CHAP.

- 6. Of the Names of Substances.
- 7. Of abstract and concrete Terms.
- 8. Of the Imperfection of Words.
- 9. Of the Abuse of Words.
- 10. Of the Remedies of the foregoing Imperfections and Abuses.

BOOK IV.

Of Knowledge and Opinion.

CHAP.

- 1. Of Knowledge in General.
- 2. Of the Degrees of our Knowledge.
- 3. Of the Extent of Human Knowledge.
- 4. Of the Reality of our Knowledge.
- 5. Of Truth in general.
- 6. Of universal Propositions, their Truth and Certainty.
- 7. Of Maxims.
- 8. Of trifling Propositions.
- 9. Of our Knowledge of Existence.
- 10. Of the Existence of a GOD.

CHAP.

- istence of other Things.
- 12. Of the Improvement of our Knowledge.
- 13. Some other Confiderations concerning our Knowledge.
- 14. Of Judgment. 15. Of Probability.
- 16. Of the Degrees of Affent.
- 17. Of Reafon.
- 18. Of Faith and Reason, as contra-distinguished.
- 19. Of Enthusiasm.
- 20. Of wrong Affent or Error. 21. The Division of the Sciences.
- A₂ THE

THE

CONTENTS.

BOOK III.

CHAP. I.

Of Words or Language in General.

SECT.

- 1. Man fitted to form articulate Sounds.
- 2. To make them Signs of Ideas.
- 3, 4. To make general Signs.
- 5. Words ultimately derived from such as signify sensible Ideas.
- 6. Distribution.

CHAP. II.

Of the Signification of Words.

SECT.

- 1. Words are sensible Signs necessary for Communication.
- 2,3. Words are the sensible Signs of his Ideas who uses 'em.
- 4. Words often secretly referred, First, to the Ideas in other Mens Minds.
- 5. Secondly, To the Reality of Things.
- 6. Words by Use readily excite Ideas.

7. Words often used without Signification.

8. Their Signification perfectly Arbitrary.

CHAP. III.

Of General Terms.

SECT.

- 1. The greatest part of Words General.
- For every particular Thing to have a Name, is impossible.
- 3, 4. And useless.
- 5. What things have proper Names.
- 6, 8. How general Words are made.
- 9. General Natures are nothing but abstract Ideas.
- 10. Why the Genus is ordinarily made use of in Definitions.
- General and Univerfal are Creatures of the Understanding.
- 12. Abstract Ideas are the Effences of the Genera and Species.
- 13. They are the Workmanship of the Understanding, but have their Foundation in the Similitude of Things.

- 14. Each distinct abstract Idea is a distinct Essence.
- 15. Real and Nominal Essence.
- Constant Connection between the Name and Nominal Efsence.

17. Supposition, that Species are distinguished by their real Essences, useless.

- 18. Real and nominal Effence the fame in simple Ideas and Modes, different in Substances.
- 19. Essences ingenerable and incorruptible.
- 20. Recapitulation.

CHAP. IV.

Of the Names of simple Ideas.

SECT.

1. Names of simple Ideas, Modes and Substances, have each something peculiar.

2. First, Names of simple Ideas and Substances, intimate real Existence.

- 3. Secondly, Names of simple Ideas and Modes signify always both real and nominal Essence.
- 4. Thirdly, Names of simple Ideas undefinable.
- 5. If all were definable, 'twould be a Process in infinitum.
- 6. What a Definition is.
 7. Simple Ideas, why undefinable.
 8, 9. Instances, Motion.

10. Light.

- 11. Simple Ideas why undefinable, farther explained.
- 12,13. The contrary shew'd in complex Ideas by Instances of a Statue and Rainbow.
- 14. The Names of complex Ideas,

when to be made intelligible by Words.

15. Fourthly, Names of simple Ideas least doubtful.

16. Fifthly, simple Ideas have few Ascents in linea prædicamentali.

27. Sixthly, Names of simple Ideas, stand for Ideas not at all Arbitrary.

CHAP. V.

Of the Names of mixed Modes and Relations.

SECT.

1. They stand for abstract Ideas as other general Names.

2. First, the Ideas they stand for are made by the Understanding.

3. Secondly, Made arbitrarily, and without Patterns.

4. How this is done.

- 5. Evidently arbitrary, in that the Idea is often before the Existence.
- 6. Instances, Murther, Incest, Stabbing.

7. But still subservient to the End of Language.

8. Whereof the intranslatable Words of divers Languages are a Proof.

9. This shews Species to be made for Communication.

- 10, 11. In mixed Modes, 'tis the Name that ties the Combination together, and makes it a Species.
- 12. For the Originals of mixed Modes, we look no farther than the Mind, which also shews 'cm to be the Work-manship of the Understanding.

A 3

13. Their being made by the Understanding without Patterns, shews the Reason why they are so compounded.

14. Names of mixed Modes stand always for their real

Essences.

15. Why their Names are usually got before their Ideas.

16. Reason of my being so large on this Subject.

CHAP. VI.

Of the Names of Substances. S E C T.

1. The common Names of Subflances fland for forts.

2. The Essence of each sort is

the abstract Idea.

3. The nominal and real Effence different.

4-6. Nothing effential to Individuals.

7-8. The nominal Essence bounds

the Species,

9. Not the real Essence, which

we know not.

10. Not substantial Forms, which we know less.

 That the nominal Effonce is that whereby we distinguish Species, farther evident from Spirits.

12. Whereof there are probably

numberless Species.

13. The nominal Escace that of the Species, proved from Water and Ice.

14-18. Difficulties against a certain number of real Essences.

19. Our nominal Essences of Substances, not perfect Collections of Properties.

21. But such a Collection as our Name stands for.

22. Our abstract Ideas are to us the Measures of Species. Instances in that of Man.

23. Species not distinguished by

Generation.

24. Not by substantial Forms.

25. The Specifick Essences are made by the Mind.

26. Therefore very various and uncertain.

27. But not so arbitrarily as mixed Modes.

28. Though very Imperfect.

29. Which yet serves for common Converse.

30. But makes several Essences figuified by the same Name.

31. The more general our Ideas are, the more incompleat and partial they are.

32. This all accommodated to the End of Speech.

33. Instances in Cassuaries.

34. Men make the Species, Inflance Gold.

35. Though Nature make the Similitude.

36. And continues it in the Races of things.

37. Each abstract Idea is an Essence.

38. Genera & Species in order to naming. Instance, Watch.

39. Species of artificial Things less confus'd than natural.

40. Artificial Things of distinct
Species.

41. Substances alone have proper Names.

42. Difficulty to treat of Words with Words.

43,44. Instance of mixed Modes in Kineah and Niouph.

45, 46. Instances of Substances in Zahab.

47. Their Ideas perfect, and therefore various.

48.

48. Therefore to fix their Species, a real Essence is supposed.
49. Which Supposition is of nouse.
50. Conclusion.

CHAP. VII.

Of Particles.

SECT

1. Particles connect Parts, or whole Sentences together.

2. In them confifts the Art of well speaking.

3, 4. They shew what Relation the Mind gives to its own Thoughts.

5. Instance in But.

6. This Matter but lightly touched here.

CHAP. VIII.

Of Abstract and Concrete Terms. S E C T.

- 1. Abstract Terms not predicable one of another, and why.
- 2. They shew the Difference of our Ideas.

CHAP. IX.

Of the Imperfection of Words. S E C T.

- 1. Words are used for recording and communicating our 1 Thoughts.
- 2. Any Words will serve for recording.

3. Communication by Words, Civil or Philosophical.

4. The Impersection of Words, is the Doubtfulness of their Signification.

5. Causes of their Imperfesti-

6. The Names of mixed Modes doubtful. First, Because the Ideas they stand for, are so complex.

7. Secondly, Because they have no Standards.

8. Propriety not a sufficient Remedy.

9. The way of learning these Names, contributes also to their Doubtfulness.

10. Hence unavoidable Obscurity in ancient Authors.

12. Names of Substances referred, First, to real Essences that cannot be known.

13, 14. Secondly, To co-existing Qualities, which are known but impersectly.

15. With this Imperfection they may serve for Civil, but not well for Philosophical Use.

16. Instance Liquor of Nerves.

17. Instance Gold.

18. The Names of simple Ideas, the least doubtful.

19. And next to them simple Modes.

20. The most doubtful, are the Names of very compounded mixed Modes and Substances.

21. Why this Imperfection charged upon Words.

22, 23. This should teach us Moderation, in imposing our own sense of old Authors.

C H A P. X.

Of the Abuse of Words.

SECT.

1. Abuse of Words.

2, 3. First, Words without any, or without clear Ideas.

4. Occasioned by learning Names before the Ideas they belong to.

5. Secondly, Unsteady Applica-

tion of them.

6. Thirdly, Affected Obscurity by wrong Application.

7. Logick and Dispute has much contributed to this.

8. Calling it Subtilty.

9. This Learning very little benefits Society.

10. But destroys the Instruments of Knowledge and Communication.

11. As useful as to confound the Sound of the Letters.

12. This Art has perplexed Religion and Justice.

13. And ought not to pass for Learning.

14. Fourthly, Taking them for Things.

15. Instance in Matter.

16. This makes Errors lasting. 17. Fifthly, Setting them for

what they cannot signify.
18. V. g. putting them for the

real Estince of Substances.

19. Hence we think every
Change of our Idea in Substances not to change the
Species.

20. The Cause of this Abuse, a Supposition of Nature's work-

Supposition of Nature's working always regularly. 21. This Abuse contains two

false Suppositions. 22. Sixthly, A Supposition, that Words have a certain and evident Signification.

23. The Ends of Language, First, to convey our Ideas.

24. Secondly, To do it with Quickness.

25. Thirdly, Therewith to convey the Knowledge of Things. 26, 31. How Mens Words fail in all these.

32. How in Substances.

33. How in Modes and Relati-

34. Seventhly, Figurative Speech also an Abuse of Language.

CHAP. IX.

Of the Remedies of the foregoing Imperfections and Abuses.

SEĆT.

1. They are worth seeking.

2. Are not easy.

3. But yet necessary to Philosophy.

4. Misuse of Words, the Cause of great Errors.

5. Obstinacy.

6. And Wrangling.

7. Instance Bat and Bird.

8. First, Remedy to use no Word without an Idea.

 Secondly, To have diffinet Ideas annexed to them in Modes.

10. And distinct and conformable in Substances.

11. Thirdly, Propriety.

12. Fourthly, To make known their Meaning.

13. And that three ways.

14. First, in simple Ideas by synonimous Terms or shewing.

by Definition.

16. Morality capable of Demonfiration.

17. Definitions can make moral Discourses clear.

18. And is the only way.

19. Thirdly, In Substances, by specing and actining.

20, 21. Ideas of the leading Qualities of Substances, are lest got by shewing.

22. The Ideas of their Powers best by Definition.

23. A Reflection on the Knowledge of Spirits.

24. Ideas also of Substances, must be conformable to Things.

25. Not easy to be made so.

26. Fifthly, By Constancy in their Signification.

27. When the Variation is to be explained.

BOOK IV.

C H A P. I..

Of Knowledge in general. § E C T.

- 1. Our Knowledge conversant about our Ideas.
- 2. Knowledge is the Perception of the Agreement or Difagreement of two Ideas.
- 3. This Agreement four-fold.
- 4. First, Of Identity or Diversity.
- 5. Secondly, Relation.
- 6. Thirdly, of Co-existence.
- 7. Fourthly, of real Existence.

 8. Knowledge astual or hobis
- 8. Knowledge actual or habitual.
- 9. Habitual Knowledge twofold.

CHAP. II.

Of the Degrees of our Knowledge. S E C T.

- 1. Intuitive.
- 2. Demonstrative.
- 3. Depends on Proofs.
- 4. But not so easy.
- 5. Not without precedent Doubt.
- 6. Not fo clear.
- 7. Each step must have intuitive Evidence.
- 8. Hence the mistake ex præcognitis & præconcessis.

- 9. Demonstration not limited to Quantity.
- 10,13. Why it has been so thought.
 - 14. Sensitive Knowledge of particular Existence.
 - 15. Knowledge not always clear where the Ideas are so.

CHAP. III.

Of the Extent of Human Knowledge.

- SECT.
 - 1. First, No farther than we have Ideas.
 - 2. Secondly, No farther than we can perceive the Agreement or Disagreement.
 - 3. Thirdly, Intuitive Knowledge extends it felf not to all the Relations of all our Ideas.
 - 4. Fourthly, Nor demonstrative Knowledge.
 - 5. Fifthly, Sensitive Knowledge narrower than either.
 - 6. Sixthly, Our Knowledge therefore narrower than our Ideas.
 - 7. How far our Knowledge reaches.
 - 8. First, Our Knowledge of Identity and Diversity, as far as our Ideas.
 - 9. Secondly, Of Co-existence a very little way.

10,

 Because the Connection between most simple Ideas is unknown.

11. Especially of secondary Qualities.

12, 14. And farther, because all Connection between any Secondary and Primary Qualities is undiscoverable.

15. Of Repugnancy to co-exist larger.

16. Of the Co-existence of Powers a very little way.

17. Of the Spirits yet narrower.

18. Ibirdly, Of other Relations it is not eafy to fay how far. Morality capable of Demonfiration.

19. Two things have made moral Ideas thought uncapable of Demonstration. Their Complexedness, and want of sensible Representations.

20. Remedies of those Difficul-

21. Fourthly, of real Existence:

we have an intuitive Knowledge of our own; demonstrative of God's; sensible of
some few other things.

22. Our Ignorance great.

23. First, One cause of it, want of Ideas, either such as we have no Conception of, or such as particularly we have not.

24. Because of their Remoteness, or,

25. Because of their Minuteness.

26. Hence no Science of Bodies. 27. Much less of Spirits.

28. Secondly, Want of a discoverable Connestion between Ideas we have.

29. Instances.

30. Thirdly, Want of tracing our Ideas.

31. Extent in respect of Uni-

CHAP. IV.

Of the Reality of our Knowledge.

SECT.

1. Objection, Knowledge placed in Ideas, may be all bare Vision.

2, 3. Answer, Not so, where Ideas agree with Things.

4. As First, All simple Ideas do. 5. Secondly, All complex Ideas

excepted.

6. Hence the Reality of mathematical Knowledge.

7. And of Moral.

8. Existence not required to make it real.

 Nor will it be lefs true or certain, because moral Ideas are of our own making and naming.

10. Mifnaming diffurbs not the certainty of the Knowledge.

11. Ideas of Substances have their Archetypes without us.

12. So far as they agree with those, so far our Knowledge concerning them is real.

13. In our Enquiries about Substances, we must consider Ideas, and not consine our Thoughts to Names or Species supposed set out by Names.

14, 17. Objection against a Changeling being something between a Man and Beast, answered.

18. Recapitulation.

CHAP. V.

Of Truth in general.

S E C T.

1. What Truth is.

2. A right joining, or separating

ting of Signs; i.e. Ideas or Words.

3. Which make mental or verbal Propositions.

4. Mental Propositions are very hard to be treated of.

5. Being nothing but the joining or separating Ideas without Words.

6. When mental Propositions contain real Truth, and when verbal.

7. Objection against verba! Truth, that thus it may all

be chimerical.

8. Answer'd, real Truth is about Ideas agreeing to Things.

 Falsbood is the joining of Names otherwise than their Ideas agree.

10. General Propositions to be

treated of more at large.

11. Moral and Metaphysical
Truth.

CHAP. VI.

Of Universal Propositions, their Truth and Certainty.

SECT.

1. Treating of Words necessary to Knowledge.

2. General Truths hardly to be understood, but in verbal

Propositions.

3. Certainty twofold, of Truth

and of Knowledge.

- 4. No Proposition can be known to be true, where the Essence of each Species mentioned is not known.
- 5. This more particularly concerns Substances.
- 6. The Truth of few universal

Propositions concerning Substances, is to be known.

7. Because Co existence of Ideas in seco Cases is to be known.

8, 9. Instance in Gold.

10. As far as any fuch Co-exifience can be known, so far universal Propositions may be certain. But this will go but a little way, because,

11, 12. The Qualities which make our complex Ideas of Substances, depend mostly on external, remote, and unperceived Causes.

13. Judgment may reach farther, but that is not Know-

ledge.

14. What is requifite for our Knowledge of Substances.

15.Whilftour Ideas of Substances contain not their real Confitutions, we can make but five general certain Propositions concerning them.

16. Whe ein lies the general Certainty of Propositions.

CHAP. VII.

Of Maxims.

SECT.

1. They are felf-evident.

2. Wherein that Self-evidence confists.

3. Self-evidence not peculiar to received Axioms.

4. First, As to Identity and Diversity, all Propositions are equally self-evident.

 Secondly, in Co-existence we have few self-evident Propositions.

6. Thirdly, in other Relations we may have.

7. Fourthly, Concerning real Existence, we have none.

8. These Axioms do not much influence our other Know-ledge.

9. First, Because they are not the Truths we first knew.

10. Secondly, Because on them the other Parts of our Knowledge do not depend.

11. What use these general

Maxims bave.

12. Maxims, if care be not taken in the use of Words, may prove Contradictions.

13. Instance in Vacuum.

14. They prove not the Existence of Things without us.

15. Their Application dangerous about complex Ideas.

16, 18. Instance in Man.

19. Little use of these Maxims in Proofs where we have clear and distinct Ideas.

20. Their use dangerous where our Ideas are confused.

CHAP. VIII.

Of trifling Propositions.

SECT.

1. Some Propositions bring no Increase to our Knowledge.

2, 3. As, First, Identical Propositions.

4. Secondly, When a part of any complex Idea is predicated of the whole.

5. As part of the Definition of

the Term defined.

6. Instance Man and Palfry.
7. For this teaches but the Sig-

7. For this teaches but the Signification of Words.

8. But no real Knowledge.

 General Propositions concerning Substances, are often trifling.

10. And Why.

11. Thirdly, Using Words vari-

oufly, is trifling with them.

12. Marks of Verbal Pro oftions. First, Predication in abstract.

13. Secondly, A part of the Definition predicated of any Term.

CHAP. IX.

Of our Knowledge of Existence. S E C T.

1. General certain Propositions concerning not Existence.

2. A threefold Knowledge of Existence.

3. Our Knowledge of our own Existence is intuitive.

CHAP.X.

Of our Knowledge of the Existence of a GOD.

SECT.

1. We are capable of knowing certainly, that there is a GOD.

2. Man knows that he himself is.

3. He knows also, that nothing cannot produce a Being, therefore something Eternal.

fore something Eternal.

4. That eternal Being must be most Powerful.

5. And most knowing.

6. And therefore GOD.

7. Our Idea of a most perfest Being, not the sole Proof of a G O D.

8. Something from Eternity.

9. Two forts of Beings, Cogitative and Incogitative.

10. Incogitative Being cannot produce a Cogitative

11, 12. Therefore there has been an eternal Wifdom.

13. Whe-

13. Whether material or no.

14. Not material. First, because every Particle of Matter is not cogitative.

15. Secondly, One Particle alone of Matter, cannot be

cogitative.

16. Thirdly, A System of incogitative Matter, cannot be cogitative.

13. Whether in Motion or at Rest.

18, 19. Matter not co-eternal with an eternal Mind.

CHAP. XI.

- Of the Knowledge of the Existence of other Things.
- SECT.
 - 1. Is to be had only by Sensa-
 - 2. Instance, Whiteness of this Paper.
 - 3. This, tho' not so certain as Demonstration, yet may be call'd Knowledge, and proves the Existence of Things without us.
 - 4. First, Because we cannot have them but by the Inlet of the Senses.
 - 5. Because an Idea from actual Sensation, and another from Memory, are very distinct Perceptions.
 - 6. Thirdly, Pleasure or Pain, which accompanies actual Sensation, accompanies not the returning of those Ideas without the external Objects.
 - Fourthly, Our Senses assist one another's Testimony of the Existence of outward Things.

- 8. This Certainty is as great as our Condition needs.
- 9. But reaches no farther than actual Sensation.
- 10. Folly to expect Demonstration in every thing.
- 11. Past Existence is known by Memory.
- 12. The Existence of Spirits not knowable.
- 13. Particular Propositions concerning Existence, are knowable.
- 14. And general Propositions concerning abstract Ideas.

CHAP. XII.

Of the Improvement of our Knowledge.

SECT.

- 1. Knowledge is not from Maxims.
- 2. The Occasion of that Opinion.
- 3. But from the comparing clear and distinct Ideas.
- 4. Dangerous to build upon precarious Principles.
- 5. This no certain way to Truth.
- But to compare clear compleat Ideas under fieldly Names.
- 7. The true Method of advancing Knowledge, is by confidering our abstract Ideas.
- 8. By which Morality also may be made clearer.
- But Knowledge of Bodies is to be improved only by Experience.
- 10. This may procure us Convenience, not Science.
- 11. We are fitted for moral Knowledge, and natural Improvements.

12. But must beware of Hypotheses and wrong Principles.

13. The true use of Hypotheses.

14. Clear and distinct Ideas with settled Names, and the finding of those which show their Agreement or Difagreement, are the ways to enlarge our Knowledge.

15. Mathematicks an Instance

CHAP. XIII.

Some other Considerations concerning our Knowledge.

SECT.

1. Our Knowledge partly neceffary, partly voluntary.

2. The Application voluntary; but we know as things are, not as we pleafe.

3. Inflances in Number.

CHAP. XIV.

S E C T.

1. Our Knowledge being short, we want something else.

2. What use to be made of this twilight Estate.

3. Judgment supplies the want

of Knowledge.

Judgment is the presuming Things to be so, without perceiving it.

C H A P. XV.

Of Probability.

SECT.

1. Probability is the Appearance of Agreement upon fallible Proofs.

2. It is to supply the want of Knowledge.

3. Being that which makes us presume things to be true, before we know 'em to be fo.

4. The Grounds of Probability are two; Conformity with our own Experience, or the Testimony of others Experi-

5. In this all the Agreements, pro and con, ought to le examined, before we come to a Judgment.

6. They being capable of great

Variety.

C H A P. XVI.

Of the Degrees of Assent.

SECT.

1. Our Affent ought to be regulated by the Grounds of Probability.

2. These cannot always be all actually in View, and then we must content our selves with the Remembrance that we once saw Ground for such a Degree of Assent.

3. The ill Consequence of this, if our former Judgment were

not rightly made.

4. The right use of it is mutual Charity and Forbearance.

5. Probability is either of Matter of Fact or Speculation.

6. The Concurrent Experience of all other Men with ours, produces Assurance approaching to Knowledge.

7. Unquestionable Testimony and Experience, for the most part,

produce Confidence.

8. Fair Testimony, and the Natare

ture of the thing indifferent, produces also confident Belief.

9. Experience and Testimonies clashing, infinitely vary the

Degrees of Probability. 10. Traditional Testimonies, the farther removed, the less

their Proof.

11. Yet History is of great Use. 12. In things which Sense can-

not discover, Analogy is the great Rule of Probability.

13. One Case where contrary Experience lessens not the

Testimony.

14. The bare Testimony of Revelation is the highest Certainty.

C H A P. XVII.

Of Reason.

SECT.

1. Various Significations of the word Reason.

2. Wherein Reasoning consists.

3. Its four Parts.

4. Syllogism not the great Instrument of Reason.

5. Helps little in Demonstration, less in Probability.

6. Serves not to increase our Knowledge, but fence with it.

7. Other helps should be sought.

8. We reason about Particulars. 9. First, Reason fails us for

want of Ideas. 10. Secondly, Because of objeure

and imperfect Ideas. 11. Thirdly, for want of intermediate Ideas.

12. Fourthly, Because of wrong Principles.

13. Fifthly, Because of doubtful Terms.

14. Our highest Degree of Knowledge is intuitive without reasoning.

15. The next is Demonstration

by reasoning.

16. To supply the Narrowness of this, we have nothing but Judgment uton probable Reasoning.

17. Intuition, Demonstration,

Judgment.

18. Consequences of Words, and Consequences of Ideas.

19. Four forts of Arguments: First, Ad Verecundiam.

20. Secondly, Ad Ignorantiam.

21. Thirdly, Ad Hominem.

22. Fourthly, Ad Judicium.

23. Above, contrary, and according to Reason.

24. Reason and Faith not opposite.

CHAP. XVIII.

Of Faith and Reason, and their distinct Provinces.

S E C Ť.

1. Necessary to know their Boundaries.

2. Faith and Reason what, as contra-distinguished.

3. No new simple Idea can be convey'd by traditional Revelation.

4. Traditional Revelation may make us know Propositions knowable also by Reason, but not with the same Certainty that Reason doth.

5. Revelation cannot be admitted against the clear Evidence of Reason.

6. Traditional Revelation much less.

7. Things above Reason.

- 8. Or not contrary to Reason, if revealed, are Matter of Faith.
- Revelation, in Matters where Reason cannot judge, or but probably, ought to be hearkened to.

10. In matters where Reason can afford certain Knowledge, that is to be hearkened to.

11. If the Boundaries be not fet between Faith and Reafon, no Euthusiasm, or Extravagancy in Religion, can be contradicted.

CHAP. XIX.

Of Enthusiasm.

SECT.

- 1. Love of Truth necessary.
- 2. A Forwardness to distate, whence.
- 3. Force of Enthusiasm.
- 4. Reason and Revelation.
- 5. Rije of Enthufiasm.
- 6, 7. Enthusiasm.
- 8, 9. Enthustasm mistaken for seeing and feeling.
- 10. Enthusiasm how to be discovered.
- 11. Enthusiasm fails of Evidence, that the Proposition is from GOD.
- 12. Firmness of Persuasion, no Proof that any Proposition is from GOD.
- 13. Light in the Mind. what.
- 14. Revelation must be judged by Reason.
- 15. Belief no Proof of Revela-

CHAP. XX.

CHAP. I.

Of Words, or Language in General,

only with an Inclination, and under a sounds.

with those of his own Kind; but furnished him also with Language, which was to be the great Instrument, and common Tye of Society. Man therefore had by Nature his Organs so fashioned, as to be fit to frame Articulate Sounds, which we call Words. But this was not enough to produce Language; for Parrots, and several other Birds, will be taught to make articulate Sounds distinct enough, which yet, by no means, are capable of Language.

§. 2. Besides articulate Sounds therefore, it To make them was farther necessary, that he should be able to Signs of Ideas. use these Sounds, as Signs of internal Conceptions;

and to make them stand as Marks for the *Ideas* within his own Mind, whereby they might be made known to others, and the Thoughts of Mens Minds be convey'd from one to another.

Words fo useful as they ought to be. It is not al Signs. enough for the Persection of Language, that Sounds can be made Signs of Ideas' unless those Signs can be so made use of, as to comprehend several particular Things: For the Multiplication of Words would have perplexed their Use, had every particular thing need of a distinct Name to be Vol. II.

fignified by. To remedy this Inconvenience, Language had yet a farther Improvement in the Use of general Terms, whereby one Word was made to mark a Multitude of particular Existences: Which advantageous use of Sounds was obtained only by the Difference of the *Ideas* they were made Signs of. Those Names becoming general, which are made to stand for general *Ideas*, and those remaining particular, where the *Ideas* they are used for are particular.

To make general Signs.

4. Besides these Names which stand for Ideas, there be other Words which Men make use of, not to signify any Idea, but the want or absence of some Ideas simple or complex, or all Ideas together; such as are Niliti in Latin, and in English, Ignorance and Barrenness. All which negative or privative Words, cannot be said properly to belong to, or signify no Ideas; For then they would be perfectly insignificant Sounds: but they

relate to positive Ideas, and fignify their Absence.

Words ultimately deriwed from fuch as fignify fenfible Ideas. 6.5. It may also lead us a little towards the Original of all our Notions and Knowledge, if we remark, how great a Dependance our Words have on common sensible Ideas; and how those which are made use of to stand for Actions and Notions quite removed from Sense, have their

rise from thence, and from obvious sensible Ideas are transferred to more abstruse Significations, and made to stand for Ideas that come not under the Cognizance of our Senses; v.g. to Imagine, Apprehend, Comprehend, Adhere, Conceive, Instill, Disgust, Disturbance, Tranquility, Ec. are all Words saken from the Operations of sensible Things, and applyed to certain Modes of Thinking. Spirit, in its primary Significa-tion is Breath; Argel, a Messenger: And I doubt not, but if we could trace them to their Sources, we should find, in all Languages, the Names which stand for Things that fall not under our Senses, to have had their first rife from sensible Ideas. By which we may give fome kind of guess, what kind of Notions they were, and whence derived, which filled their Minds, who were the first Beginners of Languages; and how Nature even in the naming of Things, unawares suggested to Men the Originals and Principles of all their Knowledge: Whilft to give Names, that might make known to others any Opperations they felt in themselves, or any other Ideas, that came not under their Senses, they were fain to borrow Words from ordinary known Ideas of Senfation, by that means to make others the more easily to conceive those Operations they

experimented in themselves, which made no cutward sensible Appearances; and then when they had got known and agreed Names, to signify those internal Operations of their own Minds, they were sufficiently surnished to make known by Words, all their other *Ideas*; since they could consist of nothing, but either of outward sensible Perceptions, or of the inward Operations of their Minds about them; we having, as has been proved, no *Ideas* at all, but what originally come either from sensible Objects without, or what we feel within ourselves, from the inward Workings of our own Spirits, of which we are conscious to ourselves within.

§ 6. But to understand better the Use and Force of Language, as subservient to Instruction Distribution.

and Knowledge, it will be convenient to confider,

First, To what it is that Names, in the use of Language,

are immediately applied.

Secondly, Since all (except proper) Names are general, and fo stand not particularly for this or that single Thing; but for Sorts and Ranks of Things, it will be necessary to consider, in the next Place, what the Sorts and Kinds, or, if you rather like the Latin Names, what the Species and Genera of Things are; wherein they consist; and how they come to be made. These being (as they ought) well looked into, we shall the better come to find the right use of Words; the natural Advantages and Defects of Language; and the Remedies that ought to be used, to avoid the Inconveniences of Obscurity or Uncertainty in the Signification of Words, without which, it is impossible to Discourse with any clearness, or order, concerning Knowledge: Which being conversant about Propositions, and those most commonly universal ones, has greater Connection with Words, than perhaps is suspected.

These Considerations therefore, shall be the matter of the

following Chapters.

CHAP. II.

Of the Signification of Words.

Wo: ds are forfible Signs necessary for Communication. §. 1. AN, though he have great Variety of Thoughts, and fuch, from which others, as well as himself, might receive Profit and Delight; yet they are all within his own Breath, invisible, and hidden from

others, nor can of themselves be made appear. The Comfort and Advantage of Society, not being to be had without Communication of Thoughts, it was necessary, that Man should find out some external sensible Signs, whereby those invisible Ideas, which his Thoughts are made up of, might be made known to others. For this purpose, nothing was fo fit, either for Plenty, or Quickness, as those articulate Sounds, which with fo much Ease and Variety, he found himself able to make. Thus we may conceive how Words, which were by Nature so well adapted to that purpose, come to be made Use of by Men, as the Signs of their Ideas; not by any natural Connection, that there is between particular articulate Sounds and certain Ideas, for then there would be but one Language amongst all Men; but by a voluntary Imposition, whereby fuch a Word is made arbitrarily the Mark of fuch an *Idea*. The use then of Words, is to be sensible Marks of Ideas; and the Idvas they stand for, are their proper and immediate Signification.

Words are the fonfible Signs of his Ideas who uses them.

9. 2. The use Men have of these Marks, being either to record their own Thoughts for the Assistance of their own Memory; or, as it were, to bring out their Ideas, and lay them before the view of others: Words in their primary or

immediate Signification, fland for nothing, but the Ideas in the Mind of him that uses them, how imperfectly soever, or carelessy those Ideas are collected from the Things, which they are supposed to represent. When a Man speaks to another, it is, that he may be understood; and the end of Speech io, that those Sounds, as Marks, may make known his Ideas to the Hearer. That then which Words are the Marks of, are the Ideas of the Speaker: Nor can any one apply them, as Marks, immediately to any thing else, but the Ideas, that he himself

himself hath. For this would be to make them Signs of his own Conceptions, and yet apply them to other Ideas; which would be to make them Signs, and not Signs of his Ideas at the same time; and so in effect, to have no Signification at Words being voluntary Signs, they cannot be voluntary Signs imposed by him on Things he knows not. That would be to make them Signs of nothing, Sounds without Signification. A Man cannot make his Words the Signs either of Qualities in Things, or of Conceptions in the Mind of another, whereof he has none in his own. 'Till he has some Ideas of his own, he cannot suppose them to correspond with the Conceptions of another Man; nor can he use any Signs for them: For thus they would be the Signs of he knows not what, which is in Truth to be the Signs of nothing. But when he represents to himself other Mens Ideas, by some of his own, if he confent to give them the same Names, that other Men do, 'tis still to his own Ideas; to Ideas that he has, and not to Ideas that he has not.

6. 3. This is so necessary in the Use of Language, that in this respect, the Knowing, and the Ignorant; the Learned, and Unlearned, use the Words they speak (with any meaning) all alike.

Words are the fenfible Sizes of his Ideas who when them.

They, in every Man's Mouth, stand for the Ideas he has, and which he would express by them. A Child having taken Notice of nothing in the Metal he hears called . Gold, but the bright shining yellow Colour, he applies the Word Gold only to his own Idea of that Colour, and nothing else; and therefore calls the same Colour in a Peacock's Tail, Gold. Another that hath better observed, adds to shining yellow, great Weight; and then the Sound Gold, when he Uses it, stands for a complex Idea of a shining Yellow and very weighty Substance. Another adds to those Qualities, Fusibility: And then the Word Gold to him fignifies a Body, bright, yellow, fufible, and very heavy. Another adds Malleability. Each of these uses equally the Word Gold, when they have Occasion to express the Idea, which they have apply'd it to: But it is evident, that each can apply it only to his own Idea; nor can he make it stand, as a Sign of fuch a complex Idea, as he has not.

§. 4. But though Words, as they are used by Men, can properly and immediately signify nothing but the *Ideas*, that are in the Mind of the Speaker; yet they in their Thoughts give them a fecret Reference to two other Things.

Words from Recordly reford.
Thigh, to the Indeas is a been bloom.

First, They suppose their Words to be Marks of the Ideas in the Minds also of other Men, with whom they communicate: For else they should talk in vain, and could not be understood, if the Sounds they applied to one Idea, were such, as by the Hearer were applied to another, which is to speak two Languages. But in this, Men stand not usually to examine, whether the Idea they and those they Discourse with have in their Minds, be the same: But think it enough, that they use the Word, as they imagine, in the common Acceptation of that Language; in which they suppose, that the Idea, they make it a Sign of, is precisely the same, to which the Understanding Men of that Country apply that Name.

6. 5. Secondly, Because Men would not be thought to talk barely of their own Imaginations, Secondly, To the Reality of but of Things as really they are; therefore they Things. often suppose their Words to stand also for the Reality of Things. But this relating more particularly to Substances, and their Names, as perhaps the former does to simple Ideas and Modes, we shall speak of these two different ways of applying Words more at large, when we come to treat of the Names of mixed Modes, and Substances, in particular: Tho' give me leave here to fay, that it is a perverting the use of Words, and brings unavoidable Obscurity and Confusion into their Signification, whenever we make them stand for any thing, but those Ideas we have in our own Minds. §. 6. Concerning Words also, it is farther to be

Words by use considered: First, that they being immediately the Signs of Mens Ideas; and, by that means, the Ideas.

Instruments whereby Men communicate their Conceptions, and express to one another those Thoughts and Imaginations, they have within their own Breasts, there comes by constant use, to be such a Connection between certain Sounds, and the Ideas they stand for, that the Names heard, almost as readily excite certain Ideas, as if the Objects themselves, which are apt to produce them, did actually affect the Senses. Which is manifestly so in all obvious senses

Words often used without Signification. Without Signification. Which we will be without Signification. Without Signification of Words, are Ideas in the Mind of the Speaker; yet because by familiar use from our Cradles, we come to learn certain articulate Sounds very persectly, and have them readily on our Tongues, and always at hand in our Memories; but yet

fible Qualities; and in all Substances, that frequently, and

familiarly occur to us.

arc

are not always careful to examine, or fettle their Significations perfectly, it often happens that Men, even when they would apply themselves to an attentive Consideration, do set their Thoughts more on Words, than Things. Nay, because Words are many of them learned before the Ideas are known for which they stand: Therefore some, not only Children, but Men, speak several Words, no otherwise than Parrots do, only because they have learned them, and have been accustomed to those Sounds. But so far as Words are of Use and Signisication, so far is there a constant Connection between the Sound and the Idea; and a Defignation, that the one fland for the other: without which Application of them, they are nothing but fo much infignificant Noise.

6. 8. Words by long and familiar use, as has been said, come to excite in Men certain Ideas, fo constantly and readily, that they are apt to fration persuppose a natural Connexion between them. feelly arbitra-

Their Signi-

But that they signific only Mens peculiar Ideas, and that by a perfectly arbitrary Imposition, is evident, in that they often fail to excite in others (even that use the same Language) the same Ideas, we take them to be the Signs of: And every Man has fo inviolable a Liberty, to make Words stand for what Ideas he pleases, that no one hath the Power to make others have the fame Ideas in their Minds. that he has, when they use the same Words that he does. And therefore the great Augustus himself, in the Possession of that Power which ruled the World, acknowledged, he could not make a new Latin Word: which was as much as to fay, That he could not arbitrarily appoint what Idea any Sound should be a Sign of, in the Mouths and common Language of his Subjects. 'Tis true, common use, by a tacit Consent, appropriates certain Sounds to certain Ideas in all Languages, which fo far limits the Signification of that Sound, that unless a Man applies it to the same Idea, he does not speak properly: And let me add, that unless a Man's Words excite the same Ideas in the Hearer, which he makes them stand for in speaking, he does not speak intelligibly. Bur whatever be the confequence of any Man's using of Words differently, either from their general Meaning, or the particular Sense of the Person to whom he addresses them, this is certain, their Signification, in his use of them, is limited to his Ideas, and they can be Signs of nothing elfc.

CHAP. III.

Of General Terms.

The greatest part of Words general. L L Things that exist being Particulars, it may perhaps be thought reasonable that Words, which ought to be conformed to Things, should be so too, I mean in their Signification: but yet we

find the quite contrary. The far greatest part of Words, that make all Languages, are general Terms: which has not been the Effect of Neglect, or Chance, but of Reason, and Necessity.

and incecting,

6. 1. First, It is impossible that every partilar Thing should have a distinct peculiar Name. For every particular Thing For the Signification and Use of Words, dependto bave a ing on that Connection, which the Mind makes Name is imbetween its Ideas and the Sounds it uses as po/fibite. Signs of them, it is necessary, in the Application of Names to Things, that the Mind should have distinct Ideas of the Things, and retain also the particular Name that belongs to every one, with its peculiar Approbation to that Idea. But it is beyond the Power of Human Capacity to frame and retain distinct Ideas of all the particular Things we meet with: Every Bird, and Beast Men saw; every Tree, and Plant that affected the Senses, could not find a place in the most capacious Understanding. If it be looked on as an Instance of a prodigious Memory, That some Generals have been able to call every Soldier in their Army, by his proper Name: We may cafily find a Reafon, why Men have never attempted to give Names to each Sheep in their Flock, or Crow that flies over their Heads; much less to call every Leaf of Plants, or Grain of Sand that came in their way, by a peculiar Name.

And uflift.

6. 3. Secondly, If it were possible, it would get be uffelest; because it would not serve to the chief End of Language. Men would in vain heap up Names of particular Things, that would not serve them to communicate their Thoughts. Men learn Names, and use them in Talk with others, only that they may be understood: which is then only done, when by Use or Consent, the Sound I

nake

make by the Organs of Speech, excites in another Man's Mind, who hears it, the *Idea* I apply it to in mine, when If peak it. This cannot be done by Names, apply'd to particular Things, whereof I alone having the *Ideas* in my Mind, the Names of them could not be fignificant, or intelligible to another, who was not acquainted with all those very particular Things, which

had fallen under my Notice. 6.4. Thirdly, But yet granting this also feasible; (which I think is not,) yet a distinct Name for every particular Thing would not be of any great Uje for the Improvement of Knowledge: which though founded in particular Things, enlarges it felf by general Views; to which, Things reduced into Sorts under general Names, are properly subservient. These, with the Names belonging to them, come within some compass, and do not multiply every Moment, beyond what either the Mind can contain, or Use requires. And therefore in these, Men have, for the most part, stopped; but yet not so, as to hinder themselves from distinguishing particular Things, by appropriated Names, where Convenience demands it. And therefore in their own Species, which they have most to do with, and wherein they have often occasion to mention particular Persons, they make use of proper Names; and their distinct individuals have distinct Denominations.

6. 5. Besides Persons, Countries also, Cities, Rivers, Mountains and other the like Distinctions of Place, have usually found peculiar Names, and that for the same Reason; they being such as

What Things have proper Names.

that for the same Reason; they being such as Names. Men have often an Occasion to mark particularly, and, as it were, set before others in their Discourses with them. And I doubt not but if we had Reason to mention particular Horses, as often as we have to mention particular Men, we should have proper Names for the one, as familiar as for the other; and Bucephalus would be a Word as much in Use, as Alexander. And therefore we see that amongst Jockeys, Horses have their proper Names to be known and distinguished by, as commonly as their Servants: Because amongst them, there is often occasion to mention this or that particular Horse, when he is out of Sight.

6.6. The next thing to be confidered is, how general Words come to be made. For fince all Things that exist are only particulars, how come we by general Terms, or where find we those general Natures they are supposed to stand for?

How general Words are made.

Words become general, by being made the Signs of general

Ideas:

Ideas: And Ideas become general, by separating from them the Circumstances of Time, and Place, and any other Ideas, that may determine them to this or that particular Existence. By this way of Abstraction they are made capable of representing more Individuals than one; each of which, having in it a Conformity to that Abstract Idea, is (as we call it) of that fort.

- 6. 7. But to deduce this a little more distinctly, it will not perhaps be amiss to trace our Notions, and Names, from their beginning, and observe by what degrees we proceed, and by what tleps we enlarge our Ideas from our first Infancy. There is nothing more evident, than that the Ideas of the Persons Children converse with, (to Instance in them alone) are like the Perfors themselves, only particular. The Ideas of the Nurse, and the Mother, are well framed in their Minds: and, like Pictures of them there, represent only those Individuals. The Names they first gave to them, are confined to these Individuals; and the Names of Nurse and Mamma, the Child uses, determine themselves to those Persons. Afterwards, when Time and a larger Acquaintance has made them observe, that there are a great many other Things in the World, that in some common Agreements of Shape, and several other Qualities, resemble their Father and Mother, and those Persons they have been used to, they frame an Idea, which they find those many Particulars do partake in; and to that they give, with others, the Name Man for Example. And thus they come to have a general Name, and a general Idea. Wherein they make nothing new, but only leave out of the complex Idea they had of Pcter and James, Mary and Fone, that which is peculiar to each, and retain only what is common to them all.
- §. 8. By the same way, that they come by the general Name and Idea of Man, they easily Advance to more general Names and Notions. For observing, that several Things that differ from their Idea of Man, and cannot therefore be comprehended under that Name, have yet certain Qualities, wherein they agree with Man, by retaining only those Qualities, and uniting them into one Idea, they have again another and a more general Idea; to which having given a Name, they make a Term of a more comprehensive Extension: Which new Idea is made, not by any new Addirion, but only, as before, by leaving out the Shape, and some other Properties signified by the Name Man, and retaining only a Body, with Life, Sense, and spontaneous Motion, comprehended under the Name Animal.

6. 9. That this is the Way, whereby Men first formed general Ideas, and general Names to them, I think, is so evident, that there needs no other Proof of it, but the considering of a Man's self, or others, and the ordinary Proceedings of their Minds in Knowledge: And he that thinks

General Natures are nothing but abfract Ideas.

general Natures or Notions, are anything else but such abaract and partial Ideas of more complex ones, taken at first from particular Existences, will, I fear, be at a Loss where to find For let any one reflect, and then tell me, wherein does his Idea of Man, differ from that of Pet r and Paul; or his Idea of Herse from that of Bucephalus, but in the leaving out fomething that is peculiar to each Individu 1; and retaining fo much of those particular complex Ideas of several particular Existences, as they are found to agree in? Of the complex Ideas, fignified by the Names Man, and Horfe, leaving out but those Particulars wherein they differ, and retaining only those wherein they agree, and of those making a new distinct complex Idea, and giving the Name Animal to it, one has a more general Term, that comprehends, with Man, feveral other Creatures. Leave out of the Idea of Animai, Sense and spontaneous Motion, and the remaining complex Idea, made up of the remaining simple ones of Body, Life and Nourishment, becomes a more general one, under the more comprehensive Term, Vivens. And not to dwell longer upon this Particular, fo evident in itself, by the same way the Mind proceeds to Body, Substance, and at last to Being, Thing, and fuch universal Terms, which stand for any of our Ideas whatfoever. To conclude, this whole Mystery of Genera and Stecies, which make fuch a noise in the Schools, and are, with Justice, so little regarded out of them, is nothing else but abitract Ideas, more or less comprehensive, with Names annexed to them. In all which, this is constant and unvariable. That every more general Term, stands for such an Idea, as is but a part of any of those contained under it.

6. 10. This may shew us the Reason, why, in the defining of Words, which is nothing but declaring their Signification, we make use of the Genus, or next general Word that comprehends it. Which is not out of necessity, but only to save the

Why the Genus is ordinarily made use of in Definitions.

labour of enumerating the several simple Ideas, which the next general Word, or Genus, stands for; or, perhaps, sometimes the shame of not being able to do it. But though defining by Genus and Differentia, (I crave leave to use these Terms of Art

theugh

though originally Latin, fince they most properly fuit those Notions they are apply'd to;) I fay, though defining by the Genus be the shortest way; yet, I think, it may be doubted, whether It be the best. This I am fure, it is not the only, and so not absolutely necessary. For Definition being nothing but making another understand by Words, what Idea the Term defined stands for, a Definition is best made by enumerating those simple Ideas that are combined in the Signification of the Term defined: and if instead of such an enumeration. Men have accustomed themselves to use the next general Term, it has not been out of necessity, or for greater clearness; but for quickness and disparch sake. For, I think, that to one who defired to know what Idea the Word Man Hood for; if it should be faid, that Man was a folid extended Substance, having Life, Sense, spontaneous Motion, and the Faculty of Reasoning, I doubt not but the meaning of the Term Man would be as well understood, and the Idea it stands for, be at least as clearly made known, as when it is defined to be a rational Animal; which by the feveral Definitions of Animal, Vivens, and Corpus, resolves itself into those enumerated Ideas. I have in explaining the Term Man, followed here the ordinary Definition of the Schools; which though, perhaps, not the most exact, yet serves well enough to my present purpose. And one may in this Instance, see what gave, occasion to the Rule, that a Definition must confist of Genus and Differentia: and it fuffices to shew us the little Necessity there is of such a Rule, or advantage in the strict observing of it. For Definitions, as has been faid, being only the explaining of one Word, by feveral others, so that the meaning or Idea it stands for, may be certainly known; Languages are not always fo made, according to the Rules of Logick, that every Term can have its Signification exactly and clearly expressed by two others. Experience fufficiently fatisfies us to the contrary; or else those who have made this Rule, have done ill that they have given us fo few Definitions conformable to it. But of Definitions, more in the next Chapter.

General and Univerfal are Creatures of the Underflanding. 6. 11. To return to general Words, it is plain, by what has been faid, That General and Univerfal, belong not to the real existence of Things; but are the Inventions and Creatures of the Understanding, made by it for its own use, and concern only Signs, whether Words or Ideas. Words are general, as has been said, when used for

Signs of general Ideas; and so are applicable indifferently to many

many particular Things; and *Ideas* are general, when they are fet up as the Representatives of many particular Things: But Universality belongs not to things themselves, which are all of them particular in their Existence, even those Words, and *Ideas*, which in their Signification, are general. When therefore we quit Particulars, the Generals that rest, are only Creatures of our own making, their general Nature being nothing but the Capacity they are put into by the Understanding, of signifying or representing many Particulars. For the Signification they have, is nothing but a Relation, that by the Mind of Man is added to them, (a)

J. 12.

(a) Against this the Bishop of Worcester objects, and our Author * answers as solloweth: However, faith the Bishop, the abstracted Ideas are the Work of the Mind, as appears by an Instance produced of the Essence of the Sun being in one single Individual: In swhich case it is grant-

* In his first Letter. p. 189, &c.

In steries case it is granted, That the Idea may be so abstracted, that more Suns might agree in it, and it is as much a fort, as if there were as many Suns as there are Stars. So that here we have a real Essence subshining in one Individual, but capable of being multiply'd into more, and the same Essence remaining. But in this one Sun there is a real Essence, and not a mere nominal, or abstracted Essence: But suppose there were more Suns; would not each of 'em have the real Essence of the Sun? For what is it makes the Second Sun, but having the same real Essence with the First? If it were but a nominal Essence, then the Se-

cond would have nothing but the Name.

This, as I understand it, replies Mr. Locke, is to prove, that the abstract general Essence of any fort of Things, or things of the same Denomination, v. g. of Man or Marizoles, hath a real Being out of the Understanding; which, I consess, I am not able to conceive. Your Lordship's Proof here brought out of my Essay, concerning the Sun, I humbly conceive, will not reach it; because what is said there, does not at all concern the real but nominal Effence, as is evident from hence, that the Idea I speak of there, is a complex Idea; but we have no complex Idea of the internal Constitution or real Essence of the Sun. Befides, I fay exprefly, That our Dillinguishing Substances into Species, by Names, is not at all founded on their real Essences. So that the Sun being one of the Substances, I cannot, in the Place quoted by your Lordinip, be supposed to mean by Effence of the Sun, the real Essence of the Sun, unless I had so expressed. But all this Argument will be at an end, when your Lordship shall have explained what you mean by these Words, true Sun. In my Sense of 'em, any thing will be a true Sun to which the name Sun may be truly and properly apply'd, and to that Substance or Thing, the name Sun may be truly and properly apply'd, which has united in

Abstrast Ideas
are the Effences
of the Genera
and Species.

§. 12. The next thing therefore to be considered, is, What kind of Signification it is, that General Words have. For as it is evident, that they do not fignify barely one particular thing; for then they would not be general Terms, but

proper Names; so on the other side, 'tis as evident, they do not signify a Plurality; for Man and Men would then signify

it that Combination of fensible Qualities, by which any thing else, that is called Sun is distinguished from other Substances, i. e. by the nominal Essence: And thus our Sun is denominated and distinguished from a fixed Star, not by a real Essence that we do not know (for if we did, tis possible we should find the real Essence or Constitution of one of the sixed Stars to be the same with that of our Sun) but by a complex Idea of sensible Qualities co-existing, which, wherever they are sound, make a true Sun. And thus I crave leave to answer your Lordship's Question: For what is it makes the Second Sun to be a true Sun, but having the same real Essence with the First? If it were but a nominal Essence, then the Second would have nothing but the Name.

I humply conceive, if it had the nominal Effence, it would have fomething besides the Name, viz. That nominal Essence which is fufficient to denominate it truly a Sun, or to make it be a true Sun, tho' we know nothing of that real Effence whereon that nominal one depends; your Lordhip will then argue, That that real Effence is in the Second Sun, and makes the Second Sun. I grant it, when the Second Sun comes to exist, so as to be perceived by us to have all the Ideas contained in our complex Idea, i. e. in our nominal Effence of a Sun, For should it be true (as is now believed by Astronomers) that the real Essence of the Sun were in any of the fixed Stars, yet fuch a Star could not for that be by us called a Sun, whillt it answers not our complex Idea, or nominal Effence of a Sun. But how far that will prove, That the Effectes of things, as they are knowable by us, have a Reality in 'em diainct from that of abstract Ideas in the Mind, which are merely Creatures of the Mind, I do not fee; and we shall farther enquire, in confidering your Lordship's following Words. Therefore, fay you, there must be a real Essence in every Individual of the same Kind. Yes, and I beg leave of your Lordship to say, of a different Kind too. For that alm is it which makes it to be what it is.

That every Individual Substance has a real, internal, individual Constitution, i. e. a real Essence, that makes it to be what it is, I grant. Upon this your Lordship says, Peter, James and John are all true and real Men. Ans. Without doubt, supposing them to be Mich, they are true and real Men, i. e. supposing the Names of that Species belongs to them. And so three Bobaques are all true and real Bobaques, supposing the Name of that Species of Animals

belongs to them.

the same; and the Distinction of Numbers (as Grammarians call 'em) would be superfluous and useless. That then which general Words signify, is a fort of Things; and each of them does that, by being a Sign of an abstract Idea in the Mind, to which Idea, as things existing are found to agree, so they come to be ranked under that Name; or, which is all one, be of that fort. Whereby it is evident that the Essences of the Sorts, (or if the Latin Word pleases better) Species of Things, are nothing else but these abstract Ideas. For the having the Essence of any Species, being that which makes any thing

For I befeech your Lordship to consider, Whether in your way of arguing, by naming 'em Peter, James and John, Names familiar to us, as appropriated to Individuals of the Species Man, your Lordfhip does not first suppose them Men, and then very fafely ask, Whether they be not all true and real Men? But if I should ask your Lordship, Whether Weaveena, Guckery and Conspeda, were true and real Men or no? Your Lordship would not be able to tell me, till I have pointed out to your Lordship the Individuals called by those Names, your Lordship by examining whether they had in em those sensible Qualities, which your Lordship has combined into that camplex Idea, to which you give the Specifick Name Man, determined them all, or some of them to be of the Species which you call Man, and so to be true and real Man; which when your Lordfhip has determined, 'tis plain you did it by that which is only the nominal Effence, as not knowing the real one. But your Lordship farther asks, What is it makes Peter, James and Join real Men? Is it the attributing the general Name to 'em? No certainly; but that the true and real Effence of a Man is in every one of them.

If when your Lordship asks, What makes them Men? Your Lordship used the Word making in the proper Sense for the efficient Cause, and in that Sense it were true, that the Essence of a Man, i. e. the Specifick Essence of that Specifick Essence had a Reality beyond that of being only a generaly abstract Idea in the Mind. But when it is said, That it is the true and real Essence of a Man in every one of them that makes Peter, James and John true and real Men, the true and real meaning of those Words is no more but that the Essence of that Species, i. e. the Properties answering the complex abstract Idea, to which the Specifick Name is given, being found in them that makes them be properly and truly called Men, or is the Reason why they are called Men. Your Lordship adds, And we must

be as certain of this, as we are that we are Men.

How, I befeech your Lordship, are we certain, that they are Men, but only by our Senses, finding those Properties in them which answer the abstract complex Idea, which is in our Minds of the Speci-

thing to be of that Species, and the Conformity to the Idea to which the Name is annexed, being that which gives a right to that Name, the having the Essence, and the having that Conformity, must need be the same thing: Since to be of any Species, and to have a right to the Name of that Species, is all one. As for Example, to be a Man, or of the Species Man, and to have right to the Name Man, is the same thing. Again, to be a Man, or of the Species Man, and have the Essence, of a Man, is the same thing.

fick Idea, to which we have annexed the Specifick Name Man? This I take to be the true meaning of what your Lordship says in the next Words, viz They take their Denomination of being Men, from that common Nature or Essence which is in them; and I am apt to think, these Words will not hold true in any other Sense.

Your Lordship's sourth Inserence begins thus: I hat the general Idea is not made from the simple Ideas by the mere Act of the Mind ab-fracting from Circumstances, but from Reason and Consideration of the

Nature of Things.

I thought, my Lord, That Reason and Consideration had been Asts of the Mind, mere Asts of the Mind, when any thing was done by 'em. Your Lordship gives a Reason for it, viz. For when we see sweral Individuals that have the same Powers and Properties, we thence infer, That there must be something common to all, which makes them of one Kind.

I grant the Inference to be true; but must beg leave to dony that this proves, That the general Idea the Name is annoxed to, is not made by the Mind. I have said, and it agrees with what your Lordship here says, * That ' the Mind in making its

* B. 3. C. 6. 'complex Ideas of Subitances, only follows Nature, § 28, 29. 'and puts no Ideas together, which are not supposed to have an Union in Nature; no body joins the Voice of a Sheep with the Shape of an Horse; nor the Colour of

Lead with the weight and Fixedness of Gold, to be the complex Ideas of any real Substances; unless he has a mind to fill his Head with Chimera's, and his Discourses with unintelligible Words.

* Men observing certain Qualities always joined and existing together, therein copy'd Nature, and of Ideas so united, made their complex ones of Substances, &c." Which is very little different from what your Lordship here says, That 'tis from our Observation of Individuals, that we come to infer, That there is something common to them all. But I do not see how it will thence sollow, that the General or Specifick Idea is not made by the mere Act of the Mind. No, says your Lordship, There is something common to them all, which makes them of one Kind; and if the difference of

This

Kinds be real, that which makes them all of one Kind must not be a Nominal, but real Essence.

thing. Now fince nothing can be a Man, or have a right to the Name Man, but what has a Conformity to the abstract Idea the Name Man stands for; nor any thing be a Man, or have a right to the Species Man, but what has the Essence of that Species; it follows, that the abstract Idea for which the Name stands, and the Essence of the Species, is one and the same. From whence it is easy to observe, that the Essences of the sorts of things, and consequently the sorting of this, is the Workmanship of the Understanding that abstracts and makes those general Ideas.

9. 13.

This may be some Objection to the Name of nominal Effence; but is, as I humbly conceive, none to the Thing defigned by it. There is an internal Constitution of Things, on which their Properties depend. This your Lordship and I are agreed of, and this we call the real Effence. There are also certain complex Ideas, or Combinations of these Properties in Mens Minds, to which they commonly annex Specifick Names, or Names of Sorts or Kinds of Things. This, I believe, your Lordship does not deny. These complex Ideas, for want of a better Name, I have called nominal Essence; how properly I will not dispute. But if any one will help me to a better Name for them, I am ready to receive it; till then, I must, to express my self, use this. Now, my Lord, Body, Life, and the Power of Reasoning, being not the real Effence of a Man, as I believe your Lordship will agree, will your Lordship say, that they are not enough to make the Thing wherein they are found, of the Kind called Man, and not of the Kind called Baboon, Because the difference of these Kinds is real? If this be not real enough to make the Thing of one Kind and not of another, I do not see how Animal rationale can be enough really to distinguish a Man from an Horse; for that is but the Nominal, not real Essence of that Kind, designed by the Name Man. And yet I suppose, every one thing is real enough to make a real difference between that and other Kinds. And if nothing will serve the turn, to MAKE things of one Kind, and not of another (which, as I have shewed, signifies no more but ranking of them under different Specifick Names) but their real, unknown Constitutions, which are the real Effences we are speaking of, I fear it would be a long while before we flould have really different Kinds of Substances, or distinct Names for them, unless we could distinguish them by these Differences, of which we have no distinct Concep-For I think it would not be readily answered me, if I should demand, wherein lies the real difference in the internal Constitution of a Stag from that of a Buck, which are each of them very well known to be of one Kind, and not of the other; and no Body questions but that the Kind whercof each of them is, are really dijferent.

They are the Workmanship of the Understanding, bave their Foundation in the Similitude of things.

6. 13. I would not here be thought to forget; much less to deny, that Nature in the Production of Things, makes feveral of them alike: there is nothing more obvious, especially in the Races of Animals, and all Things propagated by Seed. But yet, I think, we may fay, the forting of them under Names, is the Workmanship of the Understanding, taking occasion from the Similitude it observes amongst 'em to make abstract

general Ideas, and fet them up in the Mind, with Names annex'd to 'em, as Patterns or Forms, (for in that fense the word Form has a very proper Signification,) to which as particular Things existing are found to agree, so they come to be of that Species, have that Denomination, or are put into that Classis. For when we say this is a Man, that a Horse; this Justice, that Cruelty; this a Watch, that a Jack; what do we

Your Lordship farther says, And this difference doth not depend upon the complex Ideas of Substances, whereby Men arbitrarily join Modes together in their Minds. I confess, my Lord, I know not weat to say to this, because I do not know what these complex Ideas of Substances are, whereby Men arbitrarily join Modes together in their Minds. But I am apt to think there is a Millake in the Matter, by the Words that follow, which are these: For let them mistake in their Complication of Ideas, either in leaving out or putting in what doth not belong to them; and let their Ideas be what they will, the real Essence of a Man, and

an Horse, and a Tree, are just what they were.

The Mistake I spoke of, I humbly suppose is this, That Things are here taken to be distinguished by their real Essence; when by the very way of speaking of them, it is clear, That they are already dithinguished by their nominal Essences, and are so taken to be. For what, I befeech your Lordship, does your Lordship mean, when you fay, The real Effence of a Man, and an Horse, and a Tree, but that there are such Kinds already set out by the Signification of these Names, Man, Horse, Tree ? And what, I beseech your Lordship, is the Signification of each of these Specifick Names, but the complex Idea it stands for ? And that complex Idea is the nominal Effence, and nothing else. So that taking Man, as your Lordship does here, to stand for a kind or fort of Individuals, all which agree in that common complex Idea, which that Spefick Name stands for, it is certain that the real Essence of all the Individuals comprehended under the Specifick Name Man, in your use of it, would be just the same; let others leave out or put into their complex Idea of Man what they please; because the real Essence on which that unaltered complex Idea, i. e. those Properties depend, must necessarily be concluded to be the same.

we else but rank Things under different Specifick Names, as agreeing to those abstract Ideas, of which we have made those Names the Signs? And what are the Essences of those Species, set out and marked by Names, but those abstract Ideas in the mind; which are, as it were, the Bonds between particular Things that exist, and the Names they are to be ranked under? And when general Names have any Connection with particular Beings, these abstract Ideas are the Medium that unites them; so that the Essences of Species, as distinguished and denominated by us, neither are, nor can be any thing but those precise abstract Ideas we have in our Minds. And therefore the supposed real Essences of Substances, if different from

บเร

For I take it for granted, That in using the Name Man, in this place, your Lordship uses it for that complex Idea which is in your Lordship's Mind of that Species. So that your Lordship by putting it for, or substituting it in the Place of that complex Idea where you say the real Essence of it is just as it was, or the very same it was, does suppose the Idea it stands for, to be Ideally the same. For if I change the Signification of the Word Man, whereby it may not comprehend just the same Individuals which in your Lordship's Sense it does, but shut out some of those that to your Lordship are Men in your Signification of the Word Man, or take in others to which your Lordship does not allow the Name Man; I do not think you will say, that the real Essence of Man, in both these Senses is the same. And yet your Lordship seems to say so, when you say, Let Men mistake in the Complication of their Ideas, either in leaving out or putting in what doth not belong to them; and let their Ideas be what they please, the real Essence of the Individuals comprehended under the Names annexed to these Ideas, will be the same: For so, I humbly conceive, it must be put, to make out what your Lordship aims at. For as your Lordship puts it by the Name of Man, or any other Specifick Name, your Lordship seems to me to suppose, that that Name stands for, and not for the same Idea, at the same time.

For Example, my Lord, let your Lordship's Idea, to which you annex the Sign Man, be a rational Animal: Let another Man's Idea be a rational Animal of such a Shape; let a third Man's Idea be of an Animal of such a Size and Shape; leaving out Rationality; let a fourth be an Animal with a Body of such a Shape, and an immaterial Substance, with a Power of Reasoning; let a sist heave out of his Idea, an immaterial Substance. 'Tis plain every one of these will call his a Man, as well as your Lordship, and yet 'tis as plain that Man, as standing for all these distinct, complex Ideas, cannot be supposed to have the same internal Constitution, i. e. the same real Essence. The Truth is, every distinct, abstract Idea, with a

Name

our Abstract Ideas cannot be the Essences of the Species we rank Things into. For two Species may be one, as rationally, as two different Essences be the Essence of one Species: And I demand, what are the Alterations may, or may not be in a Horse or Lead, without making either of 'em to be of another Species? In determining the Species of Things by our Abstract Ideas, this is easy to resolve: but if any one will regulate himself herein, by supposed real Essences, he will, I suppose, be at a loss: and he will never be able to know when any thing precisely ceases to be of the Species of a Horse, or Lead.

Name to it, makes a real, distinct kind, whatever the real Essence

(which we know not of any of them) be.

And therefore I grant it true what your Lordship says in the next Words, And let the nominal Effence differ never fo much, the real common Essence or Nature of the several Kinds, are not at all altered by them, i. e. That our Thoughts or Ideas cannot alter the real Constitutions that are in Things that exist, there is nothing more certain. But yet 'tis true, that the Changes of Ideas to which we annex 'em, can and does alter the Signification of their Names, and thereby alter the Kinds, which by these Names we rank and fort 'em into. Your Lordship farther adds. And these real Essences are unchangeable, i. e. the internal Constitutions are unchangeable. Of what, I beseech your Lordship, are the internal Constitutions unchangeable? Not of any thing that exists, but of God alone; for they may be changed all as canly by that Hand that made 'em, as the internal Frame of a Watch. What then is it that is unchangeable? The internal Constitution, or real Essence of a Species: which, in plain English, is no more but this, whilst the same Specifick Name, v.g. of Man, Horse, or Tree, is annexed to, or made the Sign of the same abthract, complex Idea, under which I rank feveral Individuals; it is impossible but the real Constitution on which that unaltered, complex Idea, or nominal Essence depends, must be the same, i. e. in other Words, where we find all the same Properties, we have Reason to conclude there is the same real, internal Constitution from which those Properties flow.

But your Lordship proves the real Essences to be unchangeable, because God makes 'em, in those sollowing Words: For bowever there may bappen some Variety in Individuals by particular Accidents, yet the Essences of Men, and Horses, and Trees, remain always the same; because they do not depend on the Ideas of Men, but on the Will of the Creating they do not depend on the Ideas of Men, but on the Will of the Creating they do not depend on the Ideas of Men, but on the Will of the Creating they do not depend on the Ideas of Men, but on the Will of the Creating they are they do not depend on the Ideas of Men, but on the Will of the Creating they are they are

tor, who hath made several Sorts of Beings.

Tis true, the real Conflitutions or Effences of particular Things existing, do not depend on the Ideas of Men, but on the Will of the Creator; but their being ranked into Sorts, under such and such Laures, does depind, and wheely depend, on the Ideas of Men.

6. 14. Nor will any one wonder, that I say these Essences, or abstract Ideas, (which are the Measures of Name, and the Boundaries of Species) are the Workmanship of the Understanding, who considers, that at least the complex ones are often,

Each distinct abstract Idea is a distinct Esf-

in several Men different Collections of simple Ideas: and therefore that is Covetousness to one Man, which is not so to another. Nay, even in Substances, where their abstract Ideas seem to be taken from the Things themselves, they are not constantly the fame; no not in that Species, which is most familiar to us, and with which we have the most intimate Acquaintance: It has ving been more than once doubted, whether the Fætus born of a Woman were a Man, even so far, as that it hath been debated, whether it were, or were not to be nourished and baptized: which could not be, if the abstract Idea or Essence, to which the Name Man belonged, were of Nature's making; and were not the uncertain and various Collection of simple Ideas, which the Understanding puts together, and then ab-Bracting it, affixed a Name to it. So that in truth, every distinst abstract Idea, is a distinst Essence: and the Names that stand for such distinct Ideas, are the Names of things essensially different. Thus a Circle is as effentially different from an Oval, as a Sheep from a Goat: and Rain is as effentially different from Snow, as Water from Earth, that abstract Idea which is the Effence of one, being impossible to be communicated to the other. And thus any two abstract Ideas, that in any part vary one from another, with two distinct Names annexed to them, constitute two distinct forts, or, if you please, Species, as essentially different as any two the most remote or opposite in the World.

§. 15. But fince the Effences of Things are Real and nothought by fome, (and not without Reason) to mival Essence. be wholly unknown; it may not be amiss to consider the se-

veral Significations of the Word Essence.

First, Essence may be taken for the Being of any thing, whereby it is what it is. And thus the real internal, but generally in Substances, unknown Constitution of Things, whereon their discoverable Qualities depend, may be called their Essence. This is the proper original Signification of the Word, as is evident from the Formation of it; Essentia, in its primary Notarion, fignifying properly Being. And in this Sense it is still used, when we speak of the Essence of particular Things, without giving them any Name.

Secondly, The Learning and Differes of the Schools, having been much bufied about Genus and Species, the Word Effence has almost lost its primary Signification; and instead of the real Con-

fitution of things, has been almost wholly applied to the artificial Constitution of Genus and Species. 'Tis true, there is ordinarily supposed a real Constitution of the forts of Things; and 'tis past doubt, there must be some real Constitution, on which any Collection of simple Ideas co-existing, must depend. But it being evident, that Things are ranked under Names into sorts of Species, only as they agree to certain abstract Ideas, to which we have annexed those Names, the Essence of each Genus, or Sort, comes to be nothing but that abstract Idea, which the General, or Sortal (if I may have leave so to call it from Sort, as I do General from Genus) Name stands for. And this we shall find to be that which the Word Essence imports, in its most familiar use. These two sorts of Essences, I suppose, may not unfitly be termed, the one the Real, the other the Nominal Essence.

Conflant Connection between the Name and nominal Effence. Name, there is so near a Connection, that the Name of any sort of Things cannot be attributed to any particular Being, but what has this Escace, whereby it answers that abstract Idea, whereof that Name is the Sign.

Supposition
that Species
are distinguished
by their real
Essences
useless.

6.17. Concerning the real Essences of corporeal Substances, (to mention those only) there are, if I mistake not, two Opinions. The one is of those, who using the Word Essence, for they know not what, suppose a certain Number of those Essences, according to which all natural things are made, and wherein they do exactly

every one of them partake, and so become of this or that Stecies. The other, and more rational Opinion, is of those, who look on all natural things to have a real, but unknown Constitution of their insensible Parts, from which flow those sensible Qualities, which ferve us to diffinguish them one from another, according as we have Occasion to rank them into forts, under common Denominations. The former of these Opinions, which supposes these Essences, as a certain Number of Forms or Molds, wherein all natural Things that exist, are cast, and do equally partake, as I imagine, very much perplexed the Knowledge of natural Things. The frequent Productions of Monsters, in all the Species of Animals, and of Changelings, and other strange Issues of human Birth, carry with them Difficulties not possible to consist with this Hypothesis: since it is as impossible, that two things, partaking exactly of the same real Essence, Should have different Properties, as that two Figures partaking in the same real Escape of a Circle, shou'd have different Properties. Properties. But were there no other Reason against it, yet the Supposition of Essences, that cannot be known; and the making them nevertheless to be that which distinguishes the Species of things, is so wholly useless, and unserviceable to any part of our Knowledge, that that alone were sufficient to make us lay it by, and content our selves with such Essences of the Sorts of Species of Things, as come within the reach of our Knowledge; which, when seriously considered, will be sound, as I have said, to be nothing else but those abstract complex Ideas, to which we have annexed distinct General Names.

§. 18. Essences being thus distinguished into Nominal and Real, we may farther observe, that in the Species of simple Ideas and Modes, they are always the same: But in Substances, always quite different. Thus a Figure including a Space between three Lines, is the real as well as nominal Essence of a Triangle; it being not only the ab-

Real and nominal Effence, the fame in fimple Ideas and Modes, defferent in Substances.

Aract Idea to which the general Name is annexed, but the very Essentia, or Being, of the thing it self, that Foundation from which all its Properties slow, and to which they are all inseparably annexed. But it is far otherwise concerning that parcel of Matter, which makes the Ring on my Finger, wherein these two Essences are apparently different. For it is the real Constitution of its insensible Parts, on which depend all those Properties of Colour, Weight, Fusibility, Fixedness, &c. which makes it to be Gold, or gives it a right to that Name, which is therefore its nominal Essence. Since nothing can be called Gold, but what has a Conformity of Qualities to that abstract complex Idea, to which that Name is annexed. But this Distinction of Essences, belonging particularly to Substances, we shall, when we come to consider their Names, have an occasion to treat of more fully.

6.19. That fuch abstract Ideas, swith Names to Essences ingethem, as we have been speaking of, are Essences, nerable and may farther appear by what we are told concern-

ing Essences, viz. that they are all ingenerable and incorruptible. Which cannot be true of the real Constitutions of Things, which begin and perish with 'em. All things, that exist, besides their Author, are all liable to Change; especially those Things we are acquainted with, and have ranked into Bands, under distinct Names or Ensigns. Thus that which was Grass to Day, is to Morrow the Flesh of a Sheep; and within sew Days after, becomes part of a Man: In all which, and the like Changes, 'tis evident, their real Essence, i. e. that

Constitution, whereon the Properties of these several things depended, is destroy'd, and perishes with them. But Essences being taken for Ideas, established in the Mind, with Names annexed to them, they are supposed to remain steddily the fame, whatever Mutations the particular Substances are liable to. For whatever becomes of Alexander and Bucephalus, the Ideas to which Man and Horse are annexed, are supposed nevertheless to remain in the same; and so the Essences of those Species are preferved whole and undeftroy'd, whatever Changes happen to any, or all of the Individuals of those Species. By this means the Essence of a Species rests safe and intire, without the Existence of so much as one Individual of that kind. For were there now no Circle existing any where in the World, (as perhaps that Figure exists not any where exactly marked out,) vet the Idea annexed to that Name would not cease to be what it is; nor cease to be as a Pattern, to determine which of the partcular Figures we meet with, have, or have not a Right to the Name Circle, and fo to flew which of them, by having that Essence, was of that Species. And tho' there neither were, nor had been in Nature fuch a Beast as an Unicorn, nor such a Fish as a Mermaid; yet supposing those Names to tland for complex abstract Ideas, that contained no inconfishency in them; the Essence of a Mermaid is as intelligible as that of a Man; and the Idea of an Unicorn, as certain, Heddy and permanent, as that of a Horse. From what has been said, it is evident, that the Doctrine of the Immutability of Essences, proves them to be only abstract Ideas; and is founded on the Relation established between them, and certain Sounds as Signs of them; and will always be true, as long as the fame Name can have the same Signification.

Recapitulation. So conclude, this is that, which in fhort I would say, (viz.) That all the great Business of Genera and Species, and their Essences.

amounts to no more but this, That Men making abstract Ideas, and settling them in their Minds, with Names annexed to them, do thereby enable themselves to consider Things, and discourse of them, as it were in Bundles, for the easier and readier Improvement and Communication of their Knowledge, which would advance but slowly, were their Words and Thoughts consined only to Particulars,

CHAP. IV.

Of the Names of Simple Ideas.

fignify nothing immediately but the Ideas in the Mind of the Speaker, yet upon a nearer Survey, we shall find that the Names of Simple Ideas, mixed Modes, (under which I comprise Relations too,) and natural Substances, have each of them something teculiar, and different from the other. For Example:

6. 2. First, The Names of Simple Ideas, and Substances, with the abstract Ideas in the Mind, which they immediately fignify, intimate also some real Existence, from which was derived their original Pattern. But the N mes of mixed

Modes, terminate in the Idea that is in the Mind, and lead not the Thoughts any farther, as we shall see more at large in

the following Chapter.

6. 3. Secondly, The Names of Simple Ideas and Modes, signify always the real, as well as nominal Essence of their Species. But the Names of natural Substances, signify rarely, if ever, any thing but barely the nominal Essences of those Species, as we shall shew in the Chapter that treats of the Names of Substances in particular.

§. 4. Thirdly, The Names of Simple Ideas are not capable of any Definitions; the Names of all complex Ideas are. It has not, that I know,

Names of Simple Ideas, Modes, and Subflances, have each fomething peculiar.

First, Names of Simple Ideas and Substances intimate real Existence.

Secondle, Names of Simple Ideas and Modes he rify always both real and naminal Effence.

Thirdly, Names of Simple Ideas undefinable.

hitherto been taken Notice of by any Body, what Words are, and what are not capable of being defined: the want whereof is (as I am apt to think) not feldom the occasion of great wrangling and Obscurity in Mens Discourses, whilst same demand Definitions of Terms that cannot be defined; and others think, they ought to rest farisfied in an Explication made by a more general Word, and its Restriction, (or to speak in Terms of Art, by a Genus and Difference,) when even after such Desinition made according to Rule, those who hear it, have often no more a clear Conception of the meaning of the Word, than they had before. This at least, I think, that the shewing what Words are, and what are not capable of Desinitions, and wherein considerage good Desinition, is not wholly besides our present Purpose; and

perhaps, will afford fo much Light to the Nature of thefe Signs. and our Ideas, as to deserve a more particular Consideration.

9. 5. I will not here trouble my felf, to prove If all were that all Terms are not definable from that Prodefinable, gress, in infinitum, which it will visibly lead us ravould be a into, if we should allow, that all Names could be Process in infidefined. For if the Terms of one Definition, were nitum. still to be defined by another, Where at last should

we stop? But I shall from the Nature of our Ideas, and the Signification of our Words, shew, why some Names can, and

others cannot be defined, and which they are.

6. 6. I think, it is agreed, that a Definition is What a Denothing else, but the sheaving the meaning of one finition is. Word by several other not synonimous Terms, The meaning of Words being only the Ideas they are made to stand for by him that uses 'em; the meaning of any Term is

then shewed, or the Word is defined, when by other Words the Idea it is made the fign of, and annexed to in the Mind of the Speaker, is as it were represented, or set before the view of another; and thus its Signification ascertained. This is the only use and end of Definitions; and therefore the only Meafure of what is, or is not a good Definition.

6. 7. This being premified, I fay, that the Simtle Ideas Names of Simple Ideas, and those only, are incapable of being defined. The Reason whereof is why undefinable. this, That the feveral Terms of a Definition,

fignifying feveral Ideas, they can altogether by no means represent an Idea, which has no Composition at all: And therefore a Definition which is properly nothing but the shewing the meaning of one Word by feveral others not fignifying each the fame thing, can in the Names of Simple Ideas have no place.

6.8 The not observing this Difference in our Ideas, Alotion. and their Names, has produc'd that eminent trifling in the Schools, which is so easy to be observed in the Definitions they give us of some few of these Simple Ideas. For as to the greatest part of 'em, even those Masters of Definitions were fain to leave them untouched, merely by the Impossibility they found in it. What more exquisite Jargon could the Wit of Maninvent, than this Definition, The Act of a Being in Power, as far forth as in Power? which would puzzle any rational Man, to whom it was not already known by its famous Absurdity, to guess what Word is could ever be supposed to be the Explication of, If Tully asking a Dutchman what Beweeginge was, should have received this Explication in his own Language, that it was AAus Actus entis in potentia quaternus in potentia; I ask whether any one can imagine he could thereby have understood what the Word Beweeginge signified, or have guessed what Idea a Dutchman ordinarily had in his Mind, and would signify to another when he used that Sound.

6. 9. Nor have the Modern Philosophers, who have endeavoured to throw off the Jargon of the Schools, and speak intelligibly, much better fucceeded in defining Simple Ideas, whether by explaining their Causes, or any otherwise. The Atomists, who define Motion to be a Passage from one place to another, What do they more than put one synonimous Word for another? For what is Passage other than Motion? And if they were asked what Passage was, How would they better define it than by Motion? For is it not at least as proper and fignificant, to fay, Passage is a Motion from one Place to another, as to say, Motion is a Passage, &c. This is to translate, and not to define, when we change two Words of the same Signification one for another; which when one is better understood than the other, may serve to discover what Idea the unknown stands for; but is very far from a Definition, unless we will fay, every English Word in the Dictionary, is the Definition of the Latin Word it answers, and that Motion is a Definition of Motus. Nor will the successive Application of the Parts of the Superficies of one Body, to those of another, which the Cartesians give us, prove a much better Definition of Motion, when well examined.

6.10. The Ast of Perspicuous, as far forth as perspicuous, is another Peripatetick Definition of a Simple Idea; which though not more absurd than the former of Motion, yet betrays its Uselefness and Infignificancy more plainly, because Experience will eafily convince any one, that it cannot make the meaning of the Word Light (which it pretends to define) at all understood by a blind Man: but the Definition of Motion appears not at first fight so useless, because it scapes this way of Trial. For this Simple Idea, entring by the Touch as well as Sight, 'tis impossible to shew an Example of any one, who has no other way to get the Idea of Motion, but barely by the Definition of that Name. Those who tell us, that Light is a great Number of little Globules, striking brifkly on the bottom of the Eye, speak more intelligibly than the Schools: but yet these Words never fo well understood, would make the Idea, the Word Light stands for, no more known to a Man that understands it not before, than if one should tell him, that Light was nothing but a Company of little Tennis balls, which Fairies all Day long Aruck with Rackets against some Mens Foreheads, whilst they passed

passed by others. For granting this Explication of the thing to be true; yet the Idea of the Cause of Light, if we had it never fo exact, would no more give us the Idea of Light it felf, as it is fuch a particular Perception in us, than the Idea of the Figure and Motion of a sharp Piece of Steel, would give us the Idea of that Pain which it is able to cause in us. For the cause of any Senfation, and the Senfationitfelf, in all the simple Ideas of one Sense, are two Ideas; and two Ideas so different, and distant one from another, that no two can be more fo. And therefore should DesCartes's Gloubles strike never so long on the Retina of a Man, who was blind by a Gutta Serena, he would thereby never have any Idea of Light, or any thing approaching to it, tho' he understood what little Gloubles were, and what striking on another Body was, never fo well. And therefore the Cartestans very well distinguish between that Light which is the Cause of that Sensation in us, and the Idea which is produc'd in us by it, and is that which is properly Light

6. 11. Simple Ideas, as has been shewn, are on-Simple Ideas It to be got by those Impressions, Objects themnchy undefinable felves make on our Minds, by the proper Inlets farther explainappointed to each fort. If they are not received this way, all the Words in the World, made uje of to explain, or define any of their Names, will never be able to produce in us the Idea it flands for. For Words being Sounds, can produce in us no other Simple Ideas, than of those very Sounds; nor excite any in us, but by that voluntary Connection, which is known to be between 'em, and those Simple Ideas, which common Use has made 'em Signs of. He that thinks otherwise, let him try if any Wordscan give him the tafte of a Pine-Apple, and make him have the true Idea of the Relish of that celebrated delicious Fruit. So far as he is told it has a refemblance with any Taftes whereof he has the Ideas already in his Memory, imprinted there by sensible Objects, not Strangers to his Palate, so far may he approach that refemblance in his Mind. But this is not giving us that Idea by a Definition, but exciting in us other Simple Ideas, , cheir known Names ; which will be still very different from the true taste of that Fruit itself. In Light and Colours, and all other Simple Ideas, it is the same thing: For the Signification of Sounds, is not natural, but only imposed and arbitrary. And no Definition of Light, or Redness, is more fitted or able to produce either of those Ileas in us, than the Sound Light, or Red, by itself. For to hope to produce an Idea of Light, or Colour, by a Sound, however formed, is to expect that Sounds should be visible, or Colours audible; and to make the

Ears do the Office of all the other Senses. Which is all one as to fay, that we might Taste, Smell, and See by the Ears: a fort of Philosophy worthy only of Sancho Panca, who had the Faculty to fee Dulcinea by Hearfay. And therefore he that has not before received in o his Mind, by the proper Inlet, the fimple Idea which any Word stands for, can never come to know the Signification of that Word, by any other Words, or Sounds, whatfoever put together, according to any Rules of Definition. The only way is, by applying to his Senses the proper Object; and fo producing that Idea in him, for which he has learned the name already. A studious blind Man, who had mightily beat his Head about visible Objects, and made use of the Explication of his Books and Friends, to understand those Names of Light and Colours, which often came in his way; bragg'd one Day, That he now under ood what Scarlet fignify'd. Upon which his Friend demanding, what Scarlet was? blind Man answer'd, It was like the Sound of a Trumpet. Tust such an Understanding of the Name of any other simple Idea will he have, who hopes to get it only from a Definition, or other Words made use of to explain it.

6. 12. The Case is quite otherwise in complex Ideas; which confishing of several simple ones, it is in the Power of Words, standing for the several Ideas, that make that Composition, to imprint complex Ideas in the Mind, which were never there before, and so make their Names be understood.

The Contrary sheaved in complex Ideas, by Instances of a Statue and Rainbow.

In fuch Collections of Ideas, passing under one Name, Definition, or the teaching the Signification of one Word, by feveral others, has place, and may make us understand the Names of Things, which never came within the reach of our Senfes; and frame Ideas suitable to those in other Mens Minds, when they use those Names: provided that none of the Terms of the Definition stand for any fuch simple Ideas, which he to whom the Explication is made, has never yet had in his Thought. Thus the Word Statue may be explain'd to a blind Man by other Words, when Picture cannot, his Senses having given him the Idea of Figure, but not of Colours, which therefore Words cannot excite in him. This gained the Prize to the Painter, against the Statuary; each of which contending for the Excellency of his Art, and the Statuary bragging, that his was to be preferred, because it reached farther, and even those who had lost their Eyes, could yet perceive the excellency of it. The Painter agreed to refer him? It to the Judgment of a blind Man; who being brought where there was a Statue made by the one, and a Picture drawn by the other; he was first led to the Statue,

in which he traced with his Hands, all the Lineaments of the Face and Body; and with great Admiration, applauded the Skill of the Workman. But being led to the Picture, and having his Hands laid upon it, was told, That now he touched the Head, and then the Forehead, Eyes, Nose, &c. as his Hand moved over the Parts of the Picture on the Cloth, without finding any the least Distinction: Whereupon, he cried out, that certainly that must needs be a very admirable and divine Piece of Workmanship, which could represent to them all those Parts, where he could neither feel nor perceive any thing.

6. 13. He that should use the Word Rainbow, to one who knew all those Colours, but yet had never seen that Phenomenon, would, by enumerating the Figure, Largeness, Position, and Order of the Colours, fo well define that Word, that it might be perfectly understood. But yet that Definition, how exact and perfect foever, would never make a blind Man understand it; because several of the simple Ideas that make that complex one, being fuch as he never received by Senfation and Expe-

rience, no Words are able to excite them in his Mind.

The Names of complex Ideas nuter to be made intelligible by Words.

6. 14. Simple Ideas, as has been shewed, can only be got by Experience, from those Objects, which are proper to produce in us those Perceptions. When by this means we have our Minds ftored with'em, and know the Names for them, then we are in a condition to define, and by Defini-

tion to understand the Names of complex Ideas, that are made up of them. But when any term stands for a simple Idea, that a Man has never yet had in his Mind, it is impossible by any Words, to make known its Meaning to him. When any term stands for an Idea a Man is acquainted with, but is ignorant, that that term is the Sign of it, there another Name, of the same Idea which he has been accustomed to, may make him underfland its meaning. But in no case whatsoever, is any Name, of any simple Idea, capable of a Definition.

6. 15. Fourthly, But though the Names of Fourthly, simple Ideas, have not the help of Definition to Names of simple determine their Signification; yet that hinders Ideas least doubtful. not, but that they are generally less doubtful and uncertain, than those of mixed Modes and Substances. Because

they standing only for one simple Perception, Men, for the most part, easily and perfectly agree in their Signification: And there is little room for mistake and wrangling about their meaning. He that knows once, that Whiteness is the Name of that Colour he has observed in Snow, or Milk, will not be apt to mis-

apply

apply that Word, as long as he retains that *Idea*; which when he has quite loft, he is not apt to mistake the meaning of it, but perceives he understands it not. There is neither a multiplicity of simple Ideas to be put together, which makes the doubtfulness in the Names of mixed Modes: nor a supposed, but an unknown real Essence, with Properties depending thereon, the precise Number whereof are also unknown, which makes the Difficulty in the Names of Substances. But on the contrary, in simple Ideas the whole Signification of the Name is known at once, and confifts not of Parts, whereof more or less being put in, the Idea may be varied, and so the Signisication of its Name, be obscure or uncertain.

6. 16. Fifthly, This farther may be observed, Fifthly, Simple concerning simple Ideas and their Names, that they have but few Ascents in linea Predicamentali, (as they call it) from the lowest Species to the summum Genus. The Reason whereof is,

Ideas have few Ascents in linea Prædicamen-

that the lowest Species being but one simple Idea, nothing can be left out of it, that so the difference being taken away, it may agree with some other thing in one Idea common to them both; which having one Name, is the Genus of the other two: v.g. There is nothing can be left out of the Idea of White and Red; to make them agree in one common Appearance, and so have one general Name; as Rationality being left out of the complex Idea of Man, makes it agree with Brute, in the more general Idea and Name of Animal. And therefore when to avoid unpleafant Enumerations, Men would comprehend both White and Red, and several other such simple Ideas, under one general Name, they have been fain to do it by a Word which denotes only the way they get into the Mind. For when White, Red, and Yellow, are all comprehended under the Genus or Name Colour, it fignifies no more, but fuch Ideas as are produced in the Mind only by the Sight, and have enterance only through the Eyes. And when they would frame yet a more general Term, to comprehend both Colours and Sounds, and the like simple Ideas, they do it by aWord that fignifies all fuch as come into the Mind only by oneSense: And so the general term Quality, in its ordinary Acceptation, comprehends Colours, Sounds, Tafles, Smells, and tangible Qualities, with Dislinction from Extension, Number, Motion, Pleasure, and Pain, which make Impressions on the Mind, and Introduce their *Ideas* by more Senses than one

§. 17. Sixthly, The Names of simple Ideas, Sixthly, Names Substances, and mixed Modes, have also this of simple Ideas difference; That those of mixed Modes stand Rand for Ideas

not at all ar- for Ideas perfectly arbitrary: Those of Subbitrary. flances, are not perfectly so; but refer to a Pattern, the with some latitude: and those of simple Ideas are perfectly taken from the Existence of Things, and are not arbitrary at all. Which what difference it makes in the Significations of their Names, we shall see the in following Chapters.

The Names of simple Modes disfer little from those of

simple Ideas.

CHAP. V.

Of the Names of mixed Modes and Relations.

They stand for abstract Ideas, as other general Names.

G. I. HE Names of mixed Modes being general, they stand, as has been shewn, for sorts or Species of Things, each of which has its peculiar Essence.

The Effences of these Species also, as has been shewed, are nothing but the abstract *Ideas* in the Mind, to which rhe Name is annexed. Thus far the Names and Essences of mixed Modes, have nothing but what is common to them with other *Ideas*: But if we take a little nearer survey of them, we shall find that they have something peculiar,

which perhaps may deferve our Attention.

First. The Ideas they stand for, are made by the Understanding.

which fort, the Mind has no Power to make any one, but only receives such as are presented to it, by the real Exist-

ence of Things operating upon it.

Secondly, made arbitrarily, and without Patterns.

5,3. In the next Place, these Espences of the Species of mixed Modes, are not only made by the Mind, but made very arbitrarily, made without Patterns, or reference to any real Existence. Wherein they differ from those of Sub-

flances, which carry with them the Supposition of some real Being, from which they are taken, and to which they are conformable. But in its complex *Ideas* of mixed Modes, the Mind takes a Liberty not to follow the Existence of Things exactly. It unites and retains certain Collections, as so many distinct Specifick *Ideas*, whilst others, that as often occur in Nature,

and are as plainly suggested by outward Things, pass neglected without particular Names or Specifications. Nor does the Mind, in these of mixed Modes, as in the complex *Ideas* of Substances, examine them by the real Existence of Things; or verify them by Patterns, containing such peculiar Compositions in Nature. To know whether his *Idea* of *Adulters*, or *Incest*, be right, will a Man seek it any where amongst Things existing? Or is it true, because any one has been Witness to such an Action? No: but it suffices here, that Men have put together such a Collection into one complex *Idea*, that makes the *Archetyse*, and Specifick *Idea*, whether ever any such Action were committed in rerum natura, or no.

6. 4. To understand this aright, we must consider wherein this making of these complex Ideas consists; and that is not in the making any new

How this:

Idea, but putting together those which the Mind had before. Wherein the Mind does these three Things: First, It chures a certain Number. Secondly, It gives them Connection, and makes them into one Idea. Thirdly, It ties them together by a Name. If we examine how the Mind proceeds in these, and what Liberty it takes in them, we shall easily observe, how these Essences of the Species of mixed Modes, are the Workmanship of the Mind; and consequently, that the Species themselves are of Mens making.

6. 5. No body can doubt, but that these *Ideas* of mixed Modes, are made by a voluntary Collection of *Ideas* put together in the Mind, independent from any original Patterns in Nature, who will but reflect, that this fort of complex *Ideas* may be made, abstracted, and have Names

Evidently arbitrary, that the Idea is often before the Existence.

given 'em, and fo a Species be constituted, before any one individual of that Species ever existed. Who can doubt, but the Ideas of Sacrilege or Adultery, might be framed in the Mind of Men, and have Names given them; and so these Species of mixed Modes be constituted, before either of them was ever committed; and might be as well discoursed of, and reasoned about, and as certain Truths discovered of them. whilst yet they had no being but in the Understanding, as well as now, that they have but too frequently a real Existence? Whereby it is plain, how much the forts of mixed Modes are the Creatures of the Understanding, where they have a being as fubservient to all the ends of real Truth and Knowledge, as when they really exist: And we cannot doubt, but Law-makers have often made Laws about Species of Actions, which Vol. II. prere were only the Creatures of their own Understandings: Beings that had no other existence, but in their own Minds. And, I think, no Body can deny, but that the Resurrection was a Species of mixed Modes in the Mind, before it really existed.

Inflances; Murder, Ineff. Stabbing.

6. To fee how arbitrarily these Essences of mixed Modes are made by the Mind, we need but take a view of almost any of them. A little looking into them, will fatisfy us, that 'tis the Mind, that combines several scattered independent

dent Ideas, into one complex one; and by the common Name it gives them, makes them the Essence of a certain Species, without regulating itself by any Connection they have in Na-For what greater Connection in Nature, has the Idea of a Man, than the Idea of a Sheep, with Killing; that this is made a particular Species of Action, fignify'd by the word Murder; and the other not? Or what Union is there in Nature, between the Idea, of the Relation of a Father, with Killing, than that of a Son, or Neighbour; that those are combined into one complex Idea, and thereby made the Essence of the diffin ? Species Parricide, whilft the other make no distin ? Species at all? But though they have made Killing a Man's Father, or Mother, a distinct Species from Killing his Son, or Daughter; yet in some other Cases, Son and Daughter are taken in too, as well as Tather and Mother; and they are all equally comprehended in the same Species, as in that of Incest. Thus the Mind in mixed Modes arbitrarily unites into complex Ideas, such as it finds convenient; whilst others that have altogether as much union in Nature; are left loofe and never combined into one Idea, because they have no need of one Name. 'Tis evident then, that the Mind, by its free Choice, gives a Connection to a certain Number of Ideas, which in Nature have no more Union with one another, than others that it leaves cut: Why else is the part of the Weapon, the beginning of the Wound is made with, taken Notice of, to make the distinct Species called Stabbing, and the Figure and Matter of the Weapon left out? I do not fay, this is done without Reafon, as we shall see more by and by; but this I say, that it is done by the free Choice of the Mind, pursuing its own ends; and that therefore these Species of mixed Modes are the Workmanship of the Understanding: And there is nothing more evident than that, for the most part, in the framing these Ideas, the Mind fearches not its Patterns in Nature, nor refers the Ideas it makes, to the real Existence of things; but puts such together, as may best serve its own Purposes, with tying

It felf to a precise Imitation of any thing that really exists.

67. But though these complex Ideas, or Essences of mixed Modes, depend on the Mind, and are made by it with great Liberty; yet they are not made at random, and jumbled together of Larguage.

without any reason at all. Though these complex Ideas be not always copied from Nature, yet they are always fuited to the end for which abstract Ideas are made: And though they be Combinations made of Ideas, that are loofe enough, and have as little Union in themselves, as several other, to which the Mind never gives a Connection that combines them into one Idea; yet they are always made for the convenience of Communication, which is the chief end of Language. The use of Language is, by short Sounds to signify with ease and dispatch general Conceptions; wherein not only abundance of Particulars may be contained, but also a great Variety of independent Ideas collected into one complex one. In the making therefore of the Species of mixed Modes, Men have had regard only to such Combinations as they had occasion to mention one to another. Those they have combined into distinct complex Ideas, and given Names to; whilst others that in Nature have as near an Union, are left loofe and unregarded. For to go no farther than human Actions themselves, if they would make distinct abstract Ideas of all the Varieties might be observed in them, the Number must be infinite, and the Memory confounded with the Plenty, as well as overcharged to little Purpose. It suffices, that Men make and name so many complex Ideas of these mixed Modes, as they find they have occasion to have Names for, in the ordinary occurrence of their Affairs. If they join to the Idea of Killing, the Idea of Father or Mother, and so make a distinct Species from killing a Man's Son, or Neighbour, it is because of the different Heinoulness of the Crime, and the diffinct Punishment is due to the murdering a Man's Father or Mother, different from what ought to be inflicted on the Murder of a Son or Neighbour; and therefore they find it necessary to mention it by a distinct Name, which is the end of making that distinct Combination. But though the Ideas of Mother and Daughter, are so differently treated, in reference to the Idea of Killing, that the one is joined with it to make a distinct abstract Idea with a Name, and so a distinct Species, and the other not; yet in respect of carnal Knowledge, they are both taken in under Incelt; and that still for the same convenience of expressing under one Name, and reckoning of one Species, fuch unclean Mixtures

as have a peculiar turpitude beyond others; and this to avoid Circumlocutions, and tedjous Descriptions.

Whereof the intranslatable Words of diwers Languages are a Proof.

6. 8. A moderate Skill in different Languages, will easily satisfy one of the Truth of this, it being so obvious to observe great store of Words in one Language, which have not any that answer them in another. Which plainly shews, that those of one Country, by their

Customs and Manner of Life, have found occasion to make feveral complex Ideas, and give Names to them, which others never collected into specifick Ideas. This could not have happened, if these Species were the steddy Workmanfhip of Nature; and not Collections made and abstracted by the Mind, in order to naming, and for the convenience of Communication. The Terms of our Law, which are not empty Sounds, will hardly find Words that answer them in the Spanish or Italian, no scanty Languages; much less, I think, could any one translate them into the Carribbee, or Westoe Tongues: And the Versura of the Romans, or Corban of the Fews, have no Words in other Languages to answer them: The Reason whereof is plain, from what has been said. if we will look a little more nearly into this matter, and exactly compare different Languages, we shall find, that though they have Words, which in Translations and Dictionaries, are supposed to answer one another; yet there is scarce one of ten, amongst the Names of complex Ideas, especially of mixed Modes, that stands for the same precise Idea, which the Word does that in Dictionaries it is rendred by. There are no Ideas more common, and less compounded, than the Measures of Time, Extension, and Weight, and the Latin Names Hora, Pes, Libra, are without Difficulty rendred by the English Names, Hour, Foot, and Pound: But yet there is nothing more evident, than that the Ideas a Roman annexed to these Latin Names, were very far different from those which an Englishman expresses by those English ones. And if either of these should make use of the Measures that those of the other Language defigned by their Names, he would be quite out in his account. These are too sensible Proofs to be doubted; and we shall find this much more so, in the Names of more abstract and compounded Ideas; fuch as are the greatest part of those which make up Moral Discourses: Whose Names, when Men come curiously to compare with those they are translated into, in other Languages, they will find very few of them exactly to correspond in the whole extent of their Significations. §. 9.

6. 9. The Reason why I take so particular Notice of this, is, that we may not be mistaken about Genera, and Species, and their Essences, as if they were Things regularly and constantly made by Nature, and had a real Existence in

This sheavs Species to be made for Communication.

Things; when they appear, upon a more wary survey, to be nothing else but an Artifice of the Understanding, for the eafier signifying such Collections of Ideas, as it should often have occasion to communicate by one general Term; under which divers Particulars, as far forth as they agreed to that abiltract Idea, might be comprehended. And if the doubtful Signification of the word Species, may make it sound harsh to some, that I say, that the Species of mixed Modes are made by the Understanding: yet, I think, it can by no body be denied, that 'tis the Mind makes those abstract complex Ideas, to which specifick Names are given. And if it be true, as it is, that the Mind makes the Patterns, for sorting and naming of Things, I leave it to be considered, who makes the Boundaries of the Sort or Species; since with me, Species and Sort have no other difference than that of a Latin and English Idiom.

§. 10. The near Relation that there is between Species, Essences, and their general Name, at least in mixed Modes, will farther appear, when we consider, that it is the Name that seems to preserve those Essences, and give them their lasting Duration. For the Connection between the loose parts of those complex Ideas, being made by the Mind, this Union, which has no parti-

In mixed.
Modes, 'tis the
Name that ties
the Combination together, and
makes it a
Species.

cular Foundation in Nature, would ceafe again, were there not fomething that did, as it were, hold it together, and keep the Parts from scattering. Though therefore it be the Mind that makes the Collection, 'tis the Name which is, as it were, the Knot that ties them fast together. What a vast Variety of different Ideas, does the Word Triumphus hold together, and deliver to us as one Species? Had this Name been never made, or quite loft, we might, no doubt, have had Descriptions of what passed in that Solemnity: But yet, I think, that which holds those different Parts together, in the Unity of one complex Idea, is that very Word annexed to it; without which, the feveral Parts of that would no more be thought to make one thing, than any other shew, which having never been made but once, had never been united into one complex Idea, wider one Denomination. How much therefore, in mixed Modes, the Unity necessary to any Essence depends on the D 3 $\operatorname{Mind}_{\mathbb{R}^n}$ Mind; and how much the continuation and fixing of that Unity depends on the Name in common Use annexed to it, I leave to be confidered by those who look upon Essences and Species

as real established Things in Nature.

v. 11. Suitable to this, we find, that Mon, Speaking of mixed Al des, seldow imagine or take any other for Species of them, but such as are set out by Name: Because they being of Man's making only in order to naming, no fuch Species are taken Notice of, or supposed to be, unless a Name be joined to it, as the Sign of Man's having combined into one Idea several loofe ones; and by that Name, giving a lasting Union to the Parts, which would otherwife cease to have any, as soon as the Mind laid by that abstract Idea, and ceased actually to think on it. But when a Name is once annexed to it, wherein the Parts of that complex Idea have a fettled and permanent Union; then is the Essence, as it were, established, and the Species looked on as compleat. For to what purpose should the Memory charge itself with such Compositions, unless it were by Abstraction to make them general? And to what purpose make them general, unless it were, that they might have general Names, for the convenience of Discourse, and Communication? Thus we fee, that Killing a Man with a Sword, or a Hatchet, are looked on as no diffinct Species of Action: But if the Point of the Sword first enter the Body, it passes for a distinct Species, where it has a distinct Name, as in England, in whose Language it is called Stabbing: But in another Country, where it has not happened to be specified under a peculiar Name, it passes not sor a distinct Species. But in the Species of corporeal Substances, though it be the Mind that makes the nominal Effence: yet fince those Ideas, which are combined in it, are supposed to have an Union in Nature, whether the Mind joins them or no, therefore those are looked on as diffinct Siecies, without any Operation of the Mind, either abstracting, or giving a Name to that complex Idea.

For the Originals of mixed Modes, we look no farther than the Mind, which also she Workmarship of the Understanding.

§. 12. Conformable also to what has been said concerning the Effences of the Species of mixed Modes, that they are the Creatures of the Understanding, rather than the Works of Nature; Conformable, I say, to this, we find, that their Names lead our Thoughts to the Mind, and no farther. When we speak of Institute, or Gratitude, we frame to ourselves no Imagination of any thing existing, which we would conceive; but our Thoughts terminate in the abstract Ideas

oţ.

of those Virtues, and look not farther; as they do, when we speak of a Horse, or Iron, whose Specifick Ideas we consider not, as barely in the Mind, but as in things themselves, which afford the original Patterns of those Ideas. But in mixed Modes, at least the most considerable Parts of them, which are moral beings, we consider the original Patterns, as being in the Mind; and to those we refer for the distinguishing of particular Beings under Names. And hence I think it is, That these Essences of the Species of mixed Modes, are by a more particular Name called Notions: as by a peculiar Right appertaining to the Understanding.

6. 13. Hence likewise we may learn, Why the complex Ideas of mixed Modes are commonly more compounded and decompounded, than those of natural Substances. Because they being the Workmanship of the Understanding, pursuing only its own ends, and the conveniency of expressing in short those Ideas ir would make known to another does with great Liberty unite

Their being made by the Understanding without Patterns, thewas they cafen why they are so compounded.

known to another, does with great Liberty unite often into one abstract Idea Things that in their Nature have no coherence; and so under one Term, bundle together a great Variety of compounded and decompounded Ideas. Thus the Name of Procession, what a great mixture of independent Ideas of Persons, Habits, Tapers, Orders, Motions, Sounds, does it contain in that complex one, which the Mind of Man has arbitrarily put together, to express by that one Name? Whereas the complex Ideas of the Sorts of Substances are usually made up of only a small Number of simple ones; and in the Species of Animals, these two, viz. Shape and Voice, commonly make the whole nominal Essence.

6. 14. Another thing we may observe from what has been said, is, that the Names of mixed Modes always signify (when they have any determined Signification) the real Essences of their Species. For these abstract Ideas, being

Names of mixed Modes fixed alongs for their real Effects.

the Workmanship of the Mind, and not referred to the real Existence of Things, there is no Supposition of any thing more signify'd by that Name, but barely that complex *Idea*, the Mind itself has formed, which is all it would have expressed by it; and is that on which all the Properties of the *Species* depend, and from which alone they all flow: and so in these the real and nominal Essence is the same; which of what Concernment it is to the certain Knowledge of general Truth, we shall see herafter.

Why their Names are usually got before their Ideas. 6. 15. This also may shew us the Reason, Why for the most part the Names of mixed Modes are got, before the Ideas they stand for are perfectly known. Because there being no Species of these ordinarily taken Notice of, but

what have Names; and those Species, or rather their Essences, being abstract complex Ideas made arbitrarily by the Mind, it is convenient, if not Necessary, to know the Names, before one endeavour to frame these complex Ideas: unless a Man will fill his Head with a Company of abstract complex Ideas, which others having no Names for, he has nothing to do with, but to lay by and forget again. I confess, that in the Beginning of Languages, it was necessary to have the Idea, before one gave it the Name: And so it is still, where making a new complex Idea, one also, by giving it a new Name, makes a new Word. But this concerns not Languages made, which have generally pretty well provided for Ideas, which Men have frequent Occasion to have, and communicate: And in such, I ask whether it be not the ordinary Method, that Children learn the Names of mixed Modes, before they have their Ideas? What one of a thousand ever frames the abstract Idea of Glory and Ambition before he has heard the Names of them? In fimple Ideas and Substances, I grant it is otherwise; which being such Ideas as have a real Existence and Union in Nature, the Ideas, or Names, are got one before the other, as it happens.

6. 16. What has been faid here of mixed Modes, is with very little difference applicable also to Reason of my being so large Relations; which fince every Man himself on this Subject may observe, I may spare myself the Pains to enlarge on: especially, fince what I have here faid concerning Words in this third Book, will possibly be thought by some to be much more than what so flight a Subject required. I allow it might be brought into a narrower Compass: But I was willing to flay my Reader on an Argument, that appears to me new, and a little out of the way, (I am fure 'tis one I thought not of, when I began to write,) That by fearching it to the bottom, and turning it on every fide, some part or other might meet with every one's Thoughts, and give occasion to the most averse, or negligent, to reflect on a general Miscarriage; which, though of great consequence, is little taken Notice of. When it is confidered, what a pudder is made about Effences, and how much all forts of Knowledge, Discourse, and Conversation, are pestered and disordered by the careless and confused

Use and Application of Words, it will perhaps, be thought worth while throughly to lay it open. And I shall be pardoned if I have dwelt long on an Argument which I think therefore needs to be inculcated; because the Faults, Men are usually guilty of in this kind, are not only the greatest Hinderances of true Knowledge; but are so well thought of, as to pass for Men would often see what a small Pittance of Reason and Truth, or possibly none at all, is mixed with those husting Opinions they are fwell'd with; if they would but look beyond fashionable Sounds, and observe what Ideas are, or are not comprehended under those Words, with which they are so armed at all Points, and with which they so confidently lay about them. I shall imagin I have done some Service to Truth, Peace, and Learning, if, by any enlargement on this Subject, I can make Men reflect on their own Use of Language; and give them Reason to suspect, that since it is frequent for others, it may also be possible for them to have sometimes very good and approved Words in their Mouths, and Writings, with very uncertain, little, or no Signification. And therefore it is not unreasonable for them to be wary herein themselves, and not to be unwilling to have them examined by others. With this Defign therefore, I shall go on with what I have farther to fay, concerning this matter.

CHAP. VI.

Of the Names of Substances.

G. I. HE common Names of Substances, as well as other General Terms, The common stand for Sorts; which is nothing Names of Subelse but the being made Signs of such complex stance stand for Ideas, wherein feveral particular Substances do, or might agree, by virtue of which they are capable of being comprehended in one common Conception, and be fignify'd by one Name. I fay, do or might agree: for though there be but one Sun existing in the World, yet the Idea of it being abstracted, so that more Substances (if there were feveral) might each agree in it; it is as much a Sort, as if there were as many Suns as there are Stars. They want not their Reasons, who think there are, and that each fixed Star, would answer the Idea the Name Sun stands for, to one who were placed in a due distance; which, by the way, may shew us how much the Sorts, or, if you please, Genera and Species of Things (for those Latin Terms signify to me no more than the English word Sort) depend on such Collections of Ideas, as Men have made; and not on the real Nature of Things: since 'tis not impossible, but that in Propriety of Speech, that might be a Sun to one, which is a Star to another.

The Effice of or Species, whereby it is conflicted that pareach fort is ticular Sort, and distinguished from others, is the abstract that we call its Essence, which is nothing but that abstract Idea to which the Name is an-

newed: So that every thing contained in that Idea, is effential to that Sort. This, though it be all the Estence of natural Substances that we know, or by which we diffinguish them into Sorts; yet I call it by a peculiar Name, the noninal Escence, to diffinguish it from that real Constitution of Substances, upon which depends this nominal Escence, and all the Properties of that fort; which therefore, as has been said, may be called the real Escence, v. g. the nominal Essence of Gold, is that complex Idea the Word Gold stands for, let it be, for Instance, a Body yellow, of a certain weight, malleable, suffiche, and fixed. But the real Essence is the Constitution of the insensible Parts of that Body, on which those Qualities, and all the other Properties of Gold depend. How far these two are different, though they are both called Essence, is obvious, at first sight, to discover.

6. 3. For though, perhaps, voluntary Motion, The rominal with Sense and Reason, join'd to a Body of a certain Shape, be the complex Idea, to which I, and others, annex the Name Man; and so be the nominal Essence of the Species so called;

yet no Eody will fay, that that complex Idea is the real Effence and Source of all those Operations, which are to be found in any Individual of that fort. The Foundadation of all those Qualities, which are the Ingredients of our complex Idea, is something quite different: And had we such a Knowledge of that Constitution of Man, from which his Faculties of Moving, Sensation, and Reasoning, and other Powers flow, and on which his so regular Shape depends, as 'tis possible Angels have, and 'tis certain his Maker has, we should have a quite other Idea of his Esceres, than what now is contained in our Definition of that Species, be it what it will: And our Idea of any individual Man would be as far different

from what it now is, as is his who knows all the Springs and Wheels, and other Contrivances within, of the famous Clock at Strasburg, from that which a gazing Countryman has of it, who barely sees the Motion of the Hand, and hears the Clock strike, and observes only some of the cutward Appearances

§. 4. That Essence, in the ordinary Use of the Word, relates to Sorts, and that it is considered in particular Beings, no farther than as due

Nothing Effential to Individuals

they are ranked into Sorts, appears from hence: That take but away the abstract Ideas, by which we fort Individuals, and rank them under common Names, and then the thought of any thing effential to any of them, instantly vanishes: we have no Notion of the one, without the other: which plainly shews their Relation. 'Tis necessary for me to be as I am; GOD and Nature has made me fo: But there is nothing I have is effential to me. An Accident, or Difease, may very much alter my Colour, or Shape; a Fever, or Fall, may take away my Reason or Memory, or both; and an Apoplexy leave neither Senfe, nor Understanding, no, nor Life. Other Creatures of my shape may be made with more. and better, or fewer, and worse Faculties, than I have: and others may have Reason and Sense in a shape and body very different from mine. None of these are effential to the one, or the other, or to any Individual whatfoever, till the Mind refers it to some Sort or Species of Things; and then prefently, according to the abstract Idea of that fort, something is found effential. Let any one examine his own Thoughts, and he will find, that as foon as he supposes or speaks of Effential, the Confideration of some Species, or the complex Idea, signified by some general Name, comes into his Mind: And 'tis in reference to that, that this or that Quality is faid to be essential. So that if it be asked, whether it be essential to me, or any other particular corporeal Being, to have Reafon? I fay no; no more than it is effential to this white thing I write on, to have Words in it. But if that particular Being be to be counted of the Sort Man, and to have the Name Man given it, then Reason is effential to it, supposing Reason to be a part of the complex Idea, the Name Min Stands for: as it is effential to this thing I write on to contain Words, if I will give it the Name Treatife, and rank it under that Species. So that effential, and not effential, relate only to our abstract Ideas, and the Names annexed to them; which amounts to no more but this, That whatever particular Thing has not in it those Qualities, which are contained in the abstract *Idea*, which any general Term stands for, cannot be ranked under that *Species*, nor be called by that Name, fince that abstract

Idea is the very Essence of that Species.

6. 5. Thus if the Idea of Body, with some People, be bare Extension or Space, then Solidity is not effential to Body: If others make the Idea, to which they give the Name Body, to be Solidity and Extension, then Solidity is effential to Body. That therefore, and that alone is confidered as effential, which makes a part of the complex Idea the Name of a Sort. stands for, without which no particular thing can be reckoned of that Sort, nor be intituled to that Name. Should there be found a parcel of Matter, that had all the other Qualities that are in Iron, but wanted Obedience to the Load-Hone; and would neither be drawn by it, nor receive Direction from it, would any one question, whether it wanted any thing effential? It would be absurd to ask, Whether a thing really existang wanted any thing effential to it. Or could it be demanded, Whether this made an essential or specifick difference, or no; fince we have no other measure of effential or specifick, but our abstract Ideas? And to talk of specifick Differences in Nature, without reference to general Ideas and Names, is to talk unintelligibly. For I would ask any one, What is sufficient to make an effential difference in Nature, between any two particular Beings, without any regard had to some abstract Idea. which is looked upon as the Essence and Standard of a Species? All fuch Patterns and Standards, being quite laid aside, garticular Beings, considered barely in themselves, will be found to have all their Qualities equally effential; and every thing, in each Individual, will be effential to it, or which is more, nothing at all. For though it may be reasonable to ask, Whether obeying the Magnet, be effential to Iron? yet, I think, it is very improper and infignificant to atk, Whether it be essential to the particular parcel of Matter I cut my Pen with, without confidering it under the Name Iron, or as being of a certain Species? And if, as has been faid, our abstract Ideas, which have Names annexed to them, are the Boundaries of Species, nothing can be effential but what is contained in those Ideas.

§. 6. Tis true, I have often mentioned a real Essence, diffinct in Substances, from those abstract Ideas of them, which I call their nominal Essence. By this real Essence, I mean, that real constitution of any thing, which is the Foundation of all those Properties, that are combined in, and are constantly found to co-exist with the nominal Essence; that particular

Constitution

Constitution which every Thing has within itself, without any Relation to any thing without it. But Effence, even in this Sense, relates to a sort, and supposes a Species: For being that real Conflitution, on which the Properties depend, it necessarily supposes a fort of Things, Properties belonging only to Species, and not to Individuals; v. g. Supposing the nominal Effence of Gold, to be a Body of fuch a peculiar Colour and Weight, with Malleability and Fusibility, the real Essence is that Constitution of the Parts of Matter, on which these Qualities, and their Union, depend; and is also the Foundation of its Solubility in Aq. Regia, and other Properties accompanying that complex Idea. Here are Essences and Properties, but all upon Supposition of a fort, or general abstract Idea, which is confidered as immutable; but there is no Individual parcel of Matter, to which any of these Qualities are so annexed, as to be essential to it, or inseparable from it. That which is essential, belongs to it as a Condition, whereby it is of this or that fort: But take away the Confideration of its being ranked under the Name of some abstract Idea, and then there is nothing necesfary to it, nothing inseparable from it. Indeed, as to the real Espences of Substances, we only suppose their being, without precifely knowing what they are: But that which annexes em still to the Species, is the nominal Essence, of which they are the supposed Foundation and Cause.

6. 7. The next thing to be consider'd is, by which of those Essences it is, that Substances are determined into Sorts, or Species; and that, 'tis evident, is by the nominal Essence. For 'tis that close that the Name which is the mark of the

The nominal Essence bounds the Species.

evident, is by the nominal Essence. For its that alone, that the Name, which is the mark of the fort, signifies. 'Tis impossible therefore, that any thing should determine the forts of Things, which we rank under general Names, but that Idea, which that Name is designed as a mark for; which is that, as has been shewn, which we call the Nominal Essence. Why do we say, This is a Horse, and that a Mule; this is an Animal, that an Herb? How comes any particular thing to be of this or that Sort, but because it has that nominal Essence, or, which is all one one, agrees to that abstract Idea, that Name is annexed to? 'And I desire any one but to restect on his own Thoughts, when he hears or speaks any of those, or other Names of Substances, to know what fort of Essences they stand for.

6. 8. And that the Species of Things to us, are nothing but the ranking them under distinct Names, according to the complex Ideas in us; and not according to precise, distinct, real Essences in them, is plain from hence, That we find many of

the Individuals that are rank'd into one fort, call'd by one common Name, and fo received as being of one Species, have vet Qualities depending on their real Constitutions, as far different one from another, as from others, from which they are accounted to differ *specifically*. This, as it is easy to be observed by all, who have to do with natural Bodies; fo Chymists especially are often, by fad Experience, convinced of it, when they, sometimes in vain, seek for the same Qualities in one parcel of Sulphur, Antimony, or Vitriol, which they have found in others. For though they are Bodies of the fame Species, having the fame nominal Effence, under the fame Name: yet do they often, upon fevere ways of Examination, betray Qualities so different one from another, as to frustrate the Expectation and Labour of very wary Chymists. But if Things were diffinguished into Species, according to their real Effences, it would be as impossible to find different Properties in any two individual Substances of the same Species, as it is to find different Properties in two Circles, or two equilateral Triangles. That is properly the Essence to us, which determines every particular to this or that Cleffis; or, which is the fame Thing, to this or that general Name: And what can that be else, but that abstract Idea to which that Name is annexed? And so has, in truth, a Reference, not so much to the Being of particular Things, as to their general Denominations.

Not the real Essence, which we know not.

6. 9. Nor indeed can we rank, and fort Things, and confequently (which is the end of forting) denominate them by their real Essences, because we know them not. Our Faculties carry us no farther towards the Knowledge and Di-

shinction of Substances, than a Collection of those sensible Ideas, which we observe in them; which however made with the greatest diligence and exactness, we are capable of, yet is more remote from the true internal Constitution, from which those Qualities slow, than, as I said, a Countryman's Idea is from the inward contrivance of that samous Clock at Strasburg, whereof he only sees the outward Figure and Motions. There is not so contemptible a Plant or Animal, that does not confound the most inlarged Understanding. Though the samiliar use of things about us, take off our Wonder; yet it cures not our Ignorance. When we come to examine the Stones, we tread on; or the Iron, we daily handle, we presently find, we know not their Mike; and can give no Reason of the different Qualities we find in them. 'Tis evident, the internal Constitution, whereon their Properties depend, is unknown to us. For

to go no farther than the groffest and most obvious we can imagin amongst them, What is that Texture of Parts, that real Effence, that makes Lead and Antimony fufible; Wood and Stones not? What makes Lead and Iron malleable; Antimony and Stones not? And yet how infinitely these come short of the fine Contrivances, and unconceivable real Fsences of Plants or Animals, every one knows. The Workmanship of the Allwife and Powerful God, in the great Fabrick of the Universe, and every part thereof, farther exceeds the Capacity and Comprehension of the most inquisitive and intelligent Man, than the best Contrivance of the most ingenious Man, doth the Conceptions of the most ignorant of rational Creatures. Therefore we in vain pretend to range Things into Sorts, and difpose them into certain Classes, under Names, by their real Escaces, that are so far from our Discovery or Comprehension. A blind Man may as foon fort things by their Colours; and he that has lost his Smell, as well diffinguish a Lilly and a Rose by their Odours, as by those internal Constitutions which he knows not. He that thinks he can distinguish Sheep and Goats by their real Escences, that are unknown to him, may be pleased to try his Skill in those Species, called Cassi wary, and Quercohinchio; and by their internal real Escences, determine the Boundaries of those Species, without knowing the complex Idea of sensible Qualities, that each of those Names stand for in the Counries where those Animals are to be found,

6. 10. Those therefore who have been taught, that the several Species of Substances had their distinct internal substantial Forms; and that it was those Forms which made the Distinction of Substances into their true Species and Genera,

Not substantial Forms, which we know less.

were led yet farther out of the Way, by having their Minds fet upon fruitless Enquires after fulficantial Forms, wholly unintelligible, and whereof we have scarce so much as any obscure, or confused Conception in general.

of the total contention in general.

1.11. That our ranking and distinguishing natural Substances into Species, consists in the nominal Essences the Mind makes, and not in the real Essences to be found in the Things themselves, is farther evident from our Ideas of Spirits. For the Mind getting, only by reflecting on its own Operations, those simple Ideas which it attributes to Spirits, it hath, or can have no other Notion of Spirit, but by attributing all those Operations, it finds in itself, to a fort of

That the nominal Effence is that whereby we diffinguish Species, farther ewident from Spin rits.

Beings, with-

our Confideration of Matter. And even the most advanced Notion we have of God, is but attributing the same simple Ideas which we have got from Reflection on what we find in our felves, and which we conceive to have more Perfection in them, than would be in their absence, attributing, I say, those fimple Ideas to him in an unlimited Degree. Thus having got from reflecting on our felves, the Idea of Existence, Knowledge, Power, and Pleafure, each of which we find it better to have than to want; and the more we have of each, the better; joining all these together, with Infinity to each of them, we have the complex Idea of an Erernal, Omniscient, Omnipotent, infinitely Wife, and Happy Being. And though we are. told, that there are different Species of Angels; yet we know not how to frame distinct specifick Ideas of them; not out of any Conceit, that the Existence of more Species than one of Spirits, is impossible: But because having no more fimple Ideas (nor being able to frame more) applicable to fuch Beings, but only those few taken from ourselves, and from the Actions of our own Minds in thinking, and being delighted, and moving feveral Parts of our Bodies, we can no otherwife distinguish in our Conceptions the several Species of Stirits, one from another, but by attributing those Operations and Powers, we find in ourselves, to them in a higher or lower Degree; and so have no very distinct specifick Ideas of Spirits, except only of GOD, to whom we attribute both Duration, and all those other Ideas with Infinity; to the other Spirits, with Limitation: Nor as I humbly conceive do we, between GOD and them in our Ideas, put any difference by any Number of simple Ideas, which we have of one, and not of the other, but only that of Infinity. All the particular Ideas of Existence, Knowledge, Will, Power, and Motion, &c. being Ideas derived from the Operations of our Minds, we attribute all of them to all forts of Spirits, with the difference only of Degrees, to the utmost we can imagine, even Infinity, when we would frame, as well as we can, an Idea of the first Being; who yet, 'tis certain, is infinitely more remote in the. real Excellency of his Nature, from the highest and perfectest of all created Beings, than the greatest Man, nav, purest Seraphim, is from the most contemptible part of Matter; and confequently must infinitely exceed what our narrow Understandings can conceive of him.

Whereof there are probably repugnant to Reason, that there may be many numberless Species of Spirits, as much separated and dicies.

verfified one from another, by diffinct Properties, whereof we have no Ideas, as the Species of fensible Things are distinguished one from another, by Qualities, which we know, and observe in them That there should be more Species of intelligent Creatures above us, than there are of fenfible and material below us, is probable to me from hence; That in all the visible corporeal World, we see no Chasms, or Gaps. All quite down from us, the descent is by easy Steps, and a continued feries of Things, that in each remove differ very little one from the other. There are Fishes that have Wings, and are not Strangers to the airy Region: and there are some Birds, that are Inhabitants of the Water; whose Blood is cold as Fishes, and their Flesh so like in taste, that the scrupulous are allowed them on Fish-days. There are Animals so near of kin both to Birds and Beafts, that they are in the middle between both: Amphibious Animals link the Terrettrial and Aquatick together; Seals live at Land and at Sea, and Porpoifes have the warm Blood and Entrails of a Hog; not to mention what is confidently reported of Mermaids, or Sea-men. There are fome Bruits, that feem to have as much Knowledge and Rea-.fon, as fome that are called Men: and the Animal and Vegetable Kingdoms are fo nearly joined, that if you will take the lowest of one, and the highest of the other, there will scarce be perceived any great difference between them; and fo on till we come to the lowest and the most inorganical Parts of Matter, we shall find every where, that the several Species are linked together, and differ but in almost insensible Degrees. And when we confider the infinite Power and Wisdom of the Maker, we have Reason to think, that it is suitable to the magnificent Harmony of the Universe, and the great Defign and infinite Goodness of the Architect, that the Species of Creatures should also, by gentle Degrees, ascend upward from us toward his infinite Perfection, as we fee they gradually descend from us downwards: Which if it be probable, we have Reason then to be perfuaded, that there are far more Species of Creatures above us, than there are beneath; we being in Degrees of Perfection, much more remote from the infinite being of GOD, than we are from the lowest State of Being, and that which approaches nearest to nothing. And yet of all those distinct Species, for the Reasons above said, we have no clear distinct Ideas.

6. 13. But to return to the Species of corporeal Substances. If I should ask any one whether Iceand Water were two distinct Vol. 11.

The nominal Essence that of the Species, provels from Water and Ice, Species of Things, I doubt not but I should be answered in the affirmative: And it cannot be denied, but he that fays, they are two distinct Species, is in the right. But if an Englishman. bred in Jamaica, who, perhaps, had never feen nor heard of Icc, coming into England in the Winter, find the Water he put in his Bason at Night, in a great part frozen in the Morning, and not knowing any peculiar Name it had, should call it hardened Water; I ask, Whether this would be a new Spccies to him, different from Water? And, I think it would be answered here, It would not be to him a new Species, no more than congealed Jelly, when it is cold, is a distinct Specics, from the same Jelly fluid and warm; or than liquid Gold, in the Furnace, is a distinct Species from hard Gold in the Hands of a Workman. And if this be so, 'tis plain, that our distinct Species are nothing but distinct complex Ideas, with distinct Names annexed to them. 'Tis true, every Substance that exists, has its peculiar Constitution, whereon depend those sensible Qualities, and Powers, we observe in it: But the ranking of Things into Species, which is nothing but forting them under feveral Titles, is done by us, according to the Ideas that we have of them: Which tho' fufficient to diffinguish them by Names; fo that we may be able to discourse of them, when we have them not present before us; yet if we suppose it to be done by their real internal Constitutions, and that Things existing are distinguished by Nature into Species, by real Effences, according as we diffinguish them into Species by Names, we shall be liable to great Mistakes.

Difficulties
against a certain Number of
real Essences.

6.14. To diffinguish substantial Beings into Species, according to the usual Supposition, that there are certain precise Essences or Forms of things, whereby all the Individuals existing, are by Nature diffinguished into Species, these

Things are necessary:

6.15. First, To be assured, that Nature, in the Production of Things, always designs them to partake of certain regulated established Essences, which are to be the Models of all Things to be produced. This, in that crude Sense, it is usually proposed, would need some better Explication, before it can fully be assented to.

§. 16. Secondly, It would be necessary to know, whether Nature always attains that Effence, it defigns in the Production of Things. The irregular and monstrous Births, that in divers forts of Animals have been observed, will always give

us reason to doubt of one, or both of these.

g. 17.

6.17. Thirdly, It ought to be determined, whether those we call Monsters be really a distinct Species, according to the scholastick Notion of the Word Species; since it is certain, that every thing that exists, has its particular Constitution: And yet we find, that some of these monstrous Productions, have sew or none of those Qualities, which are supposed to result from and accompany the Essence of that Species, from whence they derive their Originals, and to which, by their Descent, they seem to belong.

6.18. Fourthly, The real Essences of those Things, which we distinguish into Species, and as so distinguished we name, ought to be known; i. e. we ought to have Ideas of them. But since we are ignorant in these four Points, the supposed real Essences of Things stand us not in stead for the distinguishing Substances into Species.

Our nominal Essences of Substances, not perfect Collections of Properties.

6.19. Fifthly, The only imaginable help in this Case would be, that having framed perfect complex Ideas of the Properties of things flowing from their different real Essences, we should thereby distinguish them into Species. But neither can this be done: for being ignorant of the real Effence it elf, it is impossible to know all those Properties that flow from it, and are so annexed to it, that any one of them being away, we may certainly conclude, that that Essence is not there, and so the thing is not of that Species. We can never know what are the precise Nuber of Properties depending on the real Essence of Gold, any one of which failing, the real Essence of Gold, and confequently Gold, would not be there, unless we knew the real Essence of Gold itself, and by that determined that Species. By the Word Gold here, I must be understood to defign a particular piece of Matter; v.g. the last Guinea that was coined. For if it should stand here in its ordinay Signification for that complex Idea, which I or any one else calls Gold; i.e. for the nominal Effence of Gold, it would be fargon: fo hard is it to shew the various Meaning and Imperfection of Words, when we have nothing elfe but Words to do it by.

6.20. By all which it is clear, That our distinguishing Substances into Species by Names, is not at all founded on their real Essences; nor can we pretend to range and determine 'em exactly into Species, according to internal essential Differences.

have need of general Words, tho' we know not the real Essences of Things; all we can do, is to our Name collect such a Number of simple Ideas, as by finds for.

Exami-

Examination, we find to be united together in Things existing, and thereof to make one complex Idea. Which tho'it be not the real Effence of any Substance that exists, is yet the specifick Essence, to which our Name belongs, and is convertible with it; by which we may at least try the Truth of these nominal Essences. For Example, there be that fay, that the Effence of Body is Extension: If it be so, we can never mistake in puting the Effence of any thing for the Thing itself. us then in Discourse put Extension for Body: and when we would fay, that Body moves, let us fay that Extension moves, and fee how it will look. He that should say, that one Extension by impulse moves another Extension, would, by the bare Expression, sufficiently shew the Absurdity of such a Notion. The Effence of any thing, in respect of us, is the whole complex Idea, comprehended and marked by that Name; and in Substances, besides the several distinct simple Ideas that make them up, the confused one of Substance, or of an unknown fupport and cause of their Union, is always a part: and therefore the Essence of Body is not bare Extension, but an extended folid thing, and so to say an extended folid thing moves, or impels another, is all one, and as intelligible as to fay Body moves or impels. Likewise to say, that a rational Animal is capable of Conversation, is all one, as to fay, a Man. But no one will fay, That Rationality is capable of Conversation, because it makes not the whole Essence to which we give the Name Man.

Our abstract Ideas are to us the Measures of Species; inflance, in that of Man. 6.22. There are Creatures in the World that have Shapes like ours, but are Hairy, and want Language, and Reason. There are Naturals amongst us, that have perfectly our Shape, but want Reason, and some of them Language too. There are Creatures, as 'tis said, (sit fides penes Authorem, but there appears no Contradiction

rhat there should be such) that with Language, and Reason, and a shape in other Things agreeing with ours, have hairy Tails; others where the Males have no Beards, and others where the Females have. If it be asked, whether these be all Men, or no, all of human Species; 'tis plain, the Question refers only to the nominal Essence: For those of them to whom the Desinition of the Word Man, or the complex Idea signify'd by that Name, agrees, are Men, and the other not. But if the Enquiry be made concerning the supposed real Essence; and whether the internal Constitution and Frame of these several Creatures be specifically different, it is wholly impossible for us to answer, no part of that going into our specifick Idea: only we have

have Reason to think, that where the Faculties, or cutward Frame fo much differs, the internal Constitution is not exactly the same: But what Difference in the internal real Constitution makes a specifick Disserence, it is in vain to enquire; whilst our Measures of Species, be, as they are, only our abstract Ideas, which we know; and not that internal Constitution, which makes no part of them. Shall the Difference of Hair only on the Skin, be a mark of a different internal specifick Constitution between a Changeling and a Drill, when they agree in Shape, and want of Reason and Speech? And shall not the want of Reason and Speech be a Sign to us of different real Constitutions and Species between a Changeling and a reasonable Man? And so of the rest, if we pretend that the Distinction of Species or Sorts is fixedly establish'd by the real Frame, and fecret Constitutions of Things.

6. 23. Nor let any one fay, that the Power of Species not Propagation in Animals by the mixture of Male distinguished and Female, and in Plants by Seeds, keeps the byGeneration.

supposed real Species distinct and entire. granting this to be true, it would help us in the Dislinction of the Species of things no farther than the Tribes of Animals and Vegetables. What must we do for the rest? But in those too it is not fufficient: for if History lye not, Women have conceived by Drills; and what real Species, by that measure, such a Production will be in Nature, will be a new Question: and we have Reason to think this not impossible, since Mules and Jumarts, the one from the mixture of an Ass and a Mare, the other from the mixture of a Bull and a Mare, are so frequent in the World. I once faw a Creature that was the Isfue of a Cat and a Rat, and had the plain Marks of both about it; wherein Nature appeared to have followed the Pattern of neither fort alone, but to have jumbled them both together. To which, he that shall add the monstrous Productions, that are so frequently to be met with in Nature, will find it hard, even in the race of Animals, to determine by the Pedigree of what Species every Animal's Issue is; and be at a loss about the real Effence, which he thinks certainly convey'd by Generation, and has alone a right to the specifick Name. But farther if the Species of Animals and Plants are to be distinguished only by Propagation, must I go to the Indies to see the Sire and Dam of the one, and the Plant from which the Seed was gather'd, that produc'd the other, to know whether this be a Tyger or that Tea?

§. 24. Upon the whole Matter, 'tis evident, No by fib.

that 'tis their own Collections of fentible Qua- flantial Forms.

E

lities

lities, that Men make the Essences of their several forts of Substances; and that their real internal Structures are not considered by the greatest part of Men, in the sorting them. Much less were any substantial Forms ever thought on by any, but those who have in this one part of the World learned the Language of the Schools; and yet those ignorant Men, who pretend not any insight into the real Essences, nor trouble themselves about substantial Forms, but are content with knowing Things one from another, by their sensible Qualities, are often better acquainted with their Differences, can more nicely distinguish them from their Uses, and better know what they may expect from each, than those learned quick sighted Men, who look so deep into them, and talk so considently of something more hidden and effential.

The specifick
Essences are
made by the
Mind.

6.25. But supposing that the real Essences of Substances were discoverable by those that would severely apply themselves to that Enquiry; yet we could not reasonably think, that the ranking of things under general Names, was regulated by those internal real Constitu-

tions, or any thing else but their obvious Appearances: since Languages, in all Countries, have been established long before Sciences. So that they have not been Philosophers, or Logicians, or such who have troubled themselves about Forms and Essences; that have made the general Names that are in use amongst the several Nations of Men: But those, more or less comprehensive Terms, have for the most part, in all Languages, received their Birth and Signification from ignorant and illiterate People, who forted and denominated Things, by those sensible Qualities they found in them, thereby to fignify them when absent, to others, whether they had an Occasion to mention a Sort or a particular Thing.

6. 26. Since then it is evident, that we fort Therefore and Name Substances by their nominal, and not their real Essences; the next thing to be conwery warious fidered is, how, and by whom these Essences and uncertain. come to be made. As to the latter, 'tis evident they are made by the Mind, and not by Nature: For were they Nature's Workmanship they could not be so various and different in several Men, as experience tells us they are. For if we will examine it, we shall not find the nominal Essence of any one Stecies of Substances, in all Men the same; no not of that, which of all others we are the most intimately acquainted with. could not possibly be, that the abstract Idea, to which the Name Man

Man is given, should be different in several Men, if it were of Nature's making; and that to one it should be Animal Rationale, and to another, Animal implume bites latis unguibus. He that annexes the Name Man to a complex Idea, made up of Sense and spontaneous Motion, joined to a Body of such a Shape, has thereby one Effence of the Species Man: And he that, upon farther Examination, adds Rationality, has another Essence of the Species he calls Man: By which means the same individual will be a true Man to the one, which is not so to the other. I think, there is fcarce any one will allow this upright Figure, fo well known, to be the effential difference of the Species Man; and yet how far Men determine of the forts of Animals, rather by their Shape, than Descent, is very visible; fince it has been more than once debated, whether feveral human Fætus's should be preserved, or received to Baptism, or no, only because of the difference of their outward Configuration, from the ordinary make of Children, without knowing whether they were not as capable of Reason as Infants cast in another Mould: some whereof, tho' of an approved Shape, are never capable of as much appearance of Reason, all their Lives, as is to be found in an Ape, or an Elephant; and never give any Signs of being acted by a rational Soul. Whereby it is evident, that the outward Figure, which only was found wanting, and not the Faculty of Reason, which no Body could know would be wanting in its due Seafon, was made effential to the human Species. The Learned Divine and Lawyer, must, on fuch Occasions, renounce his facred Definition of Animal Rationale, and substitute some other Essence of the human Spe-Monfieur Menage furnishes us with an Example worth the taking Notice of on this Occasion. When the Abbot of St. Martin, fays he, was born, he had so little of the Figure of a Man, that he befpake him rather a Monfler. Twas for some time under Deliberation, whether he should be baptized or no. However, he was baptized, and declared a Man provisionally, [till time should shew what he would prove.] Nature had moulded him so untowardly, that he was called all his Life the Abbot Malotrue, i. e. Ill-shaped. He was of Caen, Menagiana 27.8. This Child we fee was very near being excluded out of the Species of Man, barely by his Shape. He escaped very narrowly as he was, and 'tis certain a Figure a little more odly turned had cast him, and he had been executed as a thing not to be allowed to pass for a Man. And yet there can be no Reason given, why if the Lineaments of his Face had been a little altered, a rational Soul could not have been lodged in him, why a Vifage E fomefomewhat longer, or a Nose flatter, or a wider Mouth, could not have confissed, as well as the rest of his ill Figure, with such a Soul, such Parts as made him, disfigured as he was,

capable to be a Dignitary in the Church.

6.27. Wherein then, would I gladly know, confifts the precife and unmovable Boundaries of that Species? 'Tis plain, if we examine, there is no fuch Thing made by Nature, and established by her amongst Men. The real Essence of that, or any other fort of Subflances, 'tis evident we know not; and therefore are so undetermined in our nominal Essences, which we make our felves, that if feveral Men were to be asked, concerning some odly shaped Fates, as soon as born, whether it were a Man, or no, 'tis past doubt, one should meet with different Answers. Which could not happen, if the nostninal Esfences, whereby we limit and diffinguish the Species of Substances, were not made by Man, with some Liberty; but were exactly copied from precise Boundaries set by Nature, whereby it diffinguished all Substances into certain Species. Who would undertake to refolve what Species that Monster was of, which is mentioned by Licetus, lib. 1. c. 3. with a Man's Head and Hog's Body? Or those other, which to the Bodies of Men had the Heads of Beafts, as Dogs, Horfes &c. If any of thefe Creatures had lived, and could have spoke, it would have increafed the Difficulty. Had the upper part, to the middle, been of Human Shape, and all below Swine; had it been Murder to destroy it? or must the Bishop have been consulted, whether it were Man enough to be admitted to the Font, or no? As I have been told, it happened in France fome Years fince, in somewhat a like Case. So uncertain are the Boundaries of Species of Animals to us, who have no other Measures than the complex Ideas of our own collecting: And fo far are we from certainly knowing what a Man is; tho', perhaps it will be judged great Ignorance to make any doubt about it. And yet, I think, I may fay, that the certain Boundaries of that Species, are so far from being determined, and the precise Number of simple Ideas, which make the nominal Essence, so far from being fettled, and perfectly known, that very material Doubts may still arise about it: And I imagine, none of the Definitions of the Word Man, which we yet have, nor Defcriptions of that fort of Animal, are so perfect and exact, as to fatisfy a confiderate inquisitive Person; much less to obtain a general Confent, and to be that which Men would every where stick by, in the Decision of Cases, and determining of Life and Death, Baptism or no Baptism, in Productions that might happen.

6. 28. But though these nominal Essences of Substances are made by the Mind, they are not yet made so arbitrarily as those of mixed Modes. To the making of any nominal Essence, it is ne-

But not so arbitrary as mixed Medes.

ceffary, First, That the Ideas whereof it confifts, have such an Union as to make but one Idea, how compounded foever. Secondly, That the particular Ideas fo united, be exactly the fame, neither more nor less. For if two abstract complex Ideas, differ either in Number or Sorts, of their component Parts, they make two different, and not one and the same Essence. In the first of these, the Mind in making its complex Ideas of Substances, only follows Nature; and puts none together, which are not supposed to have an Union in Nature. No body joins the Voice of a Sheep, with the Shape of a Horse; nor the Colour of Lead, with the Weight and Fixedness of Gold, to be the complex Ideas, of any real Substances; unless he has a mind to fill his Head with Chimera's, and his Discourse with unintelligible Words. Men observing certain Qualities always joined and existing together, therein copied Nature; and of Ideas so united, made their complex ones of Substances. For the' Men may make what complex Ideas they please, and give what Names to them they will; yet if they will be understood, when they speak of things really existing, they must in some degree, conform their Ideas to the Things they would speak of: Or else Mens Language will be like that of Babel; and every Man's Words being intelligible only to himself, would no longer serve to Conversation, and the ordinary Astairs of Life, if the Ideas they stand for be not some way answering the common appearences and agreement of Substances, as they really exist.

§. 29. Secondly, Though the Mind of Man, The very imin making its complex Ideas of Substances, never perfect.

puts any together that do not really, or are not

fupposed to co-exist; and so it truely borrows that Union from Nature: Yet the Number it combines, depends upon the varicus Care, Industry or Fancy of him that makes it. Men generally content themselves with some few sensible obvious Qualities; and often, if not always, leave out others as material, and as firmly united, as those that they take. Of sensible Substances there are two forts; one of organized Bodies, which are propagated by Seed; and in these, the Shape is that, which to us is the leading Quality, and most characteristical Part, that determines the Species: And therefore in Vegetables and Animals, an extended solid Substance of such a certain sigure usually serves the turn. For however some Men seem

to prize their Definition of Animal Rationale, yet should there a Creature be found, that had Language and Reason, but partook not of the usual Shape of a Man, I believe it would hardly pass for a Man, how much soever it were Animal Rationale. And if Balaam's Ass had, all his Life, discoursed as rationally as he did once with his Master, I doubt yet, whether any one would have thought him worthy the Name Man, or allowed him to be of the same Species with himself. As in Vegetables and Animals 'tis the Shape, fo in most other Bodies, not propagated by Seed, 'tis the Colour we most fix on, and are most led by. Thus where we find the Colour of Gold, we are apt to imagine all the other Qualities, comprehended in our complex Idea, to be there also: and we commonly take these two obvious Qualities, viz. Shape and Colour, for fo prefumptive Ideas of several Species, that in a good Picture, we readily fay, this is a Lion, and that a Role; this is a Gold, and that a Silver Goblet, only by the different Figures and

Colours, represented to the Eye by the Pencil.

6. 30. But though this ferves well enough for Which get groß and confused Conceptions, and unaccurate ferrue for come ways of Talking and Thinking; yet Men are far mon Converse. enough from having agreed on the precise number of simple Ideas or Qualities, belonging to any fort of Things, signified by its Name. Nor is it a wonder, fince it requires much Time, Pains and Skill, ffri& Enquiry, and long Examination, to find out what, and how many those Simple Ideas are, which are constantly and inseparably united in Nature, and are always to be found together in the same Subject. Most Men wanting either Time, Inclination, or Industry, enough for this, even to fome tolerable degree, content themselves with some few obvious, and outward Appearances of Things, thereby readily to diffinguish and fort them for the common Affairs of Life. And fo, without farther Examination, give them Names, or take up the Names already in use. Which, though in common Conversation they pass well enough for the Signs of some few obvious Qualities co-existing, are yet far enough from comprehending, in a fettled Signification, a precise Number of simple Ideas; much less all those which are united in Nature. He that shall consider, after so much shir about Genus and Species, and such a deal of Talk of specifick Differences, how few Words we have yet fettled Definitions of, may, with Reason, imagine, that those Forms, which there hath been fo much Noise made about, are only Chimeras, which give us no Light into the specifick Natures of Things. And he that fhall.

shall consider, how far the Names of Substances are from having Significations, wherein all who use them do agree, will have Reason to conclude, that though the nominal Essences of Substances are all supposed to be copied from Nature, yet they are all, or most of them, very imperfect. Since the Composition of those complex Ideas are, in several Men, very different; and therefore, that these Boundaries of Species, are as Men, and not as Nature makes them, if at least there are in Nature any fuch prefixed Bounds. 'Tis true, that many particular Substances are so made by Nature, that they have agree and likeness one with another, and so afford a Four being ranked into Sorts. But the forting of Thirgs by us, or the making of determinate Species; being in order on aming and comprehending them under general Terms, I cannot fie how it can be properly faid, that Nature fers the Boundaries of the Species of Things: Or if it be so, our Boundaries of Species are not exactly conformable to those in Nature. For we having need of general Names for present use, stay not for a perfect Discovery of all those Qualities, which would best shew us their most material Differences and Agreements; but we ourselves divide them, by certain obvious Appearances, into Species, that we may the easier, under general Names, communicate our Thoughts about them. For having no other Knowledge of any Substance, but of the simple Ideas that are united in it; and observing several particular Things to agree with others, in feveral of those simple Ideas, we make that Collection our specifick Idea, and give it a general Name; that in recording our own Thoughts, and in our Discourse with others, we may in one short Word design all the Individuals that agree in that complex Idea, without enumerating the simple Ideas that make it up; and so not waste our Time and Breath in tedious Descriptions; which we see they are fain to do, who would discourse of any new fort of Things, they have not yet a Name for.

6. 31. But however, these Species of Substances pass well enough in ordinary Conversation, it is plain, that this complex Idea, wherein they observe several Individuals to agree, is by different Men, made very differently; by some more, and others less accurately. In some, this complex Idea contains a greater, and in others a smaller Number

contains a greater, and in others a smaller Number of Qualities; and so is apparently such as the Mind makes it. The yellow shining Colour makes Gold to Children; others add Weight, Malleableness, and Fusibility; and others yet other Qualities,

which

Estences of

Species under

the same

different.

Name very

which they find joined with that yellow Colour, as conflantly as its Weight and Fusibility: For in all these, and the like Qualities, one has as good a Right to be put into the complex Idea of that Substance, wherein they are all joined, as another. And therefore different Men leaving out or putting in several simple Ideas, which others do not, according to their various Examination, Skill, or Observation of that Subject, have different Essences of Gold; which must therefore be of their own, and not of Nature's making.

The more general our Ideas are, the more incomplete and partial they are. 6-32. If the Number of simple Ideas that make the nominal Essence of the lowest Species, or first forting of Individuals, depends on the Mind of Man, variously collecting them, it is much more evident that they do so, in the more comprehenfive Classis, which, by the Masters of Logick are called Genera. These are complex Ideas design-

edly imperfect: And 'tis visible at first fight, that several of those Qualities that are to be found in the Things themselves, are purposely left out of generical Ideas. For as the Mind, to make general Ideas, comprehending feveral particulars, leaves out those of Time, and Place, and such other that make them incommunicable to more than one Individual; fo to make other vet more general Ideas, that may comprehend different forts, it leaves out those Qualities that distinguish them, and puts into its new Collection, only fuch Ideas, as are common to feveral forts. The same Convenience that made Men express several Parcels of yellow Matter coming from Guinea and Peru, under one Name, fets them also upon making of one Name, that may comprehend both Gold and Silver, and some other Bodies of different forts. This is done by leaving out those Qualiries, which are peculiar to each fort; and retaining a complex Idea made up of those that are common to them all. To which the Name Metal being annexed, there is a Genus conflituted; the Effence whereof being that abstract Idea, containing only Malleableness and Fusibility, with certain Degrees of Weight and Fixedness, wherein some Bodies of several Kinds agree, leaves out the Colour, and other Qualities peculiar to Gold and Silver, and the other forts comprehended under the Name Metal. Whereby it is plain, that Men follow not exactly the Patterns fet them by Nature, when they make their General Ideas of Substances; fince there is no Body to be found, which has barely Malleableness and Fusibility in it, without other Qualities as inseparable as those. But Men, in making their general Ideas, feeking more the convenience of Language and

quick

quick dispatch, by shorr and comprehensive Signs, than the true and precise Nature of Things, as they exist, have, in the framing their abstract Ideas, chiefly pursued that end, which was to be furnished with store of general and variously comprehensive Names. So that in this whole Business of General and Stecies, the Genus, or more comprehensive, is but a partial Conception of what is in the Species, and the Species, but a partial Idea of what is to be found in each Individual. If therefore any one will think, that a Man, and a Horse, and an Animal, and a Plant, &c. are diffinguished by real Effences made by Nature, he must think nature to be very liberal of these real Effences, making one for Body, another for an Animal, and another for a Horse; and all these Essences liberally bestowed upon Bucephalus. But if we would rightly confider what is done, in all these Genera and Species, or Sorts, we should find, that there is no new Thing made, but only more or lefs comprehensive Signs, whereby we may be enabled to express, in a few Syllables, great Numbers of particular Things, as they agree in more or less general Conceptions, which we have framed to that purpose. In all which, we may observe, that the more general Term is always the Name of a less complex Idea; and that each Genus is but a partial Conception of the Species comprehended under it. So that if these abstract general Ideas be thought to be complete, it can only be in respect of a certain established Relation between them and certain Names, which are made use of to fignify them; and not in respect of any thing existing, as made by Nature.

§. 33. This is adjusted to the true end of Speech, which is to be the easiest and shortest way of communicating our Notions. For thus he, that to the end of would make and discourse of Things, as they

agreed in the complex Idea of Extension and

Solidity, needed but use the Word Body to denote all such. He that to these would join others, signified by the Words Lise, Sense and spontaneous Motion, needed but use the word Animal, to signify all which partook of those Ideas: and he that had made a complex Idea of a Body, with Lise, Sense, and Motion, with the Faculty of Reasoning, and a certain Shape joined to it, needed but use the short Monosyllable Man, to express all particulars that correspond to that complex Idea. This is the proper business of Genus and Species: And this Men do, without any Consideration of real Issues or substantial Forms, which come not within the reach of our Knowledge, when we think of those things; nor within the

Signification of our Words, when we discourse with others. 6. 34. Were I to talk with any one of a fort of Birds, I lately faw in St. James's Park, about three Instance in or four Foot High, with a Covering of fomething between Feathers and Hair, of a dark brown Colour, without Wings, but in the Place thereof, two or three little Branches. coming down like Sprigs of Spanish Broom; long great Legs, with Feet only of three Claws, and without a Tail; I mult make this Description of it, and so may make others understand me: But when I am told, that the Name of it is Cassuaris, I may then use that Word to stand in discourse for all my complex Idea mentioned in that Description; though by that word which is now become a specifick Name, I know no more of the real Essence, or Constitution of that fort of Animals, than I did before; and knew probably as much of the Nature of that Species of Birds, before I learned the Name, as many Englistemen do of Swans, or Herons, which are specifick Names,

Men determine the forts.

Men determine the forts.

Species, 'tis plain, that they who make those

very well known of forts of Birds common in England.

abstract Ideas, which are the nominal Essences, do thereby make the Species, or Sort. Should there be a Body found, having all the other Qualities of Gold, except Malleableness, 'twould, no doubt, be made a Question whether it were Gold or no; i. e. whether it were of that Species. could be determined only by that abstract Idea, to which every one annexed the Name Gold; fo that it would be true Gold to him, and belong to that Species who included not Mallcableness in his nominal Essence, signified by the Sound Gold; and on the other fide, it would not be true Gold, or of that Stecies to him, who included Malleableness in his specifick Idea. And, who, I pray, is it, that makes these diverse Species, even under one and the same Name, but Men that make two different abstract Ideas, confisting not exactly of the same Collection of Qualities? Nor is it a mere Supposition to imagine, that a Body may exist, wherein the other obvious Qualities of Gold may be without Malleableness; fince it is certain, that Gold itself will be sometimes so eager, (as Artists call it) that it will as little endure the Hammer, as Glass itself. What we have said of the putting in, or leaving Malleableness out of the complex Idea, the Name Gold is by any one annexed to, may be faid of its peculiar Weight, Fixedness.

Fixedness, and several other the like Qualities: For whatsoever is left out, or put in, 'tis still the complex Idea, to which that Name is annexed, that makes the Species: and as any particular parcel of Matter answers that Idea, so the Name of the fort belongs truly to it; and it is of that Species. thus any thing is true Gold, perfect Metal. All which Determination of the Species, 'tis plain, depends on the Understanding of Man, making this or that complex Idea.

6. 36. This then, in short, is the Case: Nature makes many particular Things which do agree one with another, in many fensible Quali-

Nature makes the Similitude.

ties, and probably too, in their internal Frame and Constitution: but 'tis not this real Essence that distinguishes them into Species; 'tis Men, who, taking occasion from the Qualities they find united in them, and wherein they obferve often feveral Individuals to agree, range them into forts, in order to their Naming, for the convenience of comprehensive Signs; under which Individuals, according to their Conformity to this or that abstract Idea, come to be ranked as under Enfigns; fo that this is of the Blue, that the Red Regiment; this is a Man, that a Drill: And in this, I think, confifts the whole business of Genus and Species.

6. 37. I do not deny, but Nature, in the constant Production of particular Beings, makes them not always new and various. but very much alike, and of kin one to another: But I think it nevertheless true, that the Boundaries of the Species, wherely Men fort them, are made by Men; fince the Essences of the Species, distinguished by different Names, are, as has been proved, of Man's making, and feldom adequate to the internal Nature of the Things they are taken from. So that we may truly fay, fuch a manner of forting of Things, is the Work-

manship of Men.

6. 38. One thing, I doubt not, but will feem very strange in this Doctrine; which is, that from what has been faid, it will follow, that each absence. stratt Idea, with a Name to it, makes a distinct

Each abstrast Idea is an Ef-

Species. But who can help it, if Truth will have it so? For so it must remain till some body can shew us the Species of Things, limited and diffinguished by fomething else; and let us fee, that general Terms fignify not our abstract Ideas, but something different from them. I would fain know, why a Shock and a Hound, are not as distinct Species, as a Spaniel and an Elephant. We have no other Idea of the different Essence of an Elephant and a Spaniel, than we have of the different Effence of a Shock and a Hound; all the effential difference, whereby we know and diffinguish them one from another, confishing only in the different Collection of simple *Ideas*, to which we have given those different Names.

Genera and Species are in order to naming. 6. 39. How much the making of Species and Genera is in order to general Names, and how much general Names are necessary, if not to the Being, yet at least to the compleating of a Species, and making it pass for such, will appear, besides what has been said above concerning Ice and

Water, in a very familiar Example. A filent and a striking Watch, are but one Species, to those who have but one Name for 'em: but he that has the Name Watch for one, and Clock for the other, and distinct complex Ideas, to which those Names belong, to him they are different Species. It will be faid, perhaps, that the inward Contrivance and Constitution is different between these two, which the Watch-maker has a clear Idea of. And yet, 'tis plain, they are but one Species to him, when he has but one Name for them. For what is sufficient in the inward Contrivance, to make a new Species? There are some Watches that are made with four Wheels, others with five: Is this a specifick difference to the Workman? Some have Strings and Physics, and others none; some have the Balance loose, and others regulated by a spiral Spring, and others by Hogs Brissles: Are any, or all of these enough to make a specifick Difference to the Workman, that knows each of these, and several other different Contrivances, in the internal Constitutions of Watches? 'Tis certain, each of these hath a real Difference from the rest: But whether it be an effential, a specifick Difference or no, relates only to the complex Idea, to which the Name Watch is given: as long as they all agree in the Idea which that Name stands for, and that Name does not as a generical Name comprehend different Species under it, they are not effentially nor specifically different. But if any one will make minuter Divisions from Differences that he knows in the internal Frame of Watches, and to fuch precise complex Ideas, give Names that shall prevail, they will then be new Species to them, who have those Ideas with Names to them; and can, by those Differences, distinguish Watches into these several sorts, and then Watch will be a generical Name. But yet they would be no distinct Species to Men, ignorant of Clock-work, and the inward Contrivances of Watches, who had no other Idea but the outward Shape and Bulk, with the marking of the Hours by the Hand. For to them all those other Names would be but

but fynonymous Terms for the same *Idea*, and signify no more, nor no other thing but a *Watch*. Just thus, I think, it is in natural Things. No Body will doubt, that the Wheels, or Springs (if I may so say) within, are different in a rational Man, and a Changeling, no more than that there is a Difference in the Frame between a Drill and a Changeling. But whether one or both these Differences be essential, or specifical, is only to be known to us, by their Agreement or Disagreement with the complex *Idea* that the Name Man stands for: For by that alone can it be determined, whether one, or both, or neither of those be a Man, or no.

6. 40. From what has been before faid, we may fee the Reason why, in the Species of artificial Things there is generally less Confusion and Uncertainty, than in Natural. Because an artificial Thing being a Production of Man,

Species of artificial Things less confused than natu, al.

which the Artificer defign'd, and therefore well knows the *Idea*, of, the Name of it is supposed to stand for no other *Idea*, nor to import any other Essence, than what is certainly to be known, and easy enough to be apprehended. For the *Idea*, or Essence, of the several forts of artificial Things, consisting, for the most part, in nothing but the determinate Figure of sensible Parcs; and sometimes Motion depending thereon, which the Artificer sashions in Matter, such as he finds for his Turn, it is not beyond the reach of our Faculties to attain a certain *Idea* thereof; and so settle the Signification of the Names whereby the Species of artificial Things are distinguished, with less Doubt, Obscurity and Equivocation, than we can in Things natural, whose Differences and Operations depend upon Contrivances, beyond the reach of our Discoveries.

§. 41. I must be excused here, if I think, artificial Things are of distinct Species, as well as natural: Since I find they are as plainly and orderly ranked into sorts, by different abstract Ideas find Species, with general Names annexed to them, as distinct one from another as those of natural Substances. For why should we not think a Watch, and Pistol, as distinct Species one from another, as a Horse, and a Deg, they being expressed in our Minds by distinct Ideas, and to others, by distinct Appellations?

9. 42. This is farther to be observed concerning Subflances, that they alone of all our several forts of Ideas, have particular or profer Names, whereby one only particular thing is signify'd. For Names.

Because in simple Ideas, Modes, and Relations, it seldom Vol. II.

happens that Men have occasion to mention often this, or that particular, when it is absent. Besides, the greatest part of mixed Modes, being Actions which perish in their Birth, are not capable of a lasting Duration, as Substances, which are the Actors; and wherein the simple *Ideas* that make up the complex *Ideas* designed by the Name, have a lasting Union.

6. 43. I must beg Pardon of my Reader, for having dwelt so long upon this Subject, and pertreat of Words. haps, with some Obscurity. But I desire it may

be confidered, how difficult it is, to lead another by Wards into the Thoughts of Things, Stripp'd of those streifical Differences we give 'em: Which things, if I name not, I fay nothing; and if I do name them, I thereby rank'em into some fort, or other, and suggest to the Mind the usual abstract Idea of that Species; and so cross my purpose. For to talk of a Man, and to lay by, at the same time, the ordinary Signification of the Name Man, which is our complex Idea, ulually annexed to it; and bid the Reader confider Man, as he is in himself, and as he is really distinguished from others, in his internal Constitution, or real Essence, that is, by something, he knows not what, looks like trifling: and yet thus one must do, who would speak of the supposed real Essences and Species of Things, as thought to be made by Nature, if it be but only to make it understood, that there is no fuch thing fignified by the general Names which Substances are called by. But because it is difficult by known familiar Names to do this, give me leave to endeavour by an Example, to make the different Consideration the Mind has of specifick Names and Ideas, a little more clear; and to shew how the complex Ideas of Modes are referred fometimes to Archetypes in the Minds of other intelligent Beings; or, which is the fame, to the Signification annexed by others to their received Names; and fometimes to no Archetypes at all. Give me leave also to shew how the Mind always refers its Ideas of Substances, either to the Subffances themselves, or to the Signification of their Names, as to the Arcketypes; and also to make plain the Nature of Species, or forting of Things, as apprehended, and made use of by us; and of the Effences belonging to those Species, which is, perhaps, of more Moment, to discover the Extent and Certainty of our Knowledge, than we at first imagine.

Inflance of mixed Modes a grown Man, with a good Understanding, but in a strange Country, with all Things and Niouph.

6. 44. Let us suppose Adam in the State of a grown Man, with a good Understanding, but in a strange Country, with all Things new, and unknown about him; and no o-

ther

ther Faculties, to attain the Knowledge of them, but what one of this Age has now. He observes Lamech more Melancholy than usual, and imagines it to be from a Suspicion he has of his Wife Adah, (whom he most ardently loved) that she had too much Kindness for another Man. Adam Discourses these his Thoughts to Eve, and defires her to take care that Adah commit not Folly: And in these Discourses with Eve. he makes use of these two new Words, Kinneah and Niouph. In time, Adam's Mistake appears, for he finds Lamcel's Trouble proceeded from having killed a Man: But yet the two Names, Kinneah and Niouph; the one standing for Suspicion, in a Husband, of his Wife's Disloyalty to him, and the other, for the A& of committing Disloyalty, lost not their dislinct Significations. It is plain then, that here were two diffinct complex Ideas of mixed Modes, with Names to them, two distinct Species of Actions effentially different; I ask, wherein confished the Essences of these two distinct Species of Actions? And 'tis plain, it confisted in a precise Combination of simple Ideas, different in one from the other. I atk, whether the complex Idea in Adam's Mind, which he called Kinneah, were adequate or no? And it is plain, it was; for it being a Combination of simple Ideas, which he without any regard to any Archetype, without respect to any thing as a Pattern, voluntarily put together, abstracted and gave the Name Kinneah to, to express in short to others, by that one found, all the simple Ideas contained and united in that complex one; it must necessarily follow, that it was an adequate Idea. His own Choice having made that Combination, it had all in it he intended it should, and so could not but be perfect, could not but be adequate, it being referred to no other Archetype, which it was supposed to represent.

9. 45. These Words, Kinneah and Niouph, by degrees grew into common Use; and then the Case was somewhat altered. Adam's Children had the same Faculties, and thereby the same Power that he had, to make what complex Ideas of mixed Modes they pleased in their own Minds; to abstract them, and make what Sounds they pleased, the Signs of them: But the use of Names being to make our Ideas within us known to others, that cannot be done, but when the same Sign stands for the same Idea in two who would communicate their Thoughts, and Discourse together. Those therefore of Adam's Children that found these two Words, Kinneah and Niouph, in samiliar use, could not take them for insignificant Sounds; but must needs conclude, they stood for something, for certain Ideas,

abaract Ideas, they being general Names, which abaract Ideas were the Effences of the Species distinguished by those Names. If therefore they would use these Words as Names of Species already established and agreed on, they were obliged to conform the Ideas, in their Minds, fignified by these Names, to the Ideas, that they flood for in other Mens Minds, as to their Patterns and Archety jes; and then indeed their Ideas of these complex Modes were liable to be inadequate, as being very apt (especially those that confisted of Combinations of many simple Ideas) not to be exactly conformable to the Ideas in other Mens Minds, using the same Names: tho' for this, there be usually a Remedy at Hand, which is, to ask the meaning of any Word we understand not, of him that uses it: it being as impossible to know certainly what the Words Jealoufy and Adultery (which I think answer TE P and TEI) stand for in another Man's Mind, with whom I would discourse about them; as it was impossible, in the beginning of Language, to know what Kinneah and Niouph flood for in another Man's Mind, withcut Explication, they being voluntary Signs in every one.

Inflances of Subplances in Zulab. 6. 46. Let us now alto confider after the fame. Manner, the Names of Substances, in their first Application. One of *Adam's* Children roving in the Mountains, lights on a glittering Substance,

which pleafes his Eye, home he carries it to Adam, who, upon Confideration of it, finds it to be hard, to have a bright vellow Colour, and an exceeding great Weight. Thefe, perhaps at first, are all the Qualities he takes Notice of in it, and abilitacting this complex Idea, confifting of a Substance having that peculiar bright Yellowness, and a Weight very great in Proportion to its Bulk, he gives it the Name Zahab, to denominate and mark all Substances that have these sensible Qualities in them. 'Tis evident now that, in this case, Adam acts quite differently from what he did before, in forming those Lives of mixed Modes, to which he gave the Name Kinneah and Niouph. For there he put Ideas together, only by his own Imagination, not taken from the Existence of any thing; and to them he gave Names to denominate all Things, that should happen to agree to those his abstract Ideas, withour confidering whether any fuch thing did exist, or no; the Standard there was of his own making. But in the forming his Tica of this new Substance he takes the quite contrary Course; here he has a Standard made by Nature; and therefore beingto represent that to himself, by the Idea he has of it, even when it is abient, he puts in no simple Idea into his complex

one, but what he has the Perception of from the thing itself. He takes care that his *Idea* be conformable to this *Archetype*, and intends the Name should stand for an *Idea* so conformable.

6. 47. This piece of Matter, thus denominated Zahab by Adam, being quite different from any he had feen before, no Body, I think, will deny to be a diffine Species, and to have its peculiar Effence; and that the Name Zahab is the mark of the Species, and a Name belonging to all Things partaking in that Essence. But here it is plain, the Essence Alam made the Name Zakab stand for, was nothing but a Body hard, shining, yellow, and very heavy. But the inquisitive Mind of Man, not content with the Knowledge of these, as I may fav, fuperficial Qualities, puts Adam upon further Examination of this Matter. He therefore knocks, and beats it with Flints, to fee what was discoverable in the Inside: He finds it yield to Blows, but not easily separate into Pieces: he finds it will bend without breaking. Is not now Ductility to be added to his former Idea, and made part of the Effence of the Species that Name Zakab stands for? Farther Trials discover Fusibility, and Fixedness. Are not they also, by the same Reason, that any of the others were, to be put into the complex Idea, fignified by the Name Zehab? If not, what Reason will there be shewn more for the one than the other? If these must, then all the other Properties, which any farther Trials shall discover in this Matter, ought by the same Reason to make a part of the Ingredients of the complex Idea, which the Name Zzhab stands for, and so by the Essence of the Species, marked by that Name. Which Properties, because they are endless, it is plain, that the *Idea* made after this Fashion by this Archetype, will be always inadequate.

6. 48. But this is not all, it would also follow, that the Names of Substances would not only have, (as in Truth they have) but would also be supposed to have different Significations, as us d by different Men, which would very much

Their Ideas imperfict, and therefore various.

cumber the Use of Language. For if every distinct Quality, that were discovered in any Matter by any one, were supposed to make a necessary part of the complex Idea, signified by the common Name given it, it must follow, that Men must suppose the same Word to signify different Things in different Men: since they cannot doubt, but different Men may have discovered several Qualities in Substances of the same Denomination, which others know nothing of.

Fз

Therefore to fix their Species, a real Effence is supposed.

6.49. To avoid this therefore, they have fupposed a real Essence belonging to every Species, from which these Properties all flow, and would have their Name of the Species stand for that. But they not having any *Idea* of that real Essence in Substances, and their Words signifying

nothing but the *Ideas* they have, that which is done by this Attempt, is only to put the Name or Sound, in the Place and Stead of the thing having that real Effence, without knowing what the real Effence is; and this is that which Men do, when they speak of Species of Things, as supposing them made by Nature and difficulties that they are all effects as

Nature, and diffinguished by real Effences.

Which Supposition is of no use. 6. 50. For let us confider, when we affirm, that all Gold is fixed, either it means that Fixedness is a part of the Definition, part of the nominal Effence the Word Gold stands for; and so this Affirmation, All Gold is fixed, contains

nothing but the Signification of the Term Gold. means, that Fixedness not being a part of the Definition of the Word Gold, is a Property of that Substance itself: in which Case, it is plain, that the Word Gold stands in the Place of a Substance, having the real Essence of a Species of Things, made by Nature. In which way of Substitution, it has fo confused and uncertain a Signification, that though this Proposition, Gold is fixed, be in that Sense an Affirmation of something real; yet 'tis a Truth will always fail us in its particular Application, and fo is of no real Use nor Certainty. For let it be never fo true, that all Gold, i. e. all that has the real Effence of Gold, is fixed, What ferves this for, whilst we know not in this Sense, what is, or is not Gold? For if we know not the real Essence of Gold, 'tis impossible we should know what parcel of Matter has that Essence, and so whether it be true Gold or no.

6.51. To conclude; What Liberty Adam had at first to make any complex Ideas of mix'd Modes, by no other Pattern, but by his own Thoughts, the same have all Men ever fince had. And the same Necessity of conforming his Ideas of Substances to Things without him, as to Archetypes made by Nature, that Adam was under, if he would not wilfully impose upon himself, the same are all Men ever since under too. The same Liberty also, that Adam had of affixing any new Name to any Idea, the same has any one still, (especially the beginners of Languages, if we can imagine any such only with this Difference, that in Places, where

Men

Men in Society have already established a Language amongst them, the Signification of Words are very warily and sparingly to be altered. Because Men being furnished already with Names for their Ideas, and common Use having appropriated known Names to certain Ideas, an affected Misapplication of them cannot but be very ridiculous. He that hath new Notions, will, perhaps, venture sometimes on the coining new Terms to express them: But Men think it a Boldness, and 'tis uncertain, whether common Use will ever make them pass for current. But in Communication with others, it is necessary, that we conform the Ideas we make the Vulgar Words of any Language stand for, to their known proper Significations, (which I have explained at large already) or else to make known that new Signification we apply them to.

CHAP. VII.

Of Particles.

6. 1. Esides Words, which are Names of Ideas in the Mind, there are a great many others that are made use of, to signify the Connexion that the Mind gives to Ideas, or Propositions, one with another. The

Particles connect Pats, or whole Sentences together.

Mind in communicating its Thought to others, does not only need Signs of the *Ideas* it has then before it, but others also, to shew or intimate some particular Action of its own, at that time, relating to those *Ideas*. This it does several ways; as, *Is*, and *Is not*, are the general Marks of the Mind assuming or denying. But besides Affirmation, or Negation, without which there is in Words no Truth or Falshood, the Mind does, in declaring its Sentiments to others, connect not only the Parts of Propositions, but whole Sentences one to another, with their several Relations and Dependencies, to make a coherent Discourse.

6. 2. The Words, whereby it fignifies what Connection it gives to the feveral Affirmations and Negations, that it unites in one continu'd Reasoning or Narration, are generally called

In them confifts the Art of well speaking.

Particles; and its in the right Use of these, that more particularly consists the clearness and beauty of a good Stile.

To think well, it is not enough, that a Man has Ideas clear and distinct in his Thoughts, nor that he observes the Agreement, or Disagreement of some of them; but he must think in train, and observe the dependence of his Thoughts and Reasonings, one upon another: And to express well such methodical and rational Thoughts, he must have Words to show what Connection, Restriction, Distinction, Opposition, Empkasis, &c. he gives to each respective part of his Discourse. To mistake in any of these, is to puzzle, instead of informing his Hearer: and therefore it is, that those Words, which are not truly, by themselves, the Names of any Ideas, are of such constant and indispensible use in Language, and do much contribute to Mens well expressing themselves.

They sheave awhat Relation the Mind gives to its onen Thoughts.

6. 3. This part of Grammar has been, perhaps, as much neglected, as some others over-diligently cultivated. 'Tis easy for Men to write, one after another, of Cases and Genders, Meods and Tenses, Gerunds and Supines: In these and the like, there has been great Dili-

gence used; and Particles themselves, in some Languages, have been with great shew of exactness, ranked into their several Orders. But though Prepositions and Conjunctions, &c. are Names well known in Grammar, and the Particles contained under them carefully ranked into their distinct Subdivisions; yet he who would shew the right Use of Particles, and what Significancy and Force they have, must take a little more Pains, enter into his own Thoughts, and observe nicely the

feveral Postures of his Mind in discoursing.

§. 4. Neither is it enough, for the explaining of these Words, to render them, as is usually in Dictionaries, by Words of another Tongue which came nearest to their Signification: For what is meant by them, is commonly as hard to be understood in one, as another Language. They are all marks of some Action or Intimation of the Mind; and therefore to understand them rightly, the several Views, Postures, Stands, Turns, Limitations, and Exceptions, and several other Thoughts of the Mind, for which we have either none, or very deficient Names, are diligently to be studied. Of these, there are a great Variety, much exceeding the Number of Particles, that most Languages have to express them by; and therefore it is not to be wondred, that most of these Particles have divers, and sometimes almost opposite Significations. In the Hebrew Tengue, there is a Particle consisting but of one

fingle Letter, of which there are reckoned up, as I remember, Seventy, I am fure above Fifty feveral Significations.

6. 5. BUT is a Particle, none mor familiar in our Language; and he that fays it is a difcretive Conjunction, and that it answers Sed in Latin, or Mais in French, thinks he has sufficiently explained

it. But it feems to me to intimate feveral Relations, the Mind gives to the feveral Propositions or Parts of them, which it joins by this Monosyllable.

First, BUT to say no more: Here it intimates a Stop of the Mind, in the Course it was going, before it came to the

end of it.

Secondly, I faw BUT two Plants: Here it shews, that the Mind limits the Sense to what is expressed, with a Negation of all other.

Thirdly, You Pray; BUT it is not that GOD would

bring you to the true Religion.

Fourthly, BUT that he would confirm you in your own: The first of these BUTS intimates a Supposition in the Mind of something otherwise than it should be; the latter shews, that the Mind makes a direct Opposition between that, and what goes before it.

Fifthly, All Animals have Sense; BUT a Dog is an Animal: Here it fignishes little more, but that the latter Proposition is joined to the former, as the Minor of a

Syllogifm.

other Significations of this Particle, if it were my Business to examine it in its full Latitude, and consider it in all the Places it is to be found; which if one should do, I doubt, whether in all those Manners it is made use of, it would deferve the Title of Discretive, which Grammarians give to it. But I intend not here a full Explication of this fort of Signs. The Instances I have given in this one, may give occasion to reflect upon their Use and Force in Language, and lead us into the Contemplation of several Actions of our Minds in discoursing, which it has found a way to intimate to others by these Particles, some whereof constantly, and others in certain Constructions, have the Sense of a whole Sentence contained in them.

CHAP VIII.

Of Abstract and Concrete Terms.

Abstract Terms not predicable one of another, and why.

HE ordinary Words of Language, and our common use of 'em, would have given us light into the Nature of our Ideas, if they had been but confidered with Attention. The Mind, as has been shewn, has a Power to abstract its Ideas, and so they

become Effences, general Effences, whereby the forts of Things are diffinguished. Now each abstract Idea being diflinet, fo that of any two the one can never be the other, the Mind will, by its intuitive Knowledge, perceive their difference; and therefore in Propositions, no two whole Ideas can ever be atfirmed one of another. This we see in the common use of Language, which permits not any two abstract Words, or Names of abstract Ideas, to be effirmed one of another. For how near of kin foever they may feem to be, and how certain foever it is, that Man is an Animal, or Rational, or White, yet every one, at first hearing, perceives the Falshood of these Propositions; Humanity is Animality, or Rationality, or Whiteness: And this is as evident as any of the most allowed Maxims. All our Affirmations then are only inconcrete, which is the affirming, not one abstract Idea to be another, but one abstract Idea to be joined to another; which abstract Ideas, in Substances, may be of any fort; in all the rest, are little else but of Relations; and in Substances, the most frequent are of Powers; v.g. a Man is White, fignifies, that the thing that has the Effence of a Man, has also in it the Effence of Whiteness, which is nothing but a Power to produce the Idea of Whiteness in one, whose Eyes can discover ordinary Objects; or a Man is rational, fignifies, that the same thing that bath the Essence of a Man, hath also in it the Essence of Rationality, i.e. a Power of Reasoning.

Ideas.

6. 2. This diffinction of Names, shews us They shew the also the difference of our Ideas: For if we obdifference of our serve them, we shall find, that our Simple Ideas have all Abstract as well as Concrete Names: The one whereof is (to speak the

Lan-

Language of Grammarians) a Substantive, the other an Adjective; as Whiteness, White; Sweetness, Sweet. The like also holds in our Ideas of Modes and Relations; as Justice, Just; Equality, Equal; only with this difference, that some of the Concrete Names of Relations, amongst Men chiefly, are Substantives; as Paternitas, Pater; whereof it were easy to render a Reason. But as to our Ideas of Substances, we have very few or no abstract Names at all. For though the Schools have introduced Animalitas, Humanitas, Corporietas, and some others; yet they hold no Proportion with that infinite Number of Names of Substances, to which they never were ridiculous enough to attempt the coining of abiliract ones: and those few that the Schools forged, and put into the Mouths of their Scholars, could never yet get admittance into common Use, or obtain the License of publick Approbation. Which feems to me at least to intimate the Confession of all Mankind, that they have no Ideas of the real Effences of Substances, fince they have not Names for such Ideas: Which no doubt they would have had, had not their Consciousness to themselves of their Ignorance of them, kept them from fo idle an attempt. And therefore though they had Ideas enough to distinguish Gold from a Stone, and Metal from Wood; yet they but timorously ventured on such Terms, as Aurietas and Saxietas, Metallictas and Lignietas, or the like Names, which should pretend to fignify the real Effences of those Substances, whereof they knew they had no Ideas. And indeed, it was only the Doctrine of substantial Forms. and the Confidence of mistaken Pretenders to a Knowledge that they had not, which first coined, and then introduced Animalitas, and Humanitas, and the like; which yet went very little farther than their own Schools, and could never get to be current amongst Understanding Men. Indeed, Humanitas was a Word familiar amongst the Romans; but in a far different Sense, and stood not for the abstract Effence of any Substance; but was the abstract Name of a Mode, and its concrete Humanus, not Homo.

CHAP. IX.

Of the Imperfection of Words.

Words are used for recording and communicating our Thoughts.

6. 1. TROM what has been faid in the foregoing Chapters, it is eafy to perceive what Imperfection there is in Language, and how the very Nature of Words makes it almost unavoidable, for many of them to be doubtful and uncertain in their Significa-

tions. To examine the Perfection or Imperfection of Words, it is necessary first to consider their Use and End: For as they are more or less fitted to attain that, so are they more or less persect. We have, in the former part of this Discourse, often upon occasion, mentioned a double Use of Words.

First, One for the recording of our own Thoughts.

Secondly, The other for the communicating of our Thoughts to others.

nvill lerve for recording.

6. 2. As to the first of these, for the recording Low Words our oven Thoughts for the help of our own Memories, whereby as it were, we talk to our selves, any Words will ferve the turn. For fince Sounds are voluntary and indifferent Signs of any Ideas,

a Man may use what Words he pleases, to fignify his own Ideas to himfelf; and there will be no Imperfection in them, if he contrainty use the same Sign for the same Idea, for then he cannot fail or having his Meaning understood, wherein confilts the right Use and persection of Language.

6. 3. Secondar, as to Communication of Words,

Communicathat too kas a double Ule.

1. Civil.

tion by Words Civil er Fhi-Totolinical.

H. Philosophical.

First, By their Civil Use, I mean such a Communication of Thoughts and Ideas by Words, as may fire for the upholding common Conversation and Commerce about the ordinary Affairs and Conveniences of Civil Life, in the Societies of Men on amongst another.

Secondly, By the Philopophical Uje of Words, I mean fuch an afe of them as may fixe to convey the precife Notions of

Things,

Things, and to express, in general Propositions, certain and undoubted Truths, which the Mind may rest upon, and be satisfied with, in its search after true Knowledge. These two Uses are very distinct; and a great deal less exactness will serve in the one, than in the other, as we shall see in what follows.

• §. 4. The chief End of Language in Communication being to be understood, Words serve not well for that end, neither in Civil, nor Philosophical Discourse, when any Word does not excite in the Hearer the same *Idea* which it stands for in the Mind of the Speaker. Now since Sounds have no natural Connection with our *Ideas*, but

The Imterfection of Words is the doubtfalness of their Signification.

have all their Signification from the arbitrary Imposition of Men, the doubtfulness and uncertainty of their Signification, which is the Imperfection we here are tpeaking of, has its Cause more in the Ideas they stand for, than in any Incapacity there is in one Sound, more than in another, to signify any Idea: For in that regard they are all equilly perfect.

That then which makes Doubtfulness and Uncertainty in the Signification of some more than other Words, is the dif-

ference of *Ideas* they stand for.

6.5. Words having naturally no Signification, Carfes of their the Idea which each stands for, must be learned Imporposition, and retained by those who would exchange Thoughts, and hold intelligible Distource with others, in any Language, but this is harded to be done, where,

First, The Ideas they stand for are viry complex, and made

up of a great Number of Ideas put together.

Secondly, Where the Ideas they fland for have no certain Connection in Nature; and so no settled Standard any where in Nature existing, to rectify and adjust mem by.

Thirdly, Where the Signification of the Word is referred

to a Standard, which Standard is not easy to be known.

Fourthly, Where the Signification of the Word, and the real

Essence of the Thing, are not exactly the same.

These are Difficulties that attend the Sominication of several Words that are intelligible. These which are not intelligible at all, such as Names standing for any simple I eas, which another has not Organs or Faculties to attain; as the Names of Colours to a blind Man, or Sounds to a deal Man, need not here be mentioned.

In all these Cases we shall find an Impersection in Words, which I shall more at large explain, in their particular Appointment

Because the

Ideas they

fo complex.

fand for, are

plication to our feveral forts of Ideas: For if we examine them, we shall find that the Names of mixed Modes are most liable to Doubtfulness and Imperfection, for the two first of these Reasons; and the Names of Substances chiefly for the two latter.

(6.6. First, The Names of mixed Modes, are The Names of many of them liable to great Uncertainty and mixed Modes Obscurity in their Signification.

mixed Nodes Obscurity in their Signification.

I. Becarge of that great Composition these complex Ideas are often made up of. To make Words serviceable to the End of Communication, it is necessary (as has been said) that they excite, in the Hearer, exactly the same Idea they

fland for in the Mind of the Speaker. Without this, Men fill one another's Heads with Noise and Sounds; but convey not thereby their Thoughts, and lay not before one another their Ideas, which is the End of Discourse and Language. But when a Word slands for a very complex Idea, that is compounded and decompounded, it is not easy for Men to form and retain that Idea so exactly, as to make the Name in common Use sland for the same precise Idea, without any the least Variation. Hence it comes to pass, that Mens Names of very compound Ideas, such as for the most part are moral Words, have seldom, in two different Men, the same precise Signification, since one Man's complex Idea seldom agrees with anothers, and often differs from his own, from that which he had Yesterday, or will have to Morrow.

Secondly, Because they have no Standards. 6.7. II. Because the Names of mixed Modes, for the most part want Standards in Nature, whereby Men may rectify and adjust their Significations; therefore they are very various and doubtful. They are Assemblages of Ideas put together at the Pleasure of the Mind, pursuing

its own Ends of Discourse, and suited to its own Notions, whereby it designs not to copy any thing really existing, but to denominate and rank Things as they come to agree, with those Archetypes or Forms it has made. He that first brought the Word Sham, Wheedle, or Banter, in use, put together, as he thought sit those Ideas he made it stand for: And as it is with any new Names of Modes, that are now brought into any Language; so was it with the old ones, when they were first made use of. Names therefore that stand for Collections of Ideas, which the Mind makes at pleasure, must needs be of doubtful Signification, when such Collecti-

ons are no where to be found conflantly united in Nature, nor any Patterns to be shewn whereby Men may adjust them. What the word Murther, or Sacrilge, &c. fignifies, can never be known from things themselves: There be many of the parts of those complex Ideas, which are not visible in the Action it felf, the Intention of the Mind, or the Relation of holy Things, which make a part of Murther, or Sacrilege, have no necesfary Connection with the outward and visible Action of him that commits either: and the pulling the Trigger of the Gun, with which the Murther is committed, and is all the Action, that, perhaps, is visible, has no natural Connection with those other Ideas, that make up the complex one, named Murther. They have their Union and Combination only from the Understanding, which unites them under one Name: But uniting them without any Rule, or Pattern, it cannot be but that the Signification of the Name, that stands for such voluntary Collections, should be often various in the Minds of different Men. who have scarce any standing Rule to regulate themselves, and their Notions by, in fuch arbitrary Ideas.

6. 8. 'Tis true, common Use, that is the Rule of Propriety, may be supposed here to afford some aid, to settle the Signification of Language; and it cannot be denied, but that in

Profriety not a sufficient Remedy.

fome Measure it does. Common use regulates the meaning of Words pretty well for common Conversation; but no body having an Authority to establish the precise Signification of Words, nor determine to what Ideas any one shall annex them, common Use is not sufficient to adjust them to Philosophical Discourses; there being scarce any Name, of any very complex Idea (to fay nothing of others) which, in common Use, has not a great Latitude, and which keeping within the Bounds of Propriety, may not be made the Sign of far different Ideas. Befides, the Rule and Measure of Propriety itself being no where established, it is often matter of Dispute, whether this or that way of using a Word, be Propriety of Speech, or no. From all which, it is evident, that the Names of fuch kind of very complex Ideas, are naturally liable to this Imperfection, to be of doubtful and uncertain Signification; and even in Men, that have a Mind to understand one another, do not always stand for the same Idea in Speaker and Hearer. Tho' the Names Glory and Gratitude be the same in every Man's Mouth thro' a whole Country, yet the complex collective Idea, which every one thinks on, or intends by that Name, is apparently very different in Men using the same Language. 6. 9. The The way of learning these Names contributes also to their Doubtfulms.

6. 9. The way also wherein the Names of mixed Modes are ordinarily learned, does not a little contribute to the Doubtfulness of their Signification. For if we will observe how Children learn Languages, we shall find, that to make them understand what the Names of simple Ideas, or Substances, stand for, People ordinarily

show them the thing whereof they would have them have the Idea, and then repeat to them, the Name that stands for it, as Illite, Sweet, Milk, Sugar, Cat, Dog. But as for mixed Modes, especially the most material of them, moral Words, the Sounds are usually learned first, and then to know what complex Ideas they stand for, they are either beholden to the Explication of others, or (which happens for the most part) are left to their own Observation and Industry; which being little laid out in the fearch of the true and precise meaning of Names, these moral Words are, in most Mens Mouths, little more than bare Sounds; or when they have any, 'tis for the most part but a very loose and undetermined, and consequently obscure and confused Signification. And even those themselves, who have with more Attention fettled their Notions, do yet hardly avoid the Inconvenience, to have them stand for complex Ideas, different from those which other, even intelligent and studious Men, make them the Signs of. Where shall one find any, either controversial Debate, or familiar Discourse, concerning Honour, Faith, Grace, Religion, Church, &c. wherein it is not easy to observe the different Notions Men have of them; which is nothing but this, that they are not agreed in the Signification of Those Words; nor have in their Minds the same complex Ideas which they make them stand for: and so all the Contests that follow thereupon, are only about the meaning of a Sound. And hence we fee, that in the Interpretation of Laws, whether Divine, or Human, there is no end; Comments beget Comments, and Explications make new Matter for Explications: And of limiting, distinguishing, varying the Signification of these moral Words, there is no end. These Ideas of Mens making, are, by Men still having the same Power, multipled in infinitum. Many a Man, who was pretty well fatisty'd of the meaning of a Text of Scripture, or Clause in the Code, at first reading, has by consulting Commentators, quite lost the sense of it, and by those Elucidations, given rife or encrease to his Doubts, and drawn Obscurity upon the I fay not this, that I think Commentaries needless; but to shew how uncertain the Names of mixed Modes naturally rally are, even in the Mouths of those who had both the Intenfion and the Faculty of speaking as clearly as Language

was capable to express their Thoughts.

6. 10. What Obscurity this has unavoidably brought upon the Writings of Men, who have Hence unavoidable Oblived in remote Ages, and different Countries, it scurity in anwill be needless to take Notice; fince the numetient Authors. rous Volumes of learned Men, employing their Thoughts that way, are Proofs more than enough to shew what Attention, Study, Sagacity, and Reasoning are required, to find out the true meaning of Antient Authors. But there being no Writings we have any great concernment to be very follicitous about the meaning of, but those that contain either Truths we are required to believe, or Laws we are to obey, and draw Inconveniences on us when we mistake or transgress, we may be less anxious about the Sense of other Authors, who writing but their own Opinions, we are under no greater necessity to know them, than they to know ours. Our good or evil depending not on their Decrees, we may fafely be igno-

rant of their Notions: And therefore in the reading of them, if they do not use their Words with a due clearness and perspicuity, we may lay them aside, and without any injury dene

Si non vis intelligi, debes negligi.

them, refolve thus with ourfelves,

Vol. II.

C. 11. If the Signification of the Names of mixed Modes are uncertain, because there be no real Standards existing in Nature, to which those *Ideas* are referred, and by which they may be adjusted, the Names of Substances are of a doubtful Signification, for a contrary Reason, viz. because the Ideas they stand for are supposed conformable to the Reality of Things, and are referred to Standards made by Nature. In our Ideas of Substances we have not the Liberty as in mixed Modes, to frame what Combinations we think fit, to be the characteristical Notes, to rank and denominate Things by. In these we must follow Nature, fuit our complex Idea to real Existences, and regulate the Signification of their Names by the Things themfelves, if we will have our Names to be the Signs of them, and stand for them. Here, 'tis true, we have Patterns to follow; but Patterns that will make the Signification of their Names very uncertain: For Names must be of a very unsteady and various meaning, if the Ideas they frand for be referred to Standards without us, that either cannot be known at all, or can be known but imperfectly and uncertainty. 6, 12. The

Names of Substances referr'd, First, To real Essences that cannot le knozun.

6. 12. The Names of Substances have, as has been shewed, a double Reference in their ordinary Use:

Fir ft, Sometimes they are made to fland for. and so their Signification is supposed to agree to, The real Constitution of Things, from which all their Properties flow, and in which they all centre. But this real Constitution, or

(as it is apt to be call'd) Essence, being utterly unknown to us, any Sound that is put to stand for it, must be very uncertain in its Application; and it will be impossible to know, what Things are, or ought to be called an Horse, or Antimony, when those Words are put for real Essences, that we have no Ideas of at all. And therefore in this Supposition, the Names of Substances being referred to Standards that cannot be known, their Significations can never be adjusted and established by those Standards.

Secondly, To eo existing Qualities. which are knowen but imperfestly.

6. 13. Secondly, The simple Ideas that are found to co-exist in Substances, being that which their Names immediately fignify, these, as united in the feveral Sorts of Things, are the proper Standards to which their Names are referred, and by which their Significations may best be rectify'd. But neither will these

Archetypes fo well ferve to this purpose, as to leave these without very various and uncertain Significations. Because these simple Ideas that co-exist, and are united in the fame Subject, being very numerous, and having all an equal Right to go into the complex specifick Idea, which the specifick Name is to stand for, Men, though they propose to themselves the very same Subject to consider, yet frame very different Ideas about it; and fo the Name they use for it, unavoidably comes to have, in feveral Men, very different Significations. The fimple Qualities which make up the complex Ideas, being most of them Powers, in Relation to Changes, which they are apt to make in, or receive from other Bodies, are almost infinite. He that shall but observe, what a great Vareity of Alterations any one of the baser Metals is apt to receive, from the different Application only of Fire; and how much a greater Number of Changes any of them will receive in the Hands of a Chymist, by the Application of other Bodies, will not think it strange, that I count the Properties of any fort of Bodies not cafy to be collected, and completely known by the ways of enquiry, which our Faculties are capable of. They

They being therefore at least so many, that no man can know the precise and definite Number, they are differently discovered by different Men, according to their various Skill, Attention, and Ways of handling; who therefore cannot chuse but have different Ideas of the same Substance, and there'ore make the Signification of its common Name very various and uncertain. For the complex Ideas of Substances, being made up of fuch simple ones as are supposed to co-exist in Nature, every one has a right to put into his complex Idea, those Qualities he has found to be united together. For tho' in the Substance Gold, one fatisfies himself with Colour and Weight, yet another thinks Solubility in Aq. Regia, as necessary to be join'd with that Colour in his Idea of Gold, as any one does its Fusibility: Solubility in Aq. Regia, being a Quality as constantly join'd with its Colour and Weight, as Fusibility or any other sothers put in its Ductility or Fixedness, &c. as they have been taught by Tradition, or Experience. Who of all these has established the right Signification of the Word Gold? Or who shall be the Judge to determine? Each has his Standard in Nature, which he appeals to, and with Reason thinks he has the same right to put into his complex Idea, fignify'd by the Word Gold, those Qualities which upon Trial he has found united; as another, who has not fo well examined, has to leave 'em out; or a third, who has made other Trials, has to put in others. For the Union in Nature of these Qualities, being the true Ground of their Union in one complex Idea, who can fay, one of them has more Reason to be put in, or left out, than another? From whence it will always unavoidably follow, that the complex Ideas of Substances in Menusing the same Name for them, will be very various; and fo the Significations of those Names, very uncertain.

§. 14. Besides, there is scarce any particular thing existing, which in some of its simple *Ideas*, does not communicate with a greater, and in others with a less Number of particular Beings: Whoshall determine in this Case, which are those that are to make up the precise Collection, that is to be

Timaly, To cocuifiling Q atimes which cre harms but importation.

fignified by the specifick Name; or can with any just Authority prescribe, which obvious or common Qualities are to be left out; or which more secret, or more particular, are to be put into the Signification of the Name of any Substance? All which together, seldom or never fail to produce that various and doubtful Signification in the Names of Substances, which causes such Uncertainty, Disputes, or Mittakes, when wascome to a Philosophical Use of them.

1 2

With this Imperfection they may force for Civil, but not well for Philosphical U.C.

§. 15. 'Tis true, as to civil and common Conversation, the general Names of Substances, regulated in their ordinary Signification by some obvious Qualities, (as by the Shape and Figure in Things of known seminal Propagation, and in other Substances, for the most part by Colour, joined with some other sensible Qua-

lities) do well enough to defign the Things Men would be understood to speak of: And so they usually conceive well enough the Substances meant by the Word Gold, or Apple, to diffinguish the one from the other. But in Philosophical Enquiries and Debates, where general Truths are to be establithed, and Confequences drawn from Positions laid down, there the precise Signification of the Names of Substances will be found, not only not to be well establish'd, but also very hard to be fo. For Example, he that shall make Malleableness, or a certain Degree of Fixedness, a part of his complex Idea of Gold, may make Propositions concerning Gold, and draw Confequences from them, that will truly and clearly follow from Gold, taken in such a Signification: But yet fuch as another Man can never be forced to admit, nor be convinced of their Truth, who makes not Malleableness, or the same Degree of Fixedness, part of that complex Idea that the Name Gold, in his use of it, stands for.

§. 16. This is a natural, and almost unavoidable Inflance, Imperfection in almost all the Names of Substances, Liquor. in all Languages what foever, which Men will eafily find, when once passing from confused or loose Notions, they come to more thrich and close Enquiries. For then they will be convinced how doubtful and obscure those Words are in their Signification, which in ordinary use appeared very clear and I was once in a Meeting of very learned and determined. ingenious Physicians, where by chance there arose a Question, whether any Liquor passed thro' the Filaments of the Nerves. The Debate having been managed a good while, by Variety of Arguments on both fides, I (who had been used to suspect that the greatest part of Disputes were more about the Signification of Words, than a real Difference in the Conception of Things) defired, That before they went any farther on in this Dispute, they would first examine, and establish among them, what the Word Liquor fignify'd. They at first were a little furprized at the Propofal; and had they been Perfons less ingenious, they might perhaps have taken it for a very frivolous or extravagant one: Since there was no one there

that thought not himself to understand very perfectly, what the word Liquor stood for; which, I think too, none of the most perplexed Names of Substances. However, they were pleased to comply with my Motion, and upon Examination found, that the Signification of that Word was not so settled and certain, as they had all imagined; but that each of them made it a Sign of a different complex Idea. This made them perceive, that the main of their Dispute was about the Signification of that Term; and that they differed very little in their Opinions, concerning some fluid and substle Matter, passing thro' the Conduits of the Nerves; tho' it was not so easy to agree whether it was to be called Liquor, or no, a thing which when considered, they thought it not worth the contending about.

§. 17. How much this is the Case in the greatest part of Disputes, that Men are engag'd so hotly in, I shall, perhaps, have an Occasion in another place to take Notice. Let us only here confider a little more exactly the fore-mentioned Instance of the Word Gold, and we shall see how hard it is precisely to determine its Signification. I think all agree, to make it stand for a Body of a certain yellow shining Colour; which being the Idea to which Children have annexed that Name, the shining yellow part of a Peacock's Tail is properly to them Gold. Others finding Fusibility joined with that yellow Colour in certain parcels of Matter, make of that Combination a complex Idea to which they give the Name Gold, to denote a fort of Substances; and fo exclude from being Gold all fuch vellow shining Bodies, as by Fire will be reduced to Athes, and admit to be of that Stecies, or to be comprehended under that Name Gold, only fuch Substances as having that shining yellow Colour will by Fire be reduced to Fusion, and not to Ashes. Another by the fame Reason adds the Weight, which being a Quality, as striit'y joined with that Colour, as its Fusibility, he thinks has the same Reason to be joined in its I dea, and to be signify'd by its Name: And therefore the other made up of Body, of luch a Colour and Fufibility, to be imperfect; and fo on of all the rest: Wherein no one can shew a Rea'on, why some of the infeparable Qualities, that are always united in Nature, should be put into the nominal Effence, and others left out : Or why the Word Gold, fignifying that fort of Body the Ring on his Finger is made of, should determine that fort, rather by its Colour, Weight, and Fufibility; than by its Colour, Weight, and Solubility in Aq. Regia: Since the didolving it by that Liquor, is as inseparable from it, as the Pution by Fire; and

they are both of them nothing, but the Relation which that Substance has to two other Bodies, which have a Power to operate differently upon it. For by what right is it, that Fufibility comes to be a part of the Essence signify'd by the Word Gold, and Solubility but a Property of it? Or why is its Colour part of the Essence, and its Malleableness but a Property? That which I mean, is this, That thefe being all but Properties, depending on its real Constitution; and nothing but Power, either active or passive, in Reference to other Bodies, no one has Authority to determine the Signification of the Word Gold, (as referred to fuch a Body existing in Nature) more to one Collection of Ideas to be found in that Body, than to another: Whereby the Signification of that Name must unavoidably be very uncertain. Since, as has been said, several People observe several Properties in the same Substance; and I think, I may say no body all. And therefore have but very imperfect Descriptions of Things, and Words have very uncertain Significations.

The Names of fimple Ideas the least doubt-

§. 18. From what has been faid, it is easy to observe, what has been before remarked, viz. That the Names of Simple Ideas are, of all others, the least liable to Mistakes, and that for these Reasons. First, because the Ideas they

fland for, being each but one fingle Perception, are much eafier gor, and more clearly retained, than the more complex ones, and therefore are not liable to the uncertainty which usually attends those compounded ones of Substances and mixed Modes, in which the precise Number of simple Ideas that make them up, are not easily agreed, and so readily kept in the Mind. And, Secondly, Because they are never referred to any other Effence, but basely that Preception they immediately fignify: Which Reference is that which renders the Signification of the Names of Substances naturally so perplexed, and gives occasion to fo many Disputes. Men that do not pervertly use their Words, or on purpose set themselves to cavil, feldom mistake in any Language which they are acquainted with, the Use and Signification of the Names of simple Ideas: Write and Sweet, Tellow and Bitter, carry a very obvious meaning with them, which every one precifely comprehends, or eafily perceives he is Ignorant of, and feeks to be informed. But wh t precise Collection of simple Ideas, Modefty, or Frugality, stand for in another's Use, is not so certainly known. And however we are apt to think, we well enough know, what is meant by Gold or Iron; yet the precise complex

complex Idea, others make them the Signs of, is not fo certain: And I believe it is very feldom that in Speaker and Hearer, they stand for exactly the same Collection. Which must needs produce Mistakes and Disputes, when they are made use of in Discourses, wherein Men have to do with universal Propositions, and would settle in their Minds universal Truths, and consider the Consequences that follow from them.

6.19. By the same Rule, the Names of simple Modes are next to these of simple Ideas, least liable to Doubt and Uncertainty, especially those of Figure and Number, of which

And next to them simple Modes.

Men have so clear and distinct Ideas. Whoever, that had a Mind to understand them, missook the ordinary meaning of Seven, or a Triangle: And in general the least compounded Ideas in every kind have the least dubious Names.

§.20. Mixed Modes therefore, that are made up but of a few and obvious fimple *Ideas*, have usually Names of no very uncertain Signification. But the Names of mixed Modes, which comprehend a great Number of fimple *Ideas*, are commonly of a very doubtful and undeter-

mined meaning, as has been shewn.

The most doubtful are the Names of way compunded mixed Modes and Substances.

Names of Substances, being annexed to *Ideas*, that are neither the real Essences, nor exact Representations of the Patterns they are referr'd to, are liable yet to greater Imperfection and Uncertainty, especially when we come to a Philosophical use of them.

Names of Substances, proceeding for the most part from our want of Knowledge, and Inability to penetrate into their real Constitutions, it may probably be wondered, Why I charge this as an

Why this Imperfection charged upon Words.

Imperfection, rather upon our Words than Understandings. This Exception has so much appearance of Justice, that I think my self obliged to give a Reason, why I have followed this Method. I must contess then, that when I first began this Discourse of the Understanding, and a good while after, I had not the least Thought that any Consideration of Words was at all necessary to it. But when having passed over the Original and Composition of our Iteas, I began to examine the Extent and Certainty of our Knowledge, I found it had so near a Connection with Words, that unless their Force and Manner of Signification were first well observed, there could be very little said clearly and pertinently concerning Knowledge:

ledge: which being converfant about Truth, had constantly to do with Propositions. And tho' it terminated in Things, yet it was for the most part so much by the Intervention of Words, that they feemed fcarce feparable from our general Knowledge. At least they interpose themselves so much between our Understandings, and the Truth, which it would concemplate and apprehend, that like the Medium through which visible Objects pass, their Obscurity and Disorder does not feldom cast a mist before our Eyes, and impose upon our Understandings. If we consider, in the Fallacies Men put upon themselves, as well as others, and the Mistakes in Mens Disputes and Notions, how great a part is owing to Words, and their uncertain or mittaken Significations, we shall have Reason to think this no small obstacle in the Way of Knowledge, which, I conclude, we are the more carefully to be warned of, because it has been so far from being taken Notice of as an Inconvenience, that the Arts of improving it have been made the Business of Mens Study; and obtained the Reputation of Learning and Subtlety, as we shall see in the following Chapter. But I am apt to imagine, that were the Imperfections of Language, as the Instrument of Knowledge, more thoroughly weighed, a great many of the Controversies that make fuch a Noise in the World, would of themselves cease; and the way to Knowledge, and, perhaps, Peace too, lie a great deal open r than it does.

This should teach us Moderation, in imp-fing our coun Nense of old Aut'ors. §. 22. Sure I am, that the Signification of Words, in all Languages, depending very much on the Thoughts, Notions, and *Ideas* of him that uses them, must unavoidably be of great uncertainty to Men of the same Language and Country. This is so evident in the *Greck* Authors, that he that shall peruse their Writings, will find in

almost every one of them a distinct Language, tho' the same Words. But when to this natural Difficulty in every Country, there shall be added different Countries, and remote Ages, wherein the Speakers and Writers had very different Notions, Tempers, Customs, Ornaments, and Figures of Speech, &c. every one of which influenced the Signification of their Words then, though to us now they are lost and unknown, it would become us to be charitable one to another in our Interpretations or Missunderslanding of those antient Writings, which, though of great Concernment to be understood, are liable to the unavoidable Difficulties of Speech, which, (if we except the Names of simple Ideas, and some very obvious Things) is not capable

capable without a constant defining the Terms, of conveying the Sense and Intention of the Speaker, without any manner of doubt and uncertainty to the Hearer. And in Discourses of Religion, Law, and Morality, as they are Matters of the highest Concernment, so there will be the greatest Difficulty.

9. 23. The Volumes of Interpreters, and Commentators on the Old and New Testament, are but too manifest Proofs of this. Tho' every thing faid in the Text be infallibly true, yet the Reader may be, nay, cannot chuse but be very fallible in the understanding of it. Nor is it to be wonder'd, that the Will of GOD, when clothed in Words, should be liable to that doubt and uncertainty, which unavoidably attends that fort of Conveyance; when even his Son, whilst clothed in Flesh, was subject to all the Frailties and Inconveniences of human Nature, Sin excepted. And we ought to magnify his Goodness, that he hath spread before all the World, such legible Characters of his Works and Providence, and given all Mankind fo fufficient a light of Reason, that they, to whom this written Word never came, could not (whenever they fer themselves to search) either doubt of the Being of a GOD, or of the Obedience due to him. Since then the Precepts of natural Religion are plain, and very intelligible to all Mankind, and feldom come to be controverted; and other revealed Truths, which are conveyed to us by Books and Languages, are liable to the common and natural Obscurities and Difficulties incident to Words, methinks it would become us to be more careful and diligent in observing the former, and lefs magisterial, positive, and imperious, in imposing our own Sense and Interpretations of the latter.

CHAP. X.

Of the Abuse of Words.

Is in Language, and the Obscurity and Confusion that is so hard to be avoided in the Use of Words, there are several wilful Faults and Neglects which Men are guilty of, in this way of Communication, whereby they render these Signs less clear and distinct

in their Signification, than naturally they need to be.

First, Words without any, or without clear Ideas.

§. 2. First, In this kind, the first and most palpable abuse is, the using of Words, without clear and distinct Ideas; or, which is worse, Signs without any thing signify'd. Of these there are two Sorts:

I. One may observe, in all Languages, certain Words, thar, if they be examined, will be found, in their first Original, and their appropriated Use, not to stand for any clear and These, for the most part, the several Scets of distinct Ideas. Philosophy and Religion have introduced. For their Authors, or Promoters, either affecting fomething fingular, and out of the way of common Apprehensions, or to support some strange Opinions, or cover some Weakness of their Hypochesis, seldom fail to Coin new Words, and fuch as, when they come to be examined, may juffly be call'd insignificant Terms. For having either had no determinate Collection of Ideas annexed to them, when they were first invented; or at least such as, if well examined, will be found inconfistent, 'tis no wonder if afterwards, in the vulgar use of the same Party, they remain empty Sounds, with little or no Signification, amongst those who think it enough to have them often in their Mouths, as the distinguifhing Characters of their Church, or School, without much troubling their Heads to examine what are the precise Ideas they stand for. I shall not need here to heap up Instances, every one's Reading and Conversation will sufficiently furnish him: Or if he wants to be better flored, the great Mint-Masters of these kind of Terms, I mean the School-Men and Metaphyficians, (under which, I think, the diffuting Natural and Moral Philosophers of these latter Ages may be comprehended,) have where-withal abundantly to content him.

6. 3. 11. Others there be, who extend this abuse yet farther, who take so little care to lay by Words, which in their primary Notation have scarce any clear and distinct Ideas which they are annexed to, that by an unpardonable Negligence, they samiliarly use Words, which the Propriety of Language has affixed to very important Ideas. without any distinct Meaning at all. Wisson, Glory, Grace, &c. are Words frequent enough in every Man's Mouth; but if a great many of those who use them, should be asked what they mean by them, they would be at a stand, and not know what to answer: A plain Proof, that though they have learned those Sounds, and have them ready at their Tongue's end, yet there are no determined Ideas laid up in their Minds, which are to be

expressed to others by them.

6.4. Men having been accustomed from their Cradles to learn Words, which are easily got and retained, before they knew, or had framed the complex Ideas, to which they were annexed, or which were to be found in the Things they were thought to stand for, they usually continue to do so

Occasioned by harning Names before the Ideas they belong to.

all their Lives, and without taking the Pains necessary to fettle in their Minds determined Ideas, they use their Words for such unsteady and confused Notions as they have, contenting themfelves with the same Words other People use; as if their very Sound necessarily carried with it constantly the same Meaning. This, though Men make a shift with in the ordinary Occurrences of Life, where they find it necessary to be understood, and therefore they make Signs till they are fo: Yet this Infignificancy in their Words, when they come to reason concerning either their Tenets or Interest, manifestly fills their Discourse with abundance of empty unintelligible Noise and Targon, especially in Moral Matters, where the Words, for the most part, standing for arbitrary and numerous Collections of Ideas, not regularly and permanently united in Nature, their bare Sounds are often only thought on, or at least very obscure and uncertain Notions annexed to them. Men take the Words they find in use amongst their Neighbours; and that they may not feem ignorant what they stand for, use them confidently, without much troubling their Heads about a certain fixed Meaning; whereby, besides the ease of it, they obtain this Advantage, That as in such Discourses they seldom are in the Right, so they are as seldom to be convinced that they are in the Wrong; it being all one to go about to draw those Men out of their Mistakes, who have no fettled Notions, as to dispesses a Vagrant of his Habitation, who has no settled abode. This I guess to be so; and every one may observe in himself and others, whether it be or no.

§. 5. Secondly, Another great Abuse of Words is, Inconstancy in the use of them. It is hard to find a Discourse written of any Subject, especially of Controversy, wherein one shall not observe, if he read with Attention, the same Words

Secondly, Unflead Application of them.

(and those commonly the most material in the Discourse, and upon which the Argument turns) used sometimes for one Collection of simple *Ideas*, and sometimes for another, which is a persect Abuse of Language. Words being intended for Signs of my *Ideas*, to make them known to others, not by any natural Signification, but by a voluntary Imposition, 'tis plain

cheat and abuse, when I make them stand sometimes for one thing, and fometimes for another; the wilful doing whereof can be imputed to nothing but great Folly, or greater Dishonesty. And a Man, in his Accompts with another, may, with as much fairness, make the Characters of Numbers stand sometimes for one, and fometimes for another Collection of Units, (v.g. this Character 3 stand sometimes for three, sometimes for four, and fometimes for eight) as in his Discourse, Reasoning, make the same Words stand for different Collections of fimple Ideas. If Men should do so in their Reckenings, I wonder who would have to do with them? One who would fpeak thus in the Affairs and Bufiness of the World, and call 8 fometimes feven, and fometimes nine, as best served his Advantage, would prefently have clap'd upon him one of the two Names Men constantly are disgusted with. And yet in Arguings, and learned Contests, the same fort of proceeding pasies commonly for Wit and Learning; but to me it appears a greater Diffionesty than the misplacing of Counters, in the casting up a Debt; and the Cheat the greater, by how much Truth is of greater Concernment and Value than Money.

Thirdly, Affeel dObf urity by swrong Affication. 6. 6. Thirdly, Another abuse of Language is, an affected Obscurity, by either applying old Words to new and unusual Significations, or introducing new and ambiguous Terms, without defining either; or else putting them so together, as may

confound their ordinary meaning. Tho' the Peripatetick Philosophy has been most eminent in this way, yet other Sects have not been wholly clear of it. There is scarce any of them that are not cumber'd with fome Difficulties, (fuch is the Imperfection of Human Knowledge) which they have been fain to cover with Obscurity of Terms, and to consound the Signification of Words, which, like a Mist before Peoples Eyes, might hinder their weak parts from being discovered. That Body and Extension in common use stand for two distinct Ideas, is plain to any one that will but reflect a little. For were their Signification precifely the same, it would be proper and as intelligible to fay, the Body of an Extension, as the Extenfron of a Body; and yet there are those who find it necessary ro confound their Signification. To this Abuse, and the Mischiefs of confounding the Signification of Words, Logick and the liberal Sciences, as they have been handled in the Schools, have given Reputation; and the admired Art of Disputing hith added much to the natural Imperfection of Languages, whillt it has been made use of and fitted to perplex the Signification

fication of Words, more than to discover the Knowledge and Truth of Things: And he that will look into that fort of learned Writings, will find the Words there much more obscure, uncertain, and undetermined in their Meaning, than

they are in ordinary Conversation.

§. 7. This is unavoidably to be so, where Mens Parts and Learning are estimated by their Skill in Disputing. And if Reputation and Reward shall attend these Conquests, which depend mostly on the Fineness and Niceties of Words, 'tis no Won-

Logick and Dispute has much contributed to this.

der if the Wit of Men so employ'd, should perplex, involve and fubtilize the Signification of Sounds, fo as never to want fomething to fay, in opposing or defending any Question; the Victory being adjudged not to him who had Truth on his fide, but the last Word in the Dispute.

§. 8. This, tho' a very useless Skill, and that

Calling it Subtlety.

which I think the direct opposite to the ways of Knowledge, hath yet paffed hitherto under the laudable and effeemed Names of Subtlety and Acuteness; and has had the applause of the Schools, and Encouragement of ore part of the learned Men of the World. And no wonder, fince the Philosophers of old, (the disputing and wrangling Philosophers, I mean, fuch as Lucian wittily and with Reason taxes) and the Schoolmen fince, aiming at Glory and Esteem, for their great and universal Knowledge, easier a great deal to be pretended to, than really acquired, found this a good Expedient to cover their Ignorance, with a curious and unexplicable Web of perplexed Words, and procure to themselves the Admiration of others, by unintelligible Terms, the apter to produce Wonder, because they could not be understood: whilst it appears in all History, that these prosound Doctors were no wiser. nor more useful than their Neighbours; and brought but small Advantage to human Life, or the Societies wherein they lived: Unless the coining of new Words, where they produced no new Things to apply them to, or the perplexing or obfcuring the Signification of old ones, and fo bringing all things into question and dispute, were a thing profitable to the Life of Man, or worthy Commendation and Reward.

§. 9. For notwithstanding these learned Disputants, these all-knowing Doctors, it was to the unscholastick Statesman, that the Governments of the World owed their Peace, Defence, and

This Learning wery little benefits Society.

Liberties; and from the illiterate and contemned Mechanick, (a Name of Difgrace) that they received the Improvements of useful Arts. Nevertheless, this artificial Ignorance, and learned Gibberish, prevailed mightily in these last Ages, by the Interest and Artifice of those, who found no easier way to that pitch of Authority and Dominion they have attained, than by amufing the Men of Business, and Ignorant, with hard Words, or imploying the Ingenious and Idle in intricate Disputes, about unintelligible Terms, and holding them perpetually entangled in that endless Labyrinth. Besides, there is no fuch way to gain Admittance, or give Defence to strange and absurd Dostrines, as to guard them round about with Legions of obscure, doubtful and undefined Words: which vet make these Retreats more like the Dens of Robbers, or Holes of Foxes, than the Fortreffes of fair Warriours; which if it be hard to get them out of, it is not for the Strength that is in them, but the Briars and Thorns, and the Obscurity of the Thickets they are befet with. For Untruth being unacceptable to the Mind of Man, there is no other Defence left for Absurdity, but Obscurity.

But destroys
the Instruments of
Knowledge
and Communication.

6. 10. Thus learned Ignorance, and this Art of keeping, even inquisitive Men, from true Knowledge, hath been propagated in the World, and hath much perplexed, whilst it pretended to inform the Understanding. For we see, that other well-meaning and wife Men, whose Education and Parts had not acquired that acuteness,

could intelligibly express themselves to one another; and in its plain use, make a benefit of Language. But the unlearned Men well enough understand the Words White and Black, &c. and had constant Notions of the Ideas signify'd by those Words; yet there were Philosophers found, who had learning and f. btlety enough to prove, that Snow was black, i. e. to prove, that White was Black; whereby they had the Advantage to destroy the Instruments and Means of Discourse, Conversation, Instruction, and Society; whilst with great Art and Subtlety they did no more but perplex and contound the Signification of Words, and thereby render Language less useful, than the real Desects of it had made it; a Gift which the illiterate had not attained to.

As useful as to confound the Sound of the Letters, 6.11. These learned Men did equally instruct Mens Understandings, and profit their Lives, as he who should alter the Signification of known Characters, and by a subtle Device of Learning, far surpassing the Capacity of the Illiterate, Dull, and Vulgar, should, in his Writing, shew,

thai

that he could put A for B, and D for E, Ec. to the no small Admiration and Benefit of his Reader. It being as sensities to put Black, which is a Word agreed on to stand for one sensible Idea, to put it, I say, for another, or the contrary Idea, i. c. to call Snow Black, as to put this mark A, which is a Character agreed on to stand for one Modification of Sound, made by a certain Motion of the Organs of Speech, for B, which is agreed on to stand for another Modification of Sound, made by another certain Motion of the Organs of Speech.

§.12. Nor hath this Mischief stopp'd in logical Niceties, or curious empty Speculations; it hath invaded the great Concernments of human Life and Society; obscured and perplexed the material Truths of Law and Divinity; brought

This Art has perplexed Religion and Justice.

Confusion, Disorder and Uncertainty into the Assairs of Mankind; and if not destroy'd, yet in great Measure render'd useless, those two great Rules, Religion and Justice. What have the greatest part of the Comments and Disputes upon the Laws of GOD and Man ferved for, but to make the meaning more doubtful, and perplex the Sense? What have been the Effect of those multiplied curious Distinctions, and acute Niceties, but Obscurity and Uncertainty, leaving the Words more unintelligible, and the Reader more at a loss? How else comes it to pass, that Princes, speaking or writing to their Servants, in their ordinary Commands, are easily understood; speaking to their People, in their Laws, are not so? And as I remarked before, doth it not often happen, that a Man of an ordinary Capacity, very well understands a Text, or a Law, that he reads, till he confults an Expositor, or goes to Council; who by that time he hath done explaining them, makes the Words fignify either nothing at all, or what he pleafes.

6. 13. Whether any By Interests of these Pro-And ought fessions have occasion'd this, I will not here exanot to pels for Learning. mine; but I leave it to be confidered, whether it would not be well for Mankind, whose concernment it is to knowThings as they are, and to do what they ought, and not to spend their Lives in talking about them, or toffing Words to and fro; whether it would not be well, I fav, that the Ute of Words were made plain and direct; and that Language, which was given us for the Improvement of Knowledge, and Bond of Society, should not be employ'd to darken I ruth and unfertlePeoplesRights; to raiseMiss, and render unintentiable both Morality and Radigion? Or that at least, it this will hap, en, it should not be thought Learning or Knowledge to do fo?

Fourthly, taking them for Things. This, tho' it in fome degree concerns all Names in general, yet more particularly affects those of Substances.

To this Abuse those Men are most subject, who confine their Thoughts to any one System, and give themselves up into a firm belief of the Perfection of any received Hypothesis; whereby they come to be perfuaded, that the Terms of that Sect, are so suited to the Nature of Things, that they perfectly correspond with their real Existence. Who is there, that has been bred up in the Peripatetick Philosophy, who does not think the ten Names, under which are ranked the ten Predicaments, to be exactly conformable to the Nature of Things? Who is there of that School, that is not perfuaded, that substantial Forms, regetative Souls, abkorrence of a Vacuum, intentional Species, &c. are something real? These Words Men have learned from their very entrance upon Knowledge, and have found their Masters and Systems lay great Stress upon them; and therefore they cannot quit the Opinion that they are conformable to Nature, and are the Representations of fomething that really exists. The Platonists have their Soul of the World, and the Epicureans their endeavour towards Motion in their Atoms, when at rest. There is scarce any Sect in Philosophy has not a distinct fet of Terms that others understand not. But yet this Gibberish, which in the Weakness of Human Understanding, serves so well to palliate Mens Ignorance, and cover their Errors, comes by familiar use amongst those of the same Tribe, to seem the most important part of Language, and of all other the Terms the most fignisicant: And should Acrial and Atherial Vehicles come once, by the prevalency of that Doctrine, to be generally received any where, no doubt those Terms would make Impressions on Mens Minds, fo as to establish them in the Persuasion of the Reality of fuch Things, as much as Peripatetick Forms and intentional Species have heretofore done.

Inflance in Matter.

15. How much Names taken for Things are apt to mifted the Understanding, the attentive reading of Philosophical Writers would abundantly discover; as d that, perhaps, in Words little suspected of any such Misuse. I shall instance in one only, and that a very samiliar one. How many intricate Disputes have there been about Matter, as if there were some such thing really in Nature, distinct from Body; as 'tis evident, the Word Matter stands for an Idea distinct from the Idea of Endy? For if the Ideas these

two Terms flood for were precifely the same, they might indifferently in all Places be put one for another. But we fee, that tho' it be proper to fay, There is one Matter of all Bodies. one cannot fay, There is one Body of all Matters: We familiarly fay, one Body is bigger than another; but it founds harsh (and I think is never used) to say one Matter is bigger than another. Whence comes this then? viz. from hence, that tho' Matter and Body be not really distinct, but wherever there is the one, there is the other; yet Matter and Body stand for two different Conceptions, whereof the one is incomplete, and but a part of the other. For Body stands for a solid extended figured Substance, whereof Matter is but a partial and more confused Conception, it seeming to me to be used for the Substance and Solidity of Body, without taking in its Extension and, Figure: And therefore it is that speaking of Matter, we speak of it always as one, because in truth, it expresly contains nothing but the Idea of a folid Substance, which is every where the fame, every where un form. This being our Idea of Matter, we no more conceive, or speak of different Matters in the World, than we do of different Solidities; tho' we both conceive, and fpeak of different Bodies, because Extension and Figure are capable of Variation. But fince Solidity cannot exist without Extension and Figure, the taking Matter to be the Name of fomething really existing under that Precision, has no doubt produced those obscure and unintelligible Discourses and Disputes, which have filled the Heads and Books of Philosophers concerning Materia prima; which Imperfection or Abuse, how far it may concern a great many other general Terms, I leave to be confider'd. This, I think, I may at least fay, that we should have a great many fewer Disputes in the World, if Words were taken for what they are, the Signs of our Ideas only, and not for Things themselves. For when we argue about Matter, or any the like Term, we truly argue only about the Idea we express by that Sound, whether that precise Idea agree to any thing really existing in Nature, or no. And if Men would tell, what Ideas they make their Words stand for, there could not be half that Obscurity or Wrangling, in the fearch or support of Truth, that there is.

© 16. But whatever Inconvenience follows from this mistake of Words, this I am sure, that by constant and samiliar use, they charm Men into Notions far remote from the Truth of Things. 'Twould be a hard Matter to persuade any one that the Words which his Father or School-master, the Parson of the Parish, or such a Vol. II.

Reverend Doctor used, signify'd nothing that really existed in Nature: Which, perhaps, is none of the least Causes, that Men are so hardly drawn to quit their Mistakes, even in Opinions purely Philosophical, and where they have no other Interest but Truth. For the Words, they have a long time been used to, remaining sirm in their Minds, 'tis no wonder, that the wrong Notions annexed to them should not be removed.

Fifthly, fetting them for what they cannot fignify. 6. 17. Fifthly, Another Abuse of Words, is the setting them in the place of Things, which they do or can by no means signify. We may observe that in the general Names of Substances, whereof the nominal Fssences are only known

to us, when we put them into Propositions, and affirm or deny any thing about them, we do most commonly tacitly suppose, or intend they should stand for the real Essence of a certain fort of Substances. For when a Man fays Gold is Malleable, he means and would infinuate fomething more than this, that what I call Gold is Malleable, (though truly it amounts to no more) but would have this understood, viz. that Gold, i. e. what has the real Essence of Gold, is Malleable; which amounts to thus much, that Malleableness depends on, and is inseparable from the real Essence of Gold. But a Man not knowing wherein that real Effence confists, the Connection in his Mind of Malleableness is not truly with an Essence he knows not, but only with the Sound Gold he puts for it. Thus when we fay, that Animal Rationale is, and Animal implume bipes latis unguibus, is not a good Definition of a Man; 'tis plain, we suppose the Name Man in this case to stand for the real Essence of a Species, and would fignify, that a rational Animal better described that real Essence than a two leg'd Animal with broad Nails, and without Feathers. For elfe, why might not Plato as properly make the Word Ledpont or Man, stand for his complex Idea, made up of the Ideas of a Body, distinguished from others by a certain Shape, and other outward Appearances, as Aristotle make the complex Idea, to which he gave the Namea"ν βρωπ @ or Man, of Body, and the Faculty of Reasoning joined together; unless the Name arθρωπ 3or Man, were supposed to stand for something else, than what it fignifies; and to be put in the place of some other thing than the Idea a Man professes he would express by it?

V.g. Putting them for the real Essences of Substances. 6. 18. 'Tis true, the Names of Substances would be much more useful, and Propositions made in them much more certain, were the real Essences of Substances the *Ideas* in our Minds,

which

which those Words fignified. And 'tis for want of those real Effences, that our Words convey so little Knowledge or Certainty in our Discourses about them: And therefore the Mind, to remove that Impersection as much as it can, makes them, by a secret Supposition, to stand for a Thing having that real Essence, as if thereby it made some nearer approaches to it. For tho' the Word Man or Gold, signify nothing truly but a complex Idea of Properties, united together in one fort of Substances: Yet there is scarce any Body in the use of these Words, but often supposes each of those Names to stand for a thing having the real Essence, on which those Properties depend. Which is so far from diminishing the Impersection of our Words, that by a plain Abuse it adds to it, when we would make them stand for something, which not being in our complex Idea, the Name we use can no ways be the sign of.

§.19. This shews us the Reason why in mixed Modes any of the Ideas that make the Composition of the complex one, being left out or changed, it is allowed to be another thing, i.e. to be of another Species, as is plain in Chance medley, Man-slaughter, Murder, Parricide, &c. The Reason whereof is, because the complex Idea signified by that Name, is the real, as well as nominal Essence; and there is no secret Reference

Hence we think every change of our Idea in Sub-flances, not to change the Species.

minal Essence; and there is no secret Reference of that Name to any other Essence but that. But in Substances it is not so. For tho' in that called Gold, one puts into his complex Idea what another leaves out, and vice versa; yet Men do not usually think that therefore the Species is changed: Because they secretly in their Minds refer that Name, and suppose it annexed to a real immutable Effence of a thing existing, on which those Properties depend. He that adds to his complex Idea of Gold, that of Fixedness or Solubility in Ag. Regia, which he put not in it before, is not thought to have changed the Species; but only to have a more perfect Idea, by adding another fimple Idea, which is always in tack joined with those other, of which his former complex Idea confisted. But this reference of the Name to a thing, whereof we have not the Idea, is fo far from helping at all, that it only serves the more to involve us in Difficulties. For by this tacit reference to the real Effence of that Species of Bodies, the Word Gold (which by standing for a more or less perfect Collection of simple Ideas, serves to defign that fort of Body well enough in civil Discourse) comes to have no Signification at all, being put for somewhat, whereof we have no Idea at all, and fo can fignify nothing at H 2

all, when the Body it felf is away. For however it may be thought all one; yet, if well confidered, it will be found a quite different thing, to argue about Gold in Name, and about a parcel of the Body it felf, v. g. a piece of Leaf Gold laid before us; though in Difcourfe we are fain to substitute the Name for the Thing.

The Caufe of the Abuse, a Supposition of Nature's working always regularly. 6. 20. That which I think very much disposes Men to substitute their Names for the real Essences of Species, is the Supposition before mentioned, that Nature works regularly in the Production of Things, and sets the Boundaries to each of those Species, by giving exactly the same real internal Constitution to each individual, which we rank under one general Name.

Whereas any one who observes their different Qualities can hardly doubt, that many of the Individuals, called by the fame Name, are, in their internal Conflitution, as different one from another, as feveral of those which are ranked under different specifick Names. This Supposition however that the same precise internal Constitution goes always with the same specifick Name, makes Men forward to take those Names for the Representatives of those real Essences, though indeed they fignify nothing but the complex Ideas they have in their Minds when they use them. So that, if I may so say, fignifying one thing, and being supposed for, or put in the place of another, they cannot but, in such a kind of use, cause a great deal of Uncertainty in Mens Discourses; especially in those who have thoroughly imbibed the Doctrine of substantial Forms, whereby they firmly imagine the feveral Species of Things to be determined and diffinguished.

This Abuse contains two false Supposetions. 6. 21. But however preposterous and absurd it be, to make our Names stand for *Ideas* we have not, or (which is all one) Essences that we know not, it being in effect to make our Words the Signs of nothing; yet 'tis evident to any one, who

ever so little respects on the use Men make of their Words, that there is nothing more familiar. When a Man asks whether this or that thing he sees, let it be a Drill, or a monstrous Factus, be a Man, or no; 'tis evident, the Question is not, Whether that particular thing agree to his complex Idea, expressed by the Name Man: But whether it has in it the real Estence of a Species of Things, which he supposes his Name Man to stand for. In which way of using the Names of Substances, there are these sales Suppositions contained:

Firft,

First, That there are certain precise Essences, according to which Nature makes all particular Things, and by which they are distinguished into Species. That every thing has a real Constitution, whereby it is what it is, and on which its fenfible Qualities depend, is past Doubt: But I think it has been proved, that this makes not the Distinction of Species, as we rank them; nor the Boundaries of their Names.

Secondly, This tacitly also infinuates, as if we had Ideas of these proposed Essences. For to what purpose else is it, to enquire whether this or that Thing have the real Essence of the Species Man, if we did not suppose that there were such a specifick Essence known? Which yet is utterly false: And therefore such Application of Names, as would make them stand for Ideas which we have not, must needs cause great Disorder in Discourses and Reasonings about them, and be a great Inconvenience in our Communication by Words.

§. 22. Sixthly, There remains yet another more general, tho' perhaps less observed, Abuse of Words; and that is, that Men having by a long and familiar use annexed to them certain Ideas, they are apt to imagine so near and necessary a Connexion between the Names and the Signification they use 'em in, that they

Sixthly, A Supposition that Words have a certain and evident Significa-

forwardly suppose one cannot but understand what their Meaning is; and therefore one ought to acquiesce in the Words delivered, as if it were past doubt, that in the use of those common received Sounds, the Speaker and Hearer had neceffarily the same precise Ideas. Whence presuming, that when they have in Discourse used any Term, they have thereby, as it were, fet before others the very thing they talk of. And so likewise taking the Words of others, as naturally standing for just what they themselves have been accustomed to apply them to, they never trouble themselves to explain their own, or understand clearly others Meaning. From whence commonly proceeds Noise and Wrangling, without Improvement or Information; whilft Men take Words to be the constant regular Marks of agreed Notions, which in truth are no more but the voluntary and unsteady Signs of their own Ideas. And yet Men think it strange, if in Discourse, or (where it is often absolutely necessary) in Dispute, one sometimes asks the meaning of their Terms: Though the Arguings one may every. Day observe in Conversation, make it evident, that there are few Names of complex Ideas, which any two Men use for the same just precise Collection. 'Tis hard to name a Word which

 H_3

which will not be a clear Instance of this. Life is a Term none more familiar. Any one almost would take it for an Affront, to be asked what he meant by it. And yet if it comes in Question, whether a Plant, that lies ready formed in the Seed, have Life; whether the Embrio in an Egg before Incubation, or a Man in a Swound without Sense or Motion, be alive, or no? It is easy to perceive, that a clear distinct fettled Idea does not always accompany the Use of so known a Word, as that of Life is. Some gross and confused Conceptions Men indeed ordinarily have, to which they apply the common Words of their Language, and fuch a loofe use of their Words ferves them well enough in their ordinary Discourses or Affairs. But this is not sufficient for Philosophical Enquiries. Knowledge and Reasoning require precise determinate Ideas. And though Men will not be so importunately dull, as not to understand what others say, without demanding an Explication of their Terms; nor so troublesomely critical, as to correct others in the use of the Words they receive from them; yet where Truth and Knowledge are concerned in the Cafe, I know not what Fault it can be to defire the Explication of Words, whose Sense seems dubious; or why a Man should be ashamed to own his Ignorance, in what Sense another Man uses his Words, fince he has no other way of cerrainly knowing it, but by being informed. This Abuse of taking Words upon Trust, has no where spread so far, nor with so ill Effects, as amongst Men of Letters. The Multiplication and Obstinacy of Disputes, which has so laid waste the intellectual World, is owing to nothing more than to this ill use of Words. For though it be generally believed, that there is great Diversity of Opinions in the Volumes and variety of Controversies the World is distracted with; vet the most I can find, that the contending learned Men of different Parties do, in their Arguings one with another, is, that they speak different Languages. For I am apt to imagine, that when any of them quitting Terms, think upon Things, and know what they think, they think all the same: Though perhaps what they would have, be different.

The ends of Language:

The first, To consider this Confideration of the Imperfection and Abuse of Language; the ends of Language in our Discourse with others being chiefly these Three: First, To make known one Man's Thoughts or Ideas to another. Secondly, To do it with as much ease and quickness as is

possible; and Thirdly, Thereby to convey the Knowledge

of Things: Language is either abused, or deficient, when it

fails of any of these Three.

First, Words fail in the first of these Ends, and lay not open one Man's Ideas to another's view. First, When Men have Names in their Mouths without any determined Ideas in their Minds, whereof they are the Signs: Or, Secondly, When they apply the common received Names of any Language to Ideas, to which the common Use of that Language does not apply them: Or Thirdly, When they apply them very unsteadily, making them stand now for one, and by and by for another *Idea*.

6. 24. Secondly, Men fail of conveying their Thoughts, with all the quickness and ease that Secondly, to may be, when they have complex Ideas, without having distinct Names for them. This is some-

do it with quickness.

times the Fault of the Language it felf, which has not in it a Sound yet apply'd to fuch a Signification; and fometimes the Fault of the Man, who has not yet learned the

Name for that *Idea* he would shew another.

6. 25. Thirdly, There is no Knowledge of Thirdly, Things, conveyed by Mens Words, when their Therewith to Ideas agree not to the Reality of Things. Tho' convey the it be a Defect, that has its Original in our Ideas, Knowledge of which are not so conformable to the Nature of Things. Things, as Attention, Study, and Application might make them; yet it fails not to extend it felf to our Words too, when we use them as Signs of real Beings, which

yet never had any Reality or Existence. 6. 26. First, He that hath Words of any Lan-

guage, without distinct Ideas in his Mind, to

Hoav Mens Words fail in

which he applies them, does, so far as he uses them in Discourse, only make a Noise without all these. any Sense or Signification; and how learned foever he may feem by the use of hard Words, or learned Terms, is not much more advanced thereby in Knowledge, than he would be in Learning, who had nothing in his Study but the bare Titles of Books, without possessing the Contents of them. For all fuch Words, however put into Discourse, according to the right Construction of Grammatical Rules, or the Harmony of well turned Periods, do yet amount to nothing but bare Sounds, and nothing else.

6. 27. Secondly, He that has complex Ideas, without particular Names for them, would be in no better a Case than a Bookfeller, who had in his Ware-house Volumes that lay there unbound, and without Titles; which he could therefore make known to others, only by shewing the loose Sheets, and communicate them only by Tale. This Man is hindred in his Discourse for want of Words to communicate his complex Ideas, which he is therefore forced to make known by an Enumeration of the simple ones that compose them; and so is fain often to use twenty Words to express what another Man signifies in one.

§. 28. Thirdly, He that puts not conflantly the same Sign for the same Idea, but uses the same Words sometimes in one, and sometimes in another Signification, ought to pass in the Schools and Conversation for as sair a Man, as he does in the Market and Exchange, who sells several Things under

the same Name.

§. 29. Fourthly, He that applies the Words of any Language to Ideas different from those to which the common Use of that Country applies them, however his own understanding may be filled with Truth and Light, will not by such Words be able to convey much of it to others, without defining his Terms. For however the Sounds are such as are familiarly known, and easily enter the Ears of those who are accustomed to'em; yet standing for other Ideas than those they usually are annexed to, and are wont to excite in the mind of the Hearers, they cannot make known the Thoughts of him who thus uses'em.

§. 30. Fifthly, He that hath imagined to himself Substances such as never have been, and filled his Head with Ideas which have not any correspondence with the real Nature of Things, to which yet he gives settled and defined Names, may fill his Discourse, and perhaps another Man's Head, with the santastical Imaginations of his own Brain, but will be very far from advancing thereby one jot in real and true Knowledge.

6. 31. He that hath Names without *Ideas*, wants meaning in his Words, and fpeaks only empty Sounds. He that hath complex *Ideas* without Names for them, wants Liberty and Difpatch in his Expressions, and is necessitated to use Periphrases. He that uses his Words loosly and unsteadily, will either be not minded, or not understood. He that applies his Names to *Ideas* different from their common Use, wants Propriety in his Language, and speaks Gibberish. And he that hath *Ideas* of Substances, disagreeing with the real Existence of Things, so far wants the Materials of true Knowledge in his Understanding, and hath instead thereof *Chimera's*.

How in Subwe are liable to all the former Inconveniences; v.g. He that uses the word Tarantula, without having any Imagination or Idea of what it stands for, pronounces a good Word; but so long means nothing at all by it. 2. He that in a new-discovered Country shall see several forts of Animals and Vegetables, unknown to him before, may have as true Ideas of them, as of a Horse, or a Stag; but can speak of them only by a Description, till he shall either take the Names the Natives call them by, or give them Names himself. 5. He that uses the Word Body sometimes for pure Extension, and sometimes for Extension and Solidity together, will talk very fallaciously. 4. He that gives the Name Horse to that Idea which common Usage calls Mule, talks improperly, and will not be understood. 5. He that thinks the Name Centaur stands for some real Being, imposes on himself, and mistakes Words for Things.

9. 33. In Modes and Relations generally we are liable only to the Four first of these Inconveniences, (viz.) 1. I may have in my Memory the Names of Modes, as Gratitude, or Charity,

How in Modes and Relations.

the Names of Modes, as Gratitude, or Charity, and yet not have any precise Ideas annexed in my Thoughts to those Names. 2. I may have Ideas, and not know the Names that belong to them; v.g. I may have the Idea of a Man's drinking, till his Colour and Humour be altered, till his Tongue trips, and his Eyes look red, and his Feet fail him, and yet not know, that it is to be called Drunkenness. 3. may have the Ideas of Virtues or Vices, and Names also, but apply them amis: v. g. when I apply the Name Frugality to that Idea which others call and fignify by this Sound, Covetousness. 4. I may use any of those Names with incontrancy. 5. But in Modes and Relations, I cannot have Ideas disagreeing to the Existence of Things: for Modes being complex Ideas, made by the Mind at pleasure; and Relation being but my way of confidering or comparing two Things together, and so also an Idea of my own making, these Ideas can scarce be found to difagree with any thing existing; since they are not in the Mind, as the Copies of Things regularly made by Nature, nor as Properties inseparably flowing from the internal Constitution or Essence of any Substance; but, as it were, Patterns lodged in my Memory, with Names annexed to them, to denominate Actions and Relations by, as they come to exist. But the mistake is commonly in my giving a wrong Name to my Conceptions; and fo using Words in a different Sense from other People, I am not understood, but am thought to have wrong Ideas of them, when I give wrong Names to

them. Only if I put in my *Ideas* of mixed Modes or Relations, any inconfistent *Ideas* together, I fill my Head also with *Chimera's*; fince such *Ideas*, if well examined, cannot so much as exist in the Mind, much less any real Being be ever denominated from them.

Seventhly, Figurative Speech also an Aouse of Language. 6. 34. Since Wit and Fancy finds easier entertainment in the World, than dry Truth and real Knowledge, figurative Speeches, and allusion in Language, will hardly be admitted, as an Imperfection or Abuse of it. I confess, in Discourses, where we seek rather Pleasure and Delight than Information and Improvement,

fuch Ornaments as are borrowed from them, can scarce pass But yet, if we would speak of Things as they are, we must allow, that all the Art of Rhetorick, besides Order and Clearness, all the artificial and figurative Application of Words Eloquence hath invented, are for nothing else but to infinuate wrong Ideas, move the Passions, and thereby mislead the Judgment, and so indeed are perfect Cheats: And therefore however laudable or allowable Oratory may render them in Harangues and popular Addresses, they are certainly, in all Discourses that pretend to inform or instruct, wholly to be avoided; and where Truth and Knowledge are concerned. cannot but be thought a great Fault, either of the Language or Person that makes use of them. What, and how various they are, will be superfluous here to take Notice; the Books of Rhetorick which abound in the World, will instruct those who want to be informed. Only I cannot but observe, how little the Preservation and Improvement of Truth and Knowledge, is the Care and Concern of Mankind; fince the Arts of Fallacy are endowed and preferred. 'Tis evident how much Men love to deceive, and be deceived, fince Rhetorick, that powerful Instrument of Error and Deceit, has its established Professors, is publickly taught, and has always been had in great Reputation: And, I doubt not, but it will be thought great Boldness, if not Ecutality, in me to have said thus much against it. Eloquence, like the fair Sex, has too prevailing Beauties in it, to suffer it self ever to be spoken against. And 'tis in vain to find fault with those Arts of Deceiving, wherein Men find pleasure to be Deceived.

CHAP. XI.

Of the Remedies of the foregoing Impersections and Abuses.

HE natural and improved Imperfections of Languages, we have seeking. feen above at large; and Speech

They are worth

being the great Bond that holds Society together, and the common Conduit, whereby the Improvements of Knowledge are conveyed from one Man, and one Generation to another, it would well deferve our most serious Thoughts, to consider what Remedies are to be found for these Inconveniences above mentioned.

G. 2. I am not fo vain to think, that any one can pretend to attempt the perfect Reforming Are not easy. the Languages of the World, no not so much

as of his own Country, without rendring himself ridiculous. To require that Men should use their Words constantly in the same Sense, and for none but determined and uniform Ideas, would be to think, that all Men should have the same Notions, and should talk of nothing but what they have clear and distinct Ideas of. Which is not to be expected by any one, who hath not Vanity enough to imagine he can prevail with Men to be very knowing or very filent. And he must be very little skilled in the World, who thinks that a voluble Tongue shall accompany only a good Understanding; or that Mens talking much or little, shall hold Proportion only to their Knowledge.

6. 3. But though the Market and Exchange But yet nemust be left to their own ways of Talking, and offary to Phi-Goffippings not to be robbed of their antient lojopby. Privilege; though the Schools, and Men of Ar-

gument, would perhaps take it amiss to have any thing offered. to abate the length, or lessen the number of their Disputes; yet, methinks those who pretend seriously to search after or maintain Truth, should think themselves obliged to study how they might deliver themselves without Obscurity, Doubtfulness, or Equivocation, to which Mens Words are naturally liable, if care be not taken.

Milale of Errors.

6. 4. For he that shall well consider the Errors and Obscurity, the Mistakes and Concause of great fusion, that are spread in the World by an ill use of Words, will find some Reason to doubt, whether Language, as it has been employ'd, has

contributed more to the Improvement or Hindrance of Knowledge amongst Mankind. How many are there, that when they would think on things, fix their Thoughts only on Words, especially when they would apply their Minds to moral Matters? And who then can wonder, if the refult of such Contemplations and Reasonings, about little more than Sounds. whilft the Ideas they annexed to them, are very confused, or very unsteady, or perhaps none at all; who can wonder, I fay, that fuch Thoughts and Reasonings end in nothing but Obscurity and Mistake, without any clear Judgment or Knowledge?

6. 5. This Inconvenience, in an ill use of Words, Men suffer in their own private Medi-Obstinancy. tations; but much more manifest are the Dis-

orders which follow from it, in Conversation, Discourse, and Arguings with others. For Language being the great Conduit, whereby Men convey their Discoveries, Reasonings, and Knowledge, from one to another, he that makes an ill use of it, though he does not corrupt the Fountains of Knowledge, which are in Things themselves; yet he does, as much as in him lies, break or stop the Pipes, whereby it is distributed to the publick use and advantage of Mankind. He that uses Words without any clear and iteady meaning, What does he but lead himself and others into Errors? And he that designedly does it, ought to be looked on as an Enemy to Truth and Knowledge. And yet who can wonder, that all the Sciences and Parts of Knowledge, have been so over-charged with obscure and equivocal Terms, and infignificant and doubtful Expressions, capable to make the most attentive or quickfighted, very little or not at all the more Knowing or Orthodox; fince Subtlety in those who make Profession to teach or defend Truth, hath passed so much for a Vertue. A Vertue, indeed, which confifting for the most part, in nothing but the fallacious and illusory use of obscure or deceitful Terms, is only fit to make Men more conceited in their Ignorance, and obflinate in their Errors.

6.6. Let us look into the Books of Controverfy And wrang- of any kind, there we shall see, that the effect of obscure, uniteady or equivocal Terms, is nothing but noise and wrangling about Sounds, without convincing or bettering a Man's Understanding. For if the Idea be not agreed on, betwixt the Speaker and Hearer, for which the Words stand, the Argument is not about Things, but Names. As often as such a Word, whose Signification is not ascertained betwixt them, comes in Use, their Understandings have no other Object wherein they agree, but barely the Sound, the Things that they think on at that time, as expressed by that Word, being quite different.

6.7. Whether a Bat be a Bird, or no, is not Inflance, Bat a Question; whether a Bat be another thing and Bird. than indeed it is, or have other Qualities than indeed it has, for that would be extremely abfurd to doubt of: But the Question is, 1. Either between those that acknowledged themselves to have but imperfect Ideas of one or both of those forts of Things, for which these Names are supposed to stand; and then it is a real Enquiry concerning the Nature of a Bird or a Bat, to make their yet imperfect Ideas of it more compleat, by examining, whether all the fimple Ideas, to which, combined together, they both give the Name Bird, be all to be found in a Bat: But this is a Question only of Enquirers, (not Disputers) who neither affirm, nor deny, but examine : Or, 2. It is a Question between Difputants, whereof the one affirms, and the other denies, that a Bat is a Bird. And then the Question is barely about the Signification of one, or both these Words; in that they not having both the fame complex Ideas, to which they give thefe two Names; one holds, and t'orher denies, that thefe two Names may be affirmed one of another. Were they agreed in the Signification of these two Names, it were impossible they should dispute about them. For they would presently and clearly fee, (were that adjusted between them) whether all the simple Ideas, of the more general Name Bird, were found in the complex Idea of a Bat, or no; and fo there could be no doubt whether a Bat were a Bird or no. And here I defire it may be confidered, and carefully examined, whether the greatest part of the Disputes in the World are not merely Verbal, and about the Signification of Words; and whether if the Terms they are made in, were defined, and reduced in their Signification (as they must be, where they fignify any thing) to determined Collections of the fimple Ideas they do or should stand for, those Disputes would not end of themselves, and immediately vanish. I leave it then to be considered, what the learning of Dispuration is, and how well they are employ'd for the Advantage of themselves, or others, whose Business is only

the vain Oftentation of Sounds, i. e. those who spend their Lives in Disputes and Controversies. When I shall see any of those Combatants strip all his Terms of Ambiguity and Obscurity (which every one may do in the Words he uses himself) I shall think him a Champion for Knowledge, Truth, and Peace, and not the Slave of Vain Glory, Ambition, or a Party.

First. Remedy to use no Word without an Idea.

Secondly, to

have distinct Ideas annex'd

to them in

Modes.

6. 8. To Remedy the Defects of Speech beforementioned, to some Degree, and to prevent the Inconveniences that follow from them, I imagine the Observation of these following Rules may be of use, till some Body better able shall judge it worth his while, to think more maturely on this Mat-

ter, and oblige the World with his Thoughts on it.

First, A Man should take care to use no Word without a Signification, no Name without an Idea for which he makes it stand. This Rule will not feem altogether needless, to any one who shall take the Pains to recollect how often he has met with fuch Words; as Instinct, Simpathy, and Antipathy, &c. in the Discourse of others, so made use of, as he might easily conclude, that those that used them had no Ideas in their Minds to which they apply'd them; but spoke them only as Sounds, which usually served instead of Reasons, on the like Occasions. Not but that these Words, and the like, have very proper Significations in which they may be used; but there being no natural Connection between any Words, and any Ideas, these, and any other, may be learned by rote, and pronounced or writ by Men who have no Ideas in their Minds, to which they have annexed them, and for which they make them stand; which is necessary they should, if Men would speak intelligibly even to themselves alone.

6. 9. Secondly, 'Tis not enough a Man uses his Words as signs of some Ideas, those Ideas he annexes them to, if they be simple, must be clear and distinct; if complex, must be determinate, i. e. the precise collection of simple Ideas fettled in the Mind, with that

Sound annexed to it, as the Sign of that precise determined Collection, and no other. This is very necessary in Names of Modes, and especially moral Words; which having no fettled Objects in Nature, from whence their Ideas are taken, as from their Original, are apt to be very confused. Justice is a Word in every Man's Mouth, but most commonly with a very undetermined loofe Signification: Which will always be fo, unless a Man has in his Mind a distinct Comprehention hension of the component parts, that complex Idea consists of; and if it be decompounded, must be able to resolve it still on, till he at last comes to the simple Ideas that make it up: And unless this be done, a Man makes an ill use of the Word, let it be Justice, for example, or any other. I do not fay, a Man need stand to recollect, and make this Analysis at large every time the word Justice comes in his way: But this, at least, is necessary, that he have so examined the Signification of that Name, and fettled the Idea of all its Parts in his Mind, that he can do it when he pleases. If one who makes his complex Idea of Justice, to be such a treatment of the Person or Goods of another, as is according to Law, hath not a clear and distinct Idea what Law is, which makes a part of his complex Idea of Justice, 'tis plain, his Idea of Justice it felf will be confused and imperfect. This exactness will, perhaps, be judged very troublesome; and therefore most Men will think they may be excused from settling the complex Ideas of mixed Modes so precisely in their Minds. But yet I must say, till this be done, it must not be wondred, that they have a great deal of Obscurity and Confusion in their own Minds, and a great deal of Wrangling in their Discourses with others.

§. 10. In the Names of Substances, for a right use of them, something more is required than barely determined Ideas: In these the Names must also be conformable to Things, as they

And conformable in Substances.

must also be conformable to Things, as they exist: But of this I shall have occasion to speak more at large by and by. This Exactness is absolutely necessary in Enquiries after Philosophical Knowledge, and in Controversics about Truth. And though it would be well too, if it extended it self to common Conversation, and the ordinary Affairs of Life; yet I think that is scarce to be expected. Vulgar Notions suit Vulgar Discourses; and both, though consused enough, yet serve pretty well the Market, and the Wake. Merchants and Lovers, Cooks and Taylors, have Words wherewithal to dispatch their ordinary Affairs; and so, I think, might Philosophers and Disputants too, if they had a Mind to understand, and to be clearly understood.

6. 11. Thirdly, 'Tis not enough that Men have Ideas, determined Ideas, for which they make these Signs stand; but they must also take Propriety. care to apply their Words, as near as may be, to such Ideas as common use has annexed them to. For Words, especially of Languages already framed, being no Man's private Possession, but the common Measure of Commerce and Communication,

munication, 'tis not for any one, at Pleasure, to change the Stamp they are current in; nor alter the Ideas they are affixed to; or at least when there is a Necessity to do fo, he is bound to give Notice of it. Men's Intentions in speaking are, or at least should be, to be understood; which cannot be without frequent Explanations, Demands, and other the like incommodious Interruptions, where Men do not follow common Use. Propriety of Speech, is that which gives our Thoughts entrance into other Men's Minds with the greatest Base and Advantage; and therefore deferves fome part of our Care and Study, especially in the Names of moral Words. The proper Signification and Use of Terms, is best to be learned from these, who in their Writings and Discourses, appear to have had the clearest Notions, and apply'd to them their Terms with the exactest choice and fitness. This way of using a Man's Words, according to the Propriety of the Language, tho' it have not always the good Fortune to be understood; yet most commonly leaves the blame of it on him, who is so untkilful in the Language he speaks as not to understand it, when made ufz of as it ought to be.

Fourthly, to has not so visibly annexed any Signification to make known their meaning. Words, as to make Men know always certainly what they precisely stand for: And because Men in the Improvement of their Knowledge,

come to have *Ideas* different from the vulgar and ordinary received ones, for which they must either make new Words, (which Men seldom venture to do, for sear of being thought guilty of Affectation or Novelty,) or else must use old ones, in a new Signification. Therefore after the Observation of the foregoing Rules, it is sometimes necessary for the ascertaining the Signification of Words, to declare their Meaning; where either common Use has lest it uncertain and loose, (as it has in most Names of very complex *Ideas*) or where the Term, being very material in the Discourse, and that upon which it chiefly turns, is liable to any Doubtfulness or Mittake.

Ind that tire ways.

On 13. As the Ideas, Mens Words stand for, are of different sorts; so the way of making known the Ideas, they stand for, when there is Occasion, is also different. For though defining be thought the proper way to make known the proper Signification of Words; yet there are some Words that will not be defined, as there are others, whose precise Meaning cannot be made known, but by Desinition; and, perhaps, a third, which partake somewhat of both

both the other, as we shall see in the Names of simple Ideas, Modes and Substances.

6. 14. First, When a Man makes use of the Name of any simple Idea, which he perceives is not understood, or is in danger to be mistaken, he is obliged by the Laws of Ingenuity, and the end of Speech, to declare his meaning,

First, In simple Ideas by Synonymous term., or Porwing.

and make known what *Idea* he makes it stand for. This, as has been shewn, cannot be done by Definition; and therefore, when a fynonymous Word fails to do it, there is but one of these ways left. First, Sometimes the naming the Subject, wherein that simple Idea is to be found, will make its Name be understood by those who are acquainted with that Subject, and know it by that Name. So to make a Countryman understand what Fueillemorte Colour fignifies, it may fuffice to tell him, 'tis the Colour of withered Leaves falling in Autumn. Secondly, But, the only fure way of making known the Signification of the Name of any simple Idea, is by presenting to his Senses that Subject, which may produce it in his Mind, and make him actually have the Idea that Word stands for.

6. 15. Secondly, Mixed Modes, especially those belonging to Morality, being most of them fuch Combinations of Ideas as the Mind puts

Secondle, In mixed Modes,

b; Definition. together of its own choice; and whereof there are not always standing Patterns to be found existing, the Signification of their Names cannot be made known, as those of fimple Ideas, by any shewing; but in recompence thereof, may be perfectly and exactly defined. For they being Combinations of feveral Ideas that the Mind of Man has arbitrarily put together, without reference to any Archetypes, Men may, if they please, exactly know the Ideas that go to each Coniposition, and so both use these Words in a certain and undoubted Signification, and perfectly declare, when there is Occasion, what they stand for. This, if well considered, would lay great blame on those who make not their Discourses about moral Things very clear and distinct. For fince the precise Signification of the Names of mixed Modes, or which is all one, the real Essence of each Species, is to be known, they being not of Nature's, bur Man's making, it is a great Negligence and Perverseness, to discourse of moral Things with Urcertainty and Obscurity, which is more pardonable in treating of natural Substances, where doubtful Terms are hardly to be avoided, for a quite contrary Reafon, as we shall see by and by.

Vol. II.

Morality capable of Demonfiration. 6. 16. Upon this Ground it is, that I am bold to think, that Morality is capable of Demonstration, as well as Mathematicks: Since the precise real Essence of the Things moral Words stand for, may be perfectly known; and

fo the Congruity of Incongruity of the Things themselves be certainly discovered, in which confists perfect Knowledge. Nor let any one object, That the Names of Substances are often to be made use of in Morality, as well as those of Modes, from which will arise Obscurity. For as to Substances, when concerned in moral Discourses, their divers Natures are not so much enquired into, as supposed; v.g. when we say that Man is subject to Law: We mean nothing by Man, but a corporeal rational Creature: What the real Effence or other Qualities of that Creature are in this Case, is no way considered. therefore, whether a Child or Changeling be a Man in a phyfical Sense, may amongst the Naturalists be as disputable as it will, it concerns not at all the Moral Man, as I may call him, which is this immoveable unchangeable Idea, a corporcal rational Being. For were there a Monkey, or any other Creature to be found, that had the use of Reason, to such a degree, as to be able to understand general Signs, and to deduce Confequences about general Ideas, he would no doubt be fubjest to Law, and in that Sense, be a Man, how much soever he differed in Shape from others of that Name. The Names of Subfrances, if they be used in them, as they should, can no more diffurb Moral, than they do Mathematical Discourses: Where, if the Mathematician speaks of a Cube or Globe of Gold, or any other Body, he has his clear fettled Idea which varies not, though it may by mistake be applied to a particular Body to which it belongs not.

Definitions can make moral Difeourfes char. §. 17. This I have here mentioned by the bye, to shew of what Consequence it is for Men, in their Names of mixed Modes, and consequently in all their moral Discourses, to define their Words when there is Occasion: Since thereby meral Knowledge may be brought to so great

Clearness and Certainty. And it must be great want of Ingenuity, (to say no worse of it) to resuse to do it: Since a Definition is the only way, whereby the precise Meaning of moral Words can be known; and yet a way, whereby their Meaning may be known certainly, and without leaving any room for any contest about it. And therefore the Negligence or Perverseness of Mankind cannot be excused, if their Discourses in Morality

Morality be not much more clear, than those in Natural Philosophy; since they are about Ideas in the Mind, which are none of them false or disproportionate; they having no external Beings for the Arckety pes which they are referr'd to, and must correspond with. It is far easier for Men to frame in their Minds an Idea, which shall be the Standard to which they will give the Name Fustice, with which Pattern so made, all Actions that agree shall pass under that Denomination, than, having seen Aristides, to frame an Idea that shall in all Things be exactly like him, who is as he is, let Men make what Idea they please of him. For the one, they need but know the Combination of Ideas that are put together within in their own Minds; for the other, they must enquire into the whole Nature, and abstruse hidden Constitution, and various Qualities of a thing existing without them.

6. 18. Another Reason that makes the defining of mixed Modes so necessary, especially of only way.

And is the moral Words, is what I mentioned a little be-

fore, viz. That it is the only way whereby the Signification of the most of them can be known with Certainty. For the Ideas they stand for, being for the most part such, whose component Parts no where exist together, but scattered and mingled with others, it is the Mind alone that collects them, and gives them the Union of one Idea: and it is only by Words, enumerating the several simple Ideas which the Mind has united, that we can make known to others what their Names stand for; the Assistance of the Senses in this Case not helping us, by the Proposal of sensible Objects, to show the Ideas, which our Names of this kind stand for, as it does often in the Names of sensible simple Ideas, and also to some Degree in those of Substances.

6. 19. Thirdly, For the explaining the Signification of the Names of Substances as they stand for the Ideas we have of their distinct Species, both the forementioned ways, viz. of shereing and defining are consisted in many Cases to

Thirdly, In Subflances, by forcing and defining.

ing and defining, are requisite, in many Cases, to be made use of. For there being ordinarily in each fort some leading Qualities, to which we suppose the other Licas, which make up our complex Idoa of that Species, annexed, we forwardly give the specifick Name to that thing, wherein that characteristical Mark is sound, which we take to be the most distinguishing Idea of that Species. These leading or characteristical (as I may so call them) Ideas, in the focts of Animals and Vegetables, is (as has been before remarked, Ch. Vi. s. 29. and Ch. IX. §. 15.) mostly Figure, and in inanimate Bodies Colour, and in some both tegether. Now,

Ideas of the leading Qualities of Substances, are best got by sheaving. §. 20. These leading sensible Qualities are those which make the chief Ingredients of our specifick Ideas, and consequently the most observable and unvariable part in the Definitions of our specifick Names, as attributed to Sorts of Substances coming under our Knowledge. For

though the Sound Man, in its own Nature, be as apr to fignify a complex Idea made up of Animality and Rationality, united in the same Subject, as to fignify any other Combination; yet used as a Mark to stand for a fort of Creatures we count of our own kind, perhaps the outward Shape is as necesfary to be taken into our complex Idea, fignified by the word Man, as any other we find in it; and therefore why Plato's Animal in plume Bipes latis unguibus, should not be as good a Definition of the Name Man, standing for that fort of Creatures, will not be eafy to shew: For 'tis the Shape, as the leading Quality, that feems more to determine that Species, than a Faculty of Reasoning, which appears not at first, and in some never. And if this be not allowed to be so, I do not know how they can be excused from Murder, who kill monstrous Births, (as we call them) because of an unordinary Shape, without knowing whether they have a rational Soul, or no; which can be no more discerned in a well formed, than ill shaped Infant, as foon as born. And who is it has informed us, that a rational Soul can inhabit no Tenement, unless it has just such a fort of Frontispiece, or can join it felf to, and inform no fort of Body but one that is just of such an outward Structure?

Ideas of the leading Qualities of Subflances, are beft got by showing. S, 21. Now these leading Qualities are best made known by showing, and can hardly be made known otherwise. For the Shape of an Horse, or Cassuary, will be but rudely and imperfectly imprinted on the Mind by Words, the fight of the Animals doth it a thousand times

better: And the *Idea* of the particular Colour of *Gold* is not to be got by any Description of it, but only by the frequent Exercise of the Eyes about it, as is evident in those who are used to this Metal, who will frequently distinguish true from counterseit, pure from adulterate, by the Sight, where others (who have as good Eyes, but yet, by use, have not got the precise nice *Idea* of that peculiar Yellow) shall not perceive any Disserce. The like may be said of those other simple *Ideas* peculiar in their kind to any Substance; for which precise *Ideas*, there are no peculiar Names. The particular Ringing Sound there is in *Gold*, distinct from the Sound of other

other Bodies, has no particular Name annexed to it, no more than the particular Yellow that belongs to that Metal.

6. 22. But because many of the simple Ideas that make up our specifick Ideas of Substances, are Powers which lie not obvious to our Senses in the Things as they ordinarily appear; therefore, in the Signification of our Names of Substances, some part of the Signification will be

The Ideas of their Powers, best by Desiri-

better made known by enumerating those simple Ideas, there in shereing the Substance it self. For he that, to the yellow shining Colour of Gold got by sight, shall from my enumerating them, have the Ideas of great Ductility, Fusibility, Fixedness, and Solubility in Aq. Regia, will have a perfecter Idea of Gold, than he can have by seeing a piece of Gold, and thereby imprinting in his Mind only its obvious Qualities. But if the formal Constitution, of this shining heavy ductil thing, (from whence all these its Properties flow) lay open to our Senses, as the formal Constitution, or Essence of a Triangle does, the Signification of the Word Gold might as easily be ascertained as that of Triangle.

§. 23. Hence we may take Notice, how much the Foundation of all our Knowledge of corporeal Things lies in our Senses. For how Spirits, separate from Bodies, (whose Knowledge and Ideas of these Things, are certainly much

A Reflection on the Know.

ledge of Spirits.

more perfect than ours) know them, we have no Notion, no Idea at all. The whole extent of our Knowledge, or Imagination, reaches not beyond our own Ideas, limited to our ways of Perception. Though yet it be not to be doubted, that Spirits of a higher Rank than those immersed in Fless, may have as clear Ideas of the radical Constitution of Substances, as we have of a Triangle, and so perceive how all their Properties and Operations flow from thence: but the manner how they come by that Knowledge, exceeds our Conceptions.

6. 24. But though Definitions will ferve to explain the Names of Substances, as they stand for our *Ideas*; yet they leave them not without great Imperfection, as they stand for Things. For our Names of Substances being not put barely for our *Ideas*, but being made use of ultimately

Ideas also of Substances must be conformable to Things.

to represent Things, and so are put in their Place, their Signification must agree with the Truth of Things, as well as with Mens Ideas. And therefore in Substances, we are not always to test in the ordinary complex Idea, commonly received as the

À 2

Signification

Signification of that Word, but must go a little farther, and enquire into the Nature and Properties of the Things themselves, and thereby perfect, as much as we can, our Ideas of their distinct Species; or else learn them from such as are used to that fort of Things, and are experienced in them. For fince 'tisintended their Names should stand for such Collections of simple Ideas as do really exist in Things themselves, as well as for the complex Idea in other Mens Minds, which in their ordinary Acceptation they stand for: therefore to define their Names right, natural History is to be enquired into; and their Properties are, with Care and Examination, to be found out. For it is not enough, for the avoiding Inconveniences in Discourses and Arguings about natural Bodies and substantial Things, to have learned from the Propriety of the Language, the common, but confused, or very imperfect Idea, to which each Word is applied, and to keep them to that Idea in our use of them: but we must, by acquainting our felves with the History of that fort of things rectify and fettle our complex Idea, belonging to each specifick Name; and in Discourse with others, (if we find them mistake us) we ought to tell what the complex Idea is that we make fuch a Name stand for. This is the more neceffary to be done by all those who search after Knowledge, and Philosophical Verity, in that Children being taught Words whilst they have but imperfect Notions of Things, apply them at Random, and without much thinking, and feldom frame determined Ideas to be fignified by them. Which Custom, (it being easy, and serving well enough for the ordinary Affairs of Life and Conversation) they are apt to continue, when they are Men: And so begin at the wrong end, learning Words first, and perfectly, but make the Notions to which they apply those Words afterwards, very overtly. By this means it comes to pass, that Men speaking the proper Language of their Country, i. e. according to Grammar Rules of that Language, do yet speak very improperly of Things themselves; and by their arguing one with another, make but small Progress in the Discoveries of useful Truths, and the Knowledge of Things, as they are to be found in themselves, and not in our Imaginations; and it matters not much, for the Improvement of our Knowledge, how they are called.

Net case to be wish'd, That be made so. 25. It were therefore to be wish'd, That Men, versed in Physical Enquiries, and acquainted with the several sorts of natural Bodies, would set down those simple Ideas, wherein they observe the Individuals of each fort constantly to agree. This would remedy a

great

great deal of that Confusion which comes from several Persons. applying the same Name to a Collection of a smaller or greater number of sensible Qualities, proportionably as they have been more or lefs acquainted with, or accurate in examining the Qualities of any fort of Things, which come under one Denomination. But a Dictionary of this fort, containing, as it were, a Natural History, requires too many Hands, as well as too much Time, Coft, Pains and Sagacity, ever to be hoped for; and till that be done, we must content our selves with such Definitions of the Names of Substances, as explain the Sense Men use them in. And 'twould be well, where there is Occasion, if they would afford us fo much. This yet is not usually done; but Men talk to one another, and dispute in Words, whose meaning is not agreed between them, out of a mistake, that the Signification of common Words are certainly established, and the precise Ideas, they stand for, perfectly known; and that it is a Shame to be ignorant of them. Both which Suppositions are false: no Names of complex Ideas having so fertiled determined Significations, that they are confrantly used for the fame precise Ideas. Nor is it a Shame for a Man not to have a certain Knowledge of any thing, but by the necessary ways of attaining it; and fo it is no discredit not to know what precise Idea any Sound frands for in another Man's Mind, without he declare it to me by some other way than barely use g that Sound, there being no other way, without fuch a Declared in certainly to know it. Indeed, the necessity of Communication by Language, brings Men to an Agreement in the Signification of commonWords, within fome tolerable latitude, that may ferve for ordinary Conversation; and so a Man cannot be supposed wholly ignorant of the Ideas which are annexed to Words by common Use, in a Language familiar to him. But common Use being but a very uncertain Rule, which reduces it self at last to the Ideas of particular Men, proves often but a very variable Standard. But the' fuch a Distionary, as I have abovemention'd, will require too much Time, Cost, and Pains, to be hop'd for in this Age; yet, methinks, it is not unreasonable to propose, that Words standing for Things, which are known and distinguish'd by their outward Shapes, should be expressed by little Draughts and Prints made of 'em. A Vocabulary made after this Fashion, would, perhaps with more ease, and in less time, teach the true Signification of many Terms, especially in Languages of remote Countries or Ages, and fettle truer Ideas in Mens Minds of Several Things, whereof we read the Names in antient Authors, than all the large and laborious Commands l a

of learned Criticks. Naturalists, that treat of Plants and Animals, have found the Benefit of this way: And he that has had occasion to consult them, will have reason to confess, that he has a clearer Idea of Apium or Ibea, from a little Print of that Herb, or Beaft, than he could have from a long Definition of the Names of either of them. And so no doubt, he would have of Strigil and Sistrum, if instead of a Curry-comb and Cymbal, which are the English Names Dictionaries render them by, he could fee flamp'd in the Margin, small Pictures of these Instruments, as they were in use amongst the Antients. Toga, Tunica, Pallium, are Words eafily translated by Gown, Coat, and Cloak; but we have thereby no more true Ideas of the Fashion of those Habits amongst the Romans, than we have of the Faces of the Taylors who made 'em. Such things as thefe, which the Eye diffinguishes by their Shapes, would be best let into the Mind by Draughts made of 'em, and more determine the Signification of fuch Words, than any other Words fet for 'em, or made use of to define 'em. But this only by the bye.

Fijihly, By Conflancy in their Signification. §. 26. Fifthly, If Men will not be at the Pains to declare the meaning of their Words, and Definitions of their Terms are not to be had; yet this is the least can be expected, that in all Discourses

wherein one Man pretends to instruct or convince another, he should use the same Word constantly in the same Sense: If this were done, (which no Body can refuse without great Disingenuity) many of the Books extant might be spared, many of the Controversies in Dispute would be at an end, several of thosegreat Volumes, swollen with ambiguous Words, now used in one Sense, and by and by in another, would shrink into a very narrow compass; and many of the Philosophers (to mention no other) as well as Poets Works, might be contained in a Nut shell.

6. 27. But after all, the Provision of Words is When the Vafo scanty in respect of that infinite variety of ricition is to Thoughts, that Men, wanting Terms to fuit their be explained. precise Notions, will, notwithstanding their utmost caution, be forced often to use the same Word, in somewhat different Senses. And though in the Continuation of a Discourse, or the Pursuit of an Argument, there be hardly room to digress into a particular Definition, as often as a Man varies the Signification of any Term; yet the import of the Discourse will, for the most part, if there be no defigned Fallacy, fufficiently lead candid and intelligent Readers, into the true meaning of it: but where that is not sufficient to guide the Reader, there it concerns the Writer to amplain his meaning, and shew in what Sense he there uses that Term. BOOK

BOOK IV.

CHAP. I.

Of Knowledge in General,

6. 1. INCE the Mind, in all its Thoughts and Reasonings, hath no other immediate Object but its own Ideas, which it alone does or can contemplate, it is evident, that our Knowledge is only converfant about 'em.

6. 2. Knowledge then seems to me to be no-

thing but the Perception of the Connection and Agreement, or Disagreement and Repugnancy

of any of our Ideas. In this alone it confifts. Where this Perception is, there is Knowledge; and where it is not, there, though we may fancy, guess, or believe, yet we always come short

ledge converfant about our Ideas.

Our Known

Knowledgarepsilon is the Perception of the Agreement or Dijagreement of two I-

of Knowledge. For when we know that White is not Black, what do we else but perceive, that these two Ideas do not agree? When we possess our selves with the utmost Security of the Demonstration, that the three Angles of a Triangle are equal to two right ones, What do we more but perceive, that Equality to two right ones, does necessarily agree to, inseparable from, the three Angles of a Triangle? *

Ģ. 3.

+ In l.is 2d Letter to the Bishop of Wor-Ceffer, p. 82.

thip has endeavoured to diffend: 'Tis plain, 'tis but your Lordship's Fear, that it may be of dangerous Consequence to it, which, as I humbly conceive, is no Proof that it is any very inconfishent with that Article.

^{*} The placing of Certainty, as Mr. Locke does, in the Perception of the Agreement or Disagreement of our Ideas, the Bishop of Worcester fuspects may be of dangerous Consequence to that Article of Faith which he has endeavoured to defend; to which Mr. Locke anfwers, + Since your Lordship hath not, as I remember, flewn, or gene about to flew, how this Proposition, viz. that Certainty confifts in the Perception of the Agreement or Disagreement of two Ideas, is opposite or inconfittent with that Article of Faith, which your Lord-

This Agreement fourfold. 6. 3. But to understand a little more distinctly, wherein this Agreement or Disagreement confists, I think we may reduce it all to these four Sorts:

1. Identity, or Diversity.

2. Relation.

3. Co-existence, or necessary Connection.

4. Real Existence.

First, Of Identity, or Diversity.

S. 4. First, As to the first fort of Agreement or Disagreement, viz. Identity, or Diversity.

Tis the first Act of the Mind, when it has any Sentiments or Ideas at all, to perceive its Ideas, and so far as it perceives them, to

know each what it is, and thereby also to perceive their difference, and that one is not another. This is so absolutely necessary, that without it there could be no Knowledge, no

Reafoning,

No Body, I think, can blame your Lordship, or any one else, for being concerned for any Article of the Christian Faith; but if that Concern (as it may, and as we know it has done) make any one apprehend Danger, where no Danger is; are we, therefore, to give up and condemn any Proposition, because any one, though of the first Rank and Magnitude, fears it may be of dangerous Consequence to any Truth of Religion, without shewing that it is so? If such Fears be the Measures whereby to judge of Truth and Falfhood, the affirming that there are Antipodes would be still a Herefy; and the Doctrine of the Motion of the Earth, must be rejected, as overthrowing the Truth of the Scripture; for of that dargerous Confequence it has been apprehended to be, by many learned and pious Divines, out of their great Concern for Religion. And yet, notwithstanding those great Apprehensions of what dangerous Consequence it anight be, it is now univerfally received by Learned Men, as an undoubted Truth; and writ for by some, whose Belief of the Scriptures is not at all questioned; and particularly, very lately, by a Divine of the Church of England, with great Strength of Reason, in his wonderfully ingenious News Theory of the Earth.

The Reason your Lordship gives of your Fears, that it may be of such dangerous Consequence to that Article of Faith, which your Lordship endeavours to defend, though it occur in more Places than one, is only this, viz. That it is made use of by ill Men to do Mischief, i. e. to oppose that Article of Faith, which your Lordship hath endeavoured to defend. But, my Lord, if it be a Reason to lay by any thing, as bad, because it is, or may be used to an ill Purpose, I know not what will be innocent enough to be kept. Arms, which were made for our Desence, are sometimes made use of to do Mischief; and yet they are not thought of dangerous Consequence for all that. No Body lays by his Sword and Pistols, or thinks 'em of such dangerous Consequence as to be neglected, or thrown away,

because

Reasoning, no Imagination, no distinct Thoughts at all. By this the Mind clearly and infallibly perceives each Idea to agree with it felf, and to be what it is; and all distinct Ideas to difagree, i.e. the one not to be the other: And this it does without Pains, Labour, or Deduction; but at first view, by its natural Power of Perception and Diffinction. And though Men of Art have reduced this into those general Rules, What is, is ; and It is impossible for the same thing to be, and not to be; for ready Application in all Cases, wherein there may be occasion to reflect on it; yet it is certain, that the first Exercise of this Faculty, is about particular Ideas. A Man infallibly knows, as foon as ever he has them in his Mind, that the Ideas he calls White and Round, are the very Ideas they are ; and that they are not other Ideas which he calls Red or Square. Nor can any Maxim or Proposition in the World, make him know it clearer or furer than he did before, and without any fuch general Rule. This then is the first Agreement or Dif-

agreement,

because Robbers, and the worst of Men, sometimes make use of them, to take away honest Mens Lives or Goods. And the Reason is, because they were defigned, and will ferve to preferve 'em. And who knows but this may be the present Case? If your Lordship thinks, that placing of Certainty in the Perception of the Agreement or Difagreement of Ideas, be to be rejected as falle, because you apprehend it may be of dangerous Consequence to that Article of Faith; on the other side, perhaps others, with me, may think it a Defence against Error, and so (as being of good use) to be received and adhered to.

I would not, my Lord, be hereby thought to fet up my own, or any ones Judgment against your Lordship's. But I have said this only to show, while the Argument lies for or against the Truth of any Proposition barely in an Imagination, that it mey be of Confequence to the supporting or overthrowing of any remote Truth; it will be impossible, that way, to determine of the Truth or Falshood of that Proposition. For Imagination will be fet up against Imagination, and the stronger probably will be against your Lordship; the strongest Imaginations being usually in the weakest Heads. The only way, in this Case, to put it past doubt, is to shew the Inconsistency of the two Propositions; and then it will be seen, that one overthrows the other; the true, the face one.

Your Lordship fays indeed, This is a new M. Sal of Certainty. I will not fay fo my felt, for fear of deferving a focund a proof from your Lordthip, for being 100 forward to assume to my felf the Harner of being an Original. But this, I think, gives me occasion, and will excuse me from being thought impertinant. If I affe your Lord's p, whether there be any other, or older Nutbod of Cantainty? And w. achi.? For if there be no other, nor older than this, ci her this was always the Method of Certainty, and so mine is no mere one; or else the Weild is colleged to me for agreement, which the Mind perceives in its *Ideas*; which it always perceives at first Sight: And if there ever happen any doubt about it, 'twill always be found to be about the Names, and not the *Ideas* themselves, whose Identity and Diversity will always be perceived, as soon and as clearly as the *Ideas* themselves are; nor can it possibly be otherwise.

Secondly, The next fort of Agreement, or Disagreement, the Mind perceives in any of its Ideas, may, I think, be called Relative, and is nothing, but the Perception of the Relation between any two Ideas, of what kind soever, whether Substances, Modes, or any other. For fince all distinct Ideas must eternally be known not to be the same, and so be universally and constantly denied one of another, there could be no room for any positive Knowledge at all, if we could not perceive any Relation between our Ideas, and find out the Agree-

ment

this new one, after having been so long in the want of so necessary a thing, as a Method of Certainty. It there be an older, I am sure your Lordship cannot but know it; your condemning mine as new, as well as your thorough Insight into Antiquity, cannot but satisfy every Body that you do. And therefore to set the World right, in a thing of that great Concernment, and to overthrow mine, and thereby prevent the dangerous Consequence there is in my having unseasonably started it, will not, I humbly conceive, misbecome your Lordship's Care of that Article you have endanced to desend, nor the good Will you bear to Truth in general. For I will be answerable for my self, that I shall; and I think I may be for all others, that they all will give off the placing of Certainty in the Perception of the Agreement or Disagreement of Ideas, if your Lordship will be pleased to show, that it lies in any thing else.

But truly, not to ascribe to my self an Invention of what has been as old as Knowledge is in the World, I must own I am not guilty of what your Lordship is pleased to call starting new Methods of Certainty. Knowledge, ever since there has been any in the World, has consisted in one particular Action of the Mind; and so, I conceive, will continue to do to the end of it. And to start new Methods of Knowledge, or Certainty, (for they are to me the same thing) i. e. to find out and propose new Methods of attaining new Knowledge, either with more Ease and Quickness, or in things yet unknown, is what I think no Body could blame: But this is not that which your Lordship here means, by new Methods of Certainty. Your Lordship, I think, means by it, the placing of Certainty in something, wherein either it does not consist, or else wherein it was not placed before now; if this were to be called a new Method of Certainty. As to the latter of these, I shall know whether I am guilty or no, when your

ment or Disagreement they have one with another, in several ways the Mind takes of comparing 'em.

§. 6. Thirdly, The third fort of Agreement or Disagreement to be found in our *Ideas*, which the Descention of the Mind is employed about

Thirdly, Of Co-existence.

the Perception of the Mind is employ'd about, is Co-existence, or Non-co-existence, in the same Subject; and this belongs particularly to Substances. Thus when we pronounce concerning Gold, that it is fixed, our Knowledge of this Truth amounts to no more but this, that Fixedness, or a Power to remain in the Fire unconsumed, is an Idea that always accompanies, and is joined with that particular fort of Yellowness, Weight, Fusibility, Malleableness, and Solubility in Aq. Regia, which make our complex Idea signified by the Word Gold.

9. 7.

Lordship will do me the Favour to tell me, wherein it was placed before: which your Lordship knows I professed my self ignorant of, when I writ my Book, and so I am still. But if starting of new Methods of Certainty, be the placing of Certainty in something wherein it does not consist; whether I have done that or no, I must appeal to the Experience of Mankind.

There are feveral Actions of Mens Minds, that they are conscious to themselves of performing, as willing, believing, knowing, &c. which they have so particular sense of, that they can distinguish em one from another; or else they could not say, when they avilled, when they believed, and when they knew any thing. But tho' these Actions were different chough from one another, not to be consounded by those who spoke of 'em, yet no Body that I had met with, had, in their Writings, particularly set

down wherein the Act of Knowing precisely confisted.

To this Reflection, upon the Actions of my own Mind, the Subject of my Estay concerning Human Understanding naturally led me; wherein, it I have done any thing new, it has been to describe to others, more particularly than had been done before, what it is their Minds do, when they perform that Action which they call Knowing; and if, upon Examination, they observe I have given a true Account of that Action of their Minds in all the Parts of it; I suppose it will be in vain to dispute against what they find and feel in themselves. And if I have not told them right and exactly what they find and feel in themselves, when their Minds perform the Act of knowing, what I have said will be all in vain; Men will not be persuaded against their Senses. Knowledge is an internal Perception of their Minds; and if, when they reflect on it, they find it is not what I have said it is, my Groundless Conceit will not be hearken'd to, but be exploded by every Body, and die of it self: And no Body need to be at any Pains to drive it cut of the World. So impossible is it to find out. Or

Furthly, Of real Existence.

6. 7. Fourthly, The fourth and last fort is, that of actual real Existence agreeing to any Idea. Within these four sorts of Agreement or Disagreement, is, I suppose, contained all the Knowledge we have, or are capable of: For all the Enquiries that we can make concerning any of our Ideas, all that we know or can affirm concerning any of 'em, is, That it is, or is not the same with some other; that it does, or does not always co-exist with some other Idea in the same Subject; that it has this or that Relation to some other Idea; or that it has a real Existence without the Mind. Thus Blue is not Yellow, is of Identity, Two Triangles upon equal Basis, between two Parallels are equal,

start new Methods of Certainty, or to have 'em received, if any one places it in any thing, but in that wherein it really confists: Much less can any one be in danger to be missed into Error, by any such new, and to every one visibly scribes Project. Can it be supposed, that any one could flart a new Method of Secing, and persuade Men thereby, that they do not see what they do see? Is it to be seared, That any one can call such a Miss over their Eyes, that they should not know when they see, and so be led out of

their way by it?

Knowledge, I find in my felt, and I conceive in others, confifts in the Perception of the Agreement or Disagreement of the immediate Objects of the Mind in Thinking, which I call Ideas: But whether it does fo in others or no, must be determined by their own Experience, reflecting upon the Assion of their Mind in knowing; for that I cannot alter, nor I think they themf lyes. But whether they will call those immediate Ob. jects of their Minds in thinking, Ideas or no, is perfectly in their own Choice. If they distilke that Name, they may call 'em Notions or Concattions, or how they please, it matters not, if they use them so as to avoid Obscurity and Consulton. If they are constantly used in the same and a known Senfe, every one has the Liberty to pleafe himself in his Terms, there lies neither Truth, nor Error, nor Science, in that; the' those that take 'em for Things, and not for what they are, bare arbitrary Signs of our Illas, make a great deal of Do often about 'em; as if some great Matter lay in the use of this or that Sound All that I know, or can imagine, of Difference about 'cm, is, that those Words are always best. whole Significations are best known in the Sense they are used; and so are least apt to breed Contagion.

My ford, your Lordship has been pleased to find fault with my use of the new Tern Islan, without telling me a better Name for the immediate Objects of the Mind in thinking. Your Lordship also has been pleased to find fault with my Definition of Knowledge, without doing methe layour to give me a better. For it is only about my Definition of Knowledge,

equal, is of Relation: Iron is susceptible of magnetical Impressions, is of Co-existence: GOD is, is of real Existence. Tho' Identity and Co-existence are truly nothing but Relations, yet they are so peculiar ways of Agreement or Disagreement of our Ideas, that they deserve well to be considered as distinct Heads, and not under Relation in general; since they are so different Grounds of Affirmation and Negation, as will easily appear to any one who will but restect on what is said in several Places of this Essay. I should now proceed to examine the several Degrees of our Knowledge, but that it is necessary first to consider the different Acceptations of the Word Knowledge.

§. 8. There are feveral ways wherein the Mind is possessed of Truth; each of which is called *Knowledge*.

Knowledge, astual or habitual.

1. There

Knowledge, that all this Stir concerning Certainty is made. For with me, to know and be certain, is the fame thing; what I know, that I am certain of; and what I am certain of, that I know. What reaches to Knowledge, I think may be called Certainty; and what comes fhort of Certainty, I think cannot be called Knowledge; as your Lordship could not but observe in the 18th Section of Chap. 4. of my 4th Book, which you have quoted.

My Definition of Knowledge stands thus: Knowledge seems to me, to be nothing but the Perception of the Connexion and degreement, or Disagreement and Repugnancy of any of our Ideas. This Definition your Lordship dishes, and apprehends it may be of dangerous Consequence as to that Article of Christian Faith, which your Lordship has endeavoured to defend. For this there is a very easy Remedy: It is but for your Lordship to set aside this Definition of Knowledge, by giving us a better, and this Danger is over. But your Lordship seems rather to have a Controversy with my Book, for having it in it, and to put me upon the Desence of it; for which I must acknowledge my self obliged to your Lordship for affording me so much of your Time, and for allowing me the Honour of conversing so much with one so far above me in all Respects.

Your Lordhip tays. It may be of dangerous Confequence to that Article of Christian Faith, which you have endrawoured to defend. The the Laws of Disputing allow bare Denial as a sufficient Answer to Sayings, without any offer of a Proof; yet, my Lord, to shew how willing I am to give your Lordship all Satisfaction, in what you apprehend may be of dangerous Confequence in my Book, as to that Article, I shall not stand still sullenly, and put your Lordship upon the Difficulty of shewing wherein that Danger lies; but shall, on the other side, endeavour to shew your Lordship that that Desinition of mine, whether true or salse, right or wrong, can

1. There is actual Knowledge, which is the present View the Mind has of the Agreement or Disagreement of any of its Ideas, or of the Relation they have one to another.

2. A Man is faid to know any Proposition, which having been once laid before his Thoughts, he evidently perceived the Agreement or Disagreement of the Ideas whereof it confists: and fo lodg'd it in his Memory, that whenever that Proposition comes again to be reflected on, he, without doubt or hefitation, embraces the right fide, affents to, and is certain of the Truth of it. This, I think, one may call habitual Knowledge: And thus a Man may be faid to know all those Truths which are lodged in his Memory, by a foregoing clear and full Perception, whereof the Mind is affured past doubt, as often as it has Occasion to reflect on them. For our finite Understandings being able to think clearly and distinctly, but on one thing at once, if Men had no Knowledge of any more than what they actually thought on, they would all be very ignorant: And he that knew most, would know but one Truth, that being all he was able to think on at one time. J. 9.

be of its dangerous Consequence to that Article of Faith. The Reason which I shall offer for it, is this: Because it can be of no Consequence to it at all.

That which your Lordship is attaid it may be dangerous to, is an Article of Faith: That which your Lordship labours and is concerned for, is the Certainty of Faith. Now, my Lord, I humbly conceive the Certainty of Faith, if your Lordship thinks sit to call it so, has nothing to do with the Certainty of Knowledge. And to talk of the Certainty of Faith, seems all one to me, as to talk of the Knowledge of Believing, a way of speaking not easy to me to understand.

Place Knowledge in what you will, flart what new Methods of Certainty you please, that are apt to leave Mens Minds more doubtful than before: Place Certainty on such Grounds as will leave little or no Knowledge in the World. For these are the Arguments your Lordship uses against my Definition of Knowledge; this shakes not at all, nor in the least concerns the Assurance of Faith; this is quite distinct from it, neither stands nor

falls with Knowledge.

Faith stands by it self, and upon Grounds of its own; nor can be removed from them, and placed on those of Knowledge. Their Grounds are so far from being the same, or having any common, that when it is brought to Certainty, Faith is destroyed; its Knowledge then, and Faith

no longer.

With what Assurance soever of Believing, I assent to any Article of Faith, so that I stedsastly venture my All upon it, it is still but Believing. Bring it to Certainty, and it ceases to be Faith. I believe that Jesus Christ was cracined, dead, and buried, rose again the third Day from the Dead, and ascended into Heaven: Let now fach Methods of Knowledge or Cer-

teinty

9. 9. Of habitual Knowledge, there are also,

vulgarly speaking, two Degrees:
First, 'The one is of such Truths laid up in
the Memory, as whenever they occur to the Mind
it actually perceives the Relation is between those le

Habitual Knowledge twofold.

it actually perceives the Relation is between those Ideas. And this is in all those Truths, whereof we have an inuitive Khoweledge, where the Ideas themselves, by an immediate View, discover their Agreement or Disagreement one with another.

Secondly, The other is of fuch Truths, whereof the Mand having been convinced, it retains the Memory of the Conviction, without the Proofs. Thus a Man that remembers certainly, that he once perceived the Demonthration that the three Angles of a Triangle are equal to two right ones, is certain that he knows it, because he cannot doubt of the Truth of it. In his adherence to a Truth, where the Demonstration, by which it was at first known, is forgot, tho' a Man may be thought rather to believe his Memory, than really to know, and this way of entertaining a Truth feemed formerly to me like fomething betweenOpinion and Knowledge, a fort of Assurance which exceeds bare Belief, for that relies on the Tellimony of another; Yet upon a due Examination, I find it comes not short of perfect Certainty, and is in effect true Knowledge. I hat which is apt to missead our first Thoughts into a mistake in this Matter is, that the Agreement or Difagreement of the Ideas in this Cafe is

tainty be flarted, as leave Mens Minds more doubtful than before: Let the Grounds of Knowledge be resolved into what any one pleases, it touches not my Faitb; the Foundation of that stands as sure as before, and cannot be at all shaken by it; and one may as well say, That any thing that weakens the Sight, or casts a Mist before the Eyes, endangers the Hearing; as that any thing which alters the Nature of Knowledge (if that could be done) should be of dangerous Consequence to an Article of Faitb.

Whether then I am or I am not mistaken, in the placing Certainty in the Perception of the Agreement or Disagreement of Lieas; whether this Account of Knowledge be true or false, enlarges or straitens the Bounds of it more than it should; Faith still stands upon its own Bass, which is not at all altered by it; and every Article of that has just the same unmoved Foundation, and the very same Credibility, that it had before. So that, my Lord, whatever I have said about Certainty, and how much sover I may be out in it, if I am missaken, your Lordship has no Reason to apprehend any Danger to any xirticle of Faith, from thence; every one of them stands upon the same Bottom it did before, out of the Reach of what belongs to Knowledge and Certainty. And thus much of my way of Certainty by Ideas; which I hope, will satisfy your Lordship how far it is from being dangerous to any Article of the Christian Faith whatsoever.

not perceived, as it was at first, by an actual view of all the intermediate Ideas, whereby the Agreement or Disagreement of those in the Proposition was at first perceived; but by other intermediate Ideas, that shew the Agreement or Disagreement of the Ideas contained in the Proposition whose Certainty we remember. For Example, in this Proposition, that the three Angles of a Triangle are equal to two right ones, one who has feen and clearly perceived the Demonstration of this Truth, knows it to be true, when that Demonstration is gone out of his Mind; fo that at prefent it is not actually in view, and possibly cannot be recollected: But he knows it in a different way from what he did before. The Agreement of the two Ideas joined in that Proposition is perceived, but it is by the Intervention of other Ideas than those which at first produced that Perception. He remembers, i.e. he knows (for Remembrance is but the reviving of some past Knowledge) that he was once certain of the Truth of this Proposition, that the three Angles of a Triangle are equal to two right ones. The Immutability of the same Relations between the same immutable Things, is now the Idea that shews him, that if the three Angles of a Triangle were once equal to two right ones, they will always be equal to two right And hence he comes to be certain that what was once true in the case is always true; what Ideas once agreed will always agree: and confequently what he once knew to be true he will always know to be true, as long as he can remember that he once knew it. Upon this ground it is, that particular Demonftrations in Mathematicks afford general Knowledge. If then the Perception that the same Ideas will eternally have the same Habitudes and Relations be not a sufficient ground of Knowledge, there could be no Knowledge of general Propositions in Mathematicks; for no Mathematical Demonstration would be any other than particular: And when a Man had demonfrated any Proposition concerning one Triangle or Circle, his Knowledge would not reach beyond that particular Diagram. If he would extend it farther he must renew his Demonfration in another Inflance, before he could know it to be true in another like Triangle, and fo on: By which means one could never come to the Knowledge of any general Propofiti-No body, I think, can deny that Mr. Newton certainly knows any Proposition, that he now at any time reads in his Book, to be true, tho' he has not in actual View that admirable Chain of intermediate Ideas, whereby he at first discovered it to be true. Such a Memory as that, able to retain fuch a Train of Particulars, may be well thought beyond the reach of Humane Faculties; when the very Discovery, Perception, and laying together that wonderful Connection of *Ideas* is found to surpass most Readers Comprehension. But yet 'tis evident, the Author himself knows the Proposition to be true, remembring he once saw the Connection of those *Ideas* as certainly as he knows such a Man wounded another, remembring that he saw him run him through. But because the Memory is not always so clear as actual Perception, and does in all Men more or less decay in length of time, this amongst other Differences is one, which shews, that demonstrative Knowledge is much more impersect than intuitive, as we shall see in the following Chapter.

CHAP. II.

Of the Degrees of our Knowledge.

LL our Knowledge consisting, as I have Intuitive. faid, in the View the Mind has of its own Ideas, which is the utmost Light and greatest Certainty, we with our Faculties, and in our way of Knowledge, are capable of, it may not be amiss, to consider a little the Degrees of its Evidence. The different clearness of our Knowledge feems to me to lie in the different Way of Perception the Mind has of the Agreement or Disagreement of any of its Ideas. For if we will reflect on our own Ways of Thinking, we shall find, that sometimes the Mind perceives the Agreement or Disagreement of two Ideas immediately by themselves, without the intervention of any other: And this, I think, we may call intuitive Knowledge. For in this, the Mind is at no Pains of proving or examining, but perceives the Truth, as the Eye doth Light, only by being directed toward it. Thus the Mind perceives, that White is not Black, that a Circle is not a Triangle, that Three are more than Two, and equal to One and Two. Such kind of Truths the Mind perceives at the first sight of the Ideas together, by bare Intuition, without the Intervention of any other Idea; and this kind of Knowledge is the clearest, and most certain, that humane Frailty is capable of. This part of Knowledge is irrefistible, and like bright Sunshine, forces it self immediately to be perceived, as soon as ever the Mind turns its View that Way; and leaves no room for Hesitation, Doubt, or Examination, but the Mind is presently filled with the clear Light of it. 'Tis on this Intuition, that depends all the Certainty and Evidence of all our Knowledge, which Certainty every one finds to be so great, that he cannot imagine, and therefore not require a greater: For a Man cannot Кı

conceive himself capable of a greater Certainty, than to know that any *Idea* in his Mind is such as he perceives it to be; and that tree *Ideas*, wherein he perceives a difference, are different, and not precisely the same. He that demands a greater Certainty than this, demands he knows not what, and shews only that he has a mind to be a Sceptick, without being able to be so. Certainty depends so wholly on this Intuition, that in the next Degree of *Knowledge*, which I call *Demonstrative*, this Intuition is necessary in all the Connections of the intermediate *Ideas*, without which we cannot attain Knowledge and Certainty.

§.2. The next Degree of Knowledge is, where

the Mind perceives the Agreement or Disagree-Demonstrative. ment of any Ideas, but not immediately. Tho' wherever the Mind perceives the Agreement or Disagreement of any of its Ideas, there be certain Knowledge; yet it does not always happen that the Mind fees that Agreement or Difagreement, which there is between 'em, even where it is discoverable; and in that case remains in Ignorance, and at most, gets no farther than a probable Conjecture. The Reason why the Mind cannot always perceive presently the Agreement or Difference of two Ideas is, because those Ideas concerning whose Agreement or Disagreement the Enquiry is made, cannot by the Mind be so put together, as to shew it. In this case then, when the Mind cannot fo bring its Ideas together, as by their immediate Comparison, and as it were Juxta-position, or Application one to another, to perceive their Agreement or Difagreement, it is fain, by the Intervention of other Ideas (one or more, as it happens) to discover the Agreement or Disagreement, which it fearches: and this is that which we call Reasoning. Thus the Mind being willing to know the Agreement or Disagreement in bigness, between the three Angles of a Triangle, and two right ones, cannot by an immediate View and comparing them, do it: Because the three Angles of a Triangle cannot be brought at once, and be compared with any one or two Angles; and so of this the Mind has no immediate, no intuitive Knowledge. In this Case the Mind is fain to find out some other Angles, to which the three Angles of a Triangle have an Equality; and finding those equal to two right ones, comes to know their Equality to two right ones.

Defends on Proofs: Those intervening Ideas, which ferve to show the Agreement of any two others, are called Proofs; and where the Agreement or Disagreement is by this means plainly and clearly perceived, it is called Demonstration, it being freconto the Understanding, and the Mind

made

made fee that it is so. A quickness in the Mind to find out these intermediate *Ideas*, (that shall discover the Agreement or Disagreement of any other) and to apply 'em right, is, 1

suppose, that which is called Sagacity.

§. 4. This Knowledge by intervening Proofs, tho' it be certain, yet the Evidence of it is not altogether so clear and bright, nor the Assent for ready, as in intuitive Knowledge. For tho' in Demonstration, the Mind does at last perceive the Agreement or Disagreement of the Ideas it considers: yet 'tis not without Pains and Attention: There must be more than one transfert View to find it. A steady Application and Pursuit is required to this Discovery: And there must be a Progression by Steps and Degrees, before the Mind can in this Way arrive at Certainty, and come to perceive the Agreement or Repugnancy between two Ideas that need Proofs and the Use of Reason to show it.

§. 5. Another difference between intuitive and demonstrative Knowledge, is, that the in the latter all Doubt be removed, when by the Intervention of the intermediate Ideas the Agree-

Not swithout precedent Doubt,

ment or Disagreement is perceived; yet before the Demonfiration there was a Doubt which in intuitive Knowledge cannot happen to the Mind that has its Faculty of Perception lest to a Degree capable of distinct Ideas, no more than it can be a doubt to the Eye, (that can distinctly see White and Black) whether this Ink and this Paper be all of a Colour. If there be Sight in the Eyes, it will at first glimpse, without Hestation, perceive the Words printed on this Paper, different from the Colour of the Paper: And so if the Mind have the Faculty of distinct Perception, it will perceive the Agreement or Disagreement of those Ideas that produce intuitive Knowledge. It the Eyes have lost the Faculty of seeing, or the Mind of perceiving, we in vain inquire after the quickness of Sight in one, or clearness of Perception in the other.

6.6. Tistrue, the Perception produced by Demonstration is also very clear; yet it is often with a great Abatement of that evident Lustre and full Atturance, that always accompany that which I call i tuitive, like a Face reflected by several Mirrors one to another, where as long as it retains the Similitude and Agreement with the Object, it produces a Knowledge; but its till in every shall live Less evidences, which is in the first, till at last, after many seconders, it has a great mixture of Dinness, and is not at first light to be, we

able, especially to weak Eyes. Thus it is with Knowledge, made out by a long Train of Proofs.

Lach Step must have intuitive Ewidence.

6. 7. Now, in every step Reason makes in demonstrative Knowledge, there is an intuitive Knowledge of that Agreement or Disagreement, it feeks with the next intermediate Idea, which

it uses as a Proof: For if it were not so, that yet would need a Proof. Since without the Perception of fuch Agreement or Difagreement there is no Knowledge produc'd: If it be perceived by it felf, it is intuitive Knowledge: If it cannot be perceived by it felf, there is need of some intervening Idea, as a common Measure to shew their Agreement or Disagreement. By which it is plain, that every step in Reasoning, that produces Knowledge, has intuitive Certainty; which when the Mind perceives, there is no more required, but to remember it, to make the Agreement or Disagreement of the Ideas, concerning which we inquire, visible and certain. So that to make any thing a Demonstration, it is necessary to perceive the immediate Agreement of the intervening Ideas, whereby the Agreement or Difagreement of the two Ideas under Examination (whereof the one is always the first, and the other the last, in the Account) is found. This intuitive Perception of the Agreement or Difagreement of the intermediate Ideas, in each Step and Progression of the Demonstration, must also be carried exactly in the Mind, and a Man must be sure that no part is lest out; which because in long Deductions, and the use of many Proofs, the Memory does not always fo readily and exactly retain: therefore it comes to pass, that this is more imperfect than intuitive Knowledge, and Men embrace often Falshood for Demonstrations.

Hence the mistake, ex præcognitis & præconcellis.

§. 8. The Necessity of this intuitive Knowledge, in each step of scientifical or demonstrative Reasoning, gave occasion, I imagine, to that mistaken Axiom, that all Reasoning was ex pracognitis & praconcessis: which how far it is

mistaken, I shall have Occasion to shew more at large, where I come to confider Propositions, and particularly those Propositions which are called Maxims; and to shew that 'tis by a Mistake, that they are supposed to be the Foundations of all

our Knowledge and Reasonings.

Demonstration not limited to Quantity.

6. 9. It has been generally taken for granted, that Mathematicks alone are capable of demonstrative Certainty: But to have such an Agreement or Disagreement, as may intuitively be perceived, being, as I imagine, not the Privilege of the Ideas of Number, Extension, and Figure alone, it may possibly be the want of due Method and Application in us, and not of sufficient Evidence in Things, that Demonstration has been thought to have so little to do in other parts of Knowledge, and been scarce so much as aimed at by any but Mathematicians. For whatever Ideas we have, wherein the Mind can perceive the immediate Agreement or Disagreement that is between 'em, there the Mind is capable of intuitive Knowledge; and where it can perceive the Agreement or Disagreement of any two Ideas, by an intuitive Perception of the Agreement or Disagreement they have with any intermediate Ideas, there the Mind is capable of Demonstration, which is not limited to Ideas of Extension, Figure, Number, and their Modes.

§. 10. The Reason why it has been generally sought for, and supposed to be only in those, I imagine has been, not only the general usefulness of those Sciences; but because, in comparing

Why it has been so thought.

their Equality or Excess, the Modes of Numbers have every the least difference very clear and perceivable: and tho' in Extension, every the least Excess is not so perceptible; yet the Mind has found out Ways, to examine and discover demonstratively the just Equality of two Angles, or Extensions, or Figures, and both these, i.e. Numbers and Figures, can be set down by visible and lasting Marks, wherein the *Ideas* under Consideration are perfectly determined, which for the most part they are not, where they are marked only by Names and Words.

6.11. But in other simple Ideas, whose Modes and Differences are made, and counted by Degrees, and not Quantity, we have not so nice and accurate a Distinction of their differences, as to perceive or find Ways to measure their just Equality of the least Differences. For those other simple Ideas, being Appearances or Sensations, produced in us, by the Size, Figure, Number and Motion of minute Corpufeles fingly infenfible, their different degrees also depend upon the Variation of some or all of those Causes; which fince it cannot be observed by us in Particles of Matter, whereof each is too fubile to be perceived, it is impossible for us to have any exact Measures of the disferent degrees of these simple Ideas. For supposing the Sensation or Idea we name Whiteness, be produced in us by a certain Number of Globules, which having their Verticity about the'r own Centers, frike upon the Reting of the Eye, with a certain degree of Rotation, as well as progressive Swiftness; it will hence easily follow, that the more the superficial Parts of any

Body are fo ordered, as to reflect the greater Number of Globules of Light, and to give them that proper Rotation, which is fit to produce this Senfation of White in us, the more White will that Body appear, that from an equal space sends to the Retina the greater number of fuch Corpufcles, with that peculiar fort of Motion. I do not fay, that the Nature of Light confilts in very small round Globules, nor of Whiteness, in such a texture of Parts as gives a certain Rotation to these Globules, when it reflects them; for I am not now treating Physically of Light or Colours: But this, I think, I may fay, That I cannot (and I would be glad anyonewouldmakeintelligible that hedid) conceive how Bodies without us can any ways affect our Senses, but by the immediate contact of the sensible Bodies themselves, as in Tailing and Feeling, or the impulse of some infensible Particles coming from them, as in Seeing, Hearing, and Smelling; by the different impulse of which Parts, caused by their different Size, Figure, and Motion, the variety of Senfations is produced inus.

6.12. Whether then they be Globules, or no; or whether they have a Verticity about their own Centers, that produce the Idea of Whiteness in us, this is certain, that the more Particles of Light are reflected from a Body, fitted to give 'em that peculiar Motion, which produces the Senfation of Whiteness in us; and puffibly too, the quicker that peculiar Motion is, the whiter does the Body appear, from which the greater number are reflected, as is evident in the same piece of Paper put in the Sun-beams, in the Shade, and in a dark Hole; in each of which, it will produce in us the Idea of Whiteness insardifferent degrees.

§. 13. Not knowing therefore what Number of Why it has Farticles, ner what Motion of them is fit to probeen jo thought.

duce any precise degree of Whiteness, we cannot demonstrate the certain Equality of any two degrees of Whiteness, because we have no certain Standard to measure them by, nor means to dislinguish every the least real difference, the only Help we have being from our Senses, which in this point fail us. But where the Difference is so great, as to produce in the Mind clearly diffinet Ideas, whose Differences can be perfectly retained, there these Ideas of Colours, as we see in different kinds, as Blue and Red, are as capable of Demonstration, as Ideas of Number and Extension. What I have here faid of Whiteness and Colours, I think, holds true in all floondary Qualities, and their Modes.

Senfinos Knowled , of particular

§. 14. These two, (viz.) Intuition and Demonfiration, are the degrees of our Knowledge; whatever comes short of one of these, with what assu-

rance

rance soever embraced, is but Faith, or Opinion, Existence. but not Knowledge, at least in all general Truths. There is indeed, another Perception of the Mind, employ'd about the particular Existence of finite Beings without us; which going beyond bare Probability and yet not reaching perfeetly to either of the foregoing degrees of Certainty, passes under the Name of Knowledge. There can be nothing more certain, than that the Idea we receive from an external Object is in our Minds; this is intuitive Knowledge. But whether there be any thing more than barely that Idea in our Minds. whether we can thence certainly infer the Existence of any thing without us, which corresponds to that Idea, is that, whereof fome Men think there may be a Question made, because Men may have fuch *Ideas* in their Minds, when no fuch thing exists. no fuch Object affects their Senses. But yet here, I think, we are provided with an Evidence, that puts us past doubting: For I ask any one, Whether he be not invincibly conscious to himself of a different Perception, when he looks on the Sun by Day, and thinks on it by Night; when he actually taftes Wormwood, or fmells a Rofe, or only thinks on that Savour, or Odour? We as plainly find the Difference there is between any Idea reviv'd in our Minds by our own Memory, and actually coming into our Minds by our Senses, as we do between any two distinct Ideas. If any one say a Dream may do the same thing, and all these Ideas may be produced in us without any external Objects, he may please to dream that I make him this Answer: 1. That 'tis no great matter, whether I remove his Scruple, or no: Where all is but Dream, Reasoning and Arguments are of no use; Truth and Knowledge nothing. 2. That I believe he will allow a very manifest Difference between dreaming of being in the Fire, and being actually in it. But yet if he be resolved to appear so sceptical, as to maintain, that what I call being actually in the Fire is nothing but a Dream; and that we cannot thereby certainly know, that any fuch thing as Fire actually exists without us: I answer, That we certainly finding that Pleasure or Pain follows upon the Application of certain Objects to us, whose Existence we perceive, or dream that we perceive, by our Senfes: This Certainty is as great as our Happiness or Misery, beyond which, we have no concernment to know, or to be. So that, I think, we may add to the two former forts of Knowledge, this also, of the Existence of particular external Objects, by that Perception and Consciousness we have of the actual entrance of Ideas from 'em. and allow these three Degrees of Knowledge, viz. Intuitive, Demonstrative, Demonstrative, and Sensitive: In each of which, there are different Degrees and Ways of Evidence and Certainty.

Knowledge not alruays clear, rubere the Ideas are fo.

6. 15. But fince our Knowledge is founded on, and employ'd about our Ideas only, will it not follow from thence, that it is conformable to our Ideas; and that where our Ideas are clear and distinct, or obscure and confused, our Know-

ledge will be fo too? To which I answer, No: For our Knowledge confisting in the Perception of the Agreement or Difagreement of any two Ideas, its Clearness or Obscurity, confifts in the Clearness or Obscurity of that Perception, and not in the Clearness or Obscurity of the Ideas themselves: v. g. a Man that has as clear Ideas of the Angles of a Triangle, and of Equality to two right ones, as any Mathemarician in the World, may yet have but a very obscure Perception of their Agreement, and so have but a very obscure Knowledge of it. But Ideas which by Reason of their Obfcurity or otherwise, are confused, cannot produce any clear or diffinct Knowledge; because as far as any Ideas are contused, so far the Mind cannot perceive clearly, whether they agree or difagree. Or to express the same Thing in a Way less apt to be misunderstood. He that hath not determined the Ideas to the Words he uses, cannot make Propositions of them, of whose Truth he can be certain.

CHAP III.

Of the Extent of Humane Knowledge.

6. 1. Nowledge, as has been faid, lying in the Perception of the Agreement or Disagreement of any of our Ideas, it follows from hence, That,

Firf. No farther than ave bave Ideas.

Secondly, No farther than nue can perceive their Agreement or Difagreement.

First, We can have Knowledge no farther than we have Ideas.

§. 2. Secondly, That we can have no Knowledge farther than we can have Perception of that Agreement, or Disagreement: Which Perception being, 1. Either by Intuition, or the immediate comparing any two Ideas; or, 2. By Reason, examining the Agreement or Disagreement of two Ideas, by the Intervention of some others: Oc, 3. By Scnfation, perceiving the

Existence of particular Things. Hence it also follows,

9. 3.

6. 3. Thirdly, That we cannot have an intuitive Knowledge, that shall extend it self to all our Ideas, and all that we would know about them; because we cannot examine and perceive all the Relations they have one to another by Juxta-position, or an immediate Comparison one with another. Thus having

Thirdly, Intuitive Knowledge extends it self not to all the Relations of all our Ideas.

the Ideas of an obtuse and an acute angled Triangle, both drawn from equal Bases, and between Parallels, I can, by intuitive Knowledge perceive the one not to be the other; but cannot that way know, whether they be equal or no; because their Agreement or Disagreement in Equality, can never be perceived by an immediate comparing them: The difference of Figure makes their Parts uncapable of an exact immediate Application; and therefore there is need of fome intervening Quantities to measure them by, which is Demonstration, or rational Knowledge.

6. 4. Fourthly, It follows also, from what is above observed, that our rational Knowledge cannot reach to the whole extent of our Ideas: Because between two different Ideas we would

Fourthly, Nor demonstrative Knowledge.

examine, we cannot always find fuch Mediums, as we can connect one to another with an intuitive Knowledge, in all the Parts of the Deduction; and wherever that fails, we come short of Knowledge and Demonstration.

6. 5. Fifthly, Sensative Knowledge, reaching no farther than the Existence of Things actually prefent to our Senses, is yet much narrower than either of the former.

Fifthly, Sensitive Knowledge narrower than either.

6. 6. From all which it is evident, that the Extent of our Knowledge comes not only short of the Reality of Things, but even of the Extent of our own Ideas. Tho' our Knowledge be limited to our Ideas, and cannot exceed them either in Extent or Perfection; and tho' thefe

Sixthly, Our Knowledzetherefore narrower than our Ideas.

be very narrow Bounds, in respect of the extent of All Being, and far fhort of what we may justly imagine to be in some even created Understandings, not tied down to the dull and narrow Information, is to be receiv'd from fome few, and not very acute ways of Perception, fuch as are our Senfes; yet it would be well with us, if our Knowledge were but as large as our Ideas, and there were not many Doubts and Enquiries concerning the Ideas we have, whereof we are not, nor I believe ever shall be in this World, resolved. Nevertheless, I

do not question, but that Humane Knowledge, under the present Circumstances of our Beings and Constitutions may be carried much farther, than it hitherto has been, if Men would fincerely, and with Freedom of Mind, employ all that Industry and Labour of Thought, in improving the means of discovering Truth, which they do for the Colouring or Support of Falshood, to maintain a System, Interest or Party, they are once engaged in. But yet after all, I think I may, without Injury to Humane Perfection, be confident, that our Knowledge would never reach to all we might defire to know concerning those Ideas we have: nor be able to furmount all the Difficulties, and refolve all the Questions, might arise concerning any of them. We have the Ideas of a Square, a Circle, and Equality; and yet, perhaps, shall never be able to find a Circle equal to a Square, and certainly know that it is fo. We have the Ideas of Matter and Thinking, * but possibly shall never be able to know, whether any mere material Being thinks,

or

† Essay of "our Notions, it is not much more remote from our Humane Underst. B. 4. "Comprehension to conceive that God can, if he pleases, "superadd to our Idea of Matter a Faculty of Thinking, "than that he should superadd to it another Substance, "with a Faculty of Thinking." Whoever afforts this,

can newer prove a spiritual Substance in us from a Faculty of Thinking; because he cannot know from the Idea of Matter and Thinking, that Matter so disposed cannot think. And he cannot be certain, that God hath not framed the Matter of our Bodies so as to be capable of it.

To which Mr. Locke ‡ answers thus: Here your Lord-flip argues, that upon my Principles it cannot be proved that there is a spiritual Substance in us. To which give Bishop of Worcestler, p. 64, be proved from my Principles, and I think I have done it; and the Proof in my Book stands thus. First, We experiment in our selves Thinking. The Idea of this

Action or Mode of *Thinking*, is inconfident with the Idea of Self-subfilence, and therefore has a necessary Connection, with a Support or Sub-

ject

^{*} Against that Assertion of Mr. Locke, That possibly we shall never be able to know whether any material Beings think or not, &c. The Bishop of Worcester argues thus: If this be true, then for all that we can know by our Ideas of Matter and Thinking, Matter may have a Power of Thinking: And if this hold, then it is impossible to prove a spiritual Substance in us, from the Idea of Thinking: For how can we be assured by our Ideas, that God hath not given such a Power of Thinking, to Matter so disposed as our Bodies are? Especially since it is said, † "That in respect of

jest of Inhesion: The Idea of that Support is what we call Subflance; and so from Thinking experimented in us, we have a Proof of a thinking Substance in us, which in my Sense is a Spirit. Against this your Lordship will argue, That by what I have said of the Possibility that God may, if he pleafed, superadd to Matter a Faculty of Thinking, it can never be proved that there is a spiritual Substance in us, because upon that Supposition it is possible it may be a material Substance that thinks in us. I grant it; but add, that the general Idea of Subitance being the fame every where, the Modification of Thinking, or the Power of Thinking joined to it, make it a Spirit, without confidering what other Modifications it has, as, whether it has the Modification of Solidies, or no. As on the other fide Substance, that has the Modification of Solidity is Matter, whether it has the Modification of thinking or no. And therefore, if your Lordship means by a Spiritual, an immaterial Substance, I grant I have not proved, nor upon my Principles can it be proved, your Lordhip meaning (as I think you do) demonstratively proved, That there is an immaterial Substance in us that thinks. Tho' I presume, from what I have faid about the Supposition of a System B. 4. C. 10. of Matter, Thinking (which there demonstrates that God \ . 16. is immaterial) will prove it in the highest Degree probable, that the thinking Substance in us is immaterial. But your Lordship thinks

not Probability enough, and by charging the want of Demonstration upon my Principles, that the thinking Thing in us is immaterial, your Lordship seems to conclude it demonstrable from Principles of Philosophy, That Demonstration I should with Joy receive from your Lordship, or any one. For tho' all the great Ends of Morality and

Religion are well enough fecured without it, as I have

B. 4. C. 3,

shewn, yet it would be a great Advance of our Knowledge \ 6.

in Nature and Philosophy.

To what I have faid in my Book, to shew that all the great Ends of Religion and Morality are secured barely by the Immortality of the Soul, without a necessary Supposition that the Soul is immaterial. I crave leave to add, That Immortality may and shall be annexed to that, which in its own Nature is neither immaterial nor immortal, as the Apostle expressly declares in these Words, * For this

Corruptible must put on Incorruption, and this Montal

* 1 Cor. 15.53.

must put on Immortality.

Perhaps my using the Word Epicit for a thinking Substance, without excluding Materiality out of it, will be thought too great a I iberty, and such as deserves a Censure, because I leave Immateriality out of the Idea I make it a Sign of. I readily own, that Words should be sparingly ventured on in a Sense wholly new; and nothing but absolute Needility can excuse the Boldness of using any Term, in a Sense whereof we can produce no Example. But in the present Case, I think I have great Authorities to justify me. The Seel is agreed, on all Hands, to be that in us which thinks. And he that will look into the First Book of Cicero's Tusculan Questions, and into the Sixth Book of Virgit's Anids, will find that these two great Men, who of all the Romans best understood Philosophy, thought, or at least did not Liny the Soul to be a subtle Matter.

which

which might come under the Name of Aura, or Ignus, or Æther, and this Soul they both of them called Spiritus; in the Notion of which, 'tis plain they included only Thought and active Motion, without the total Exclusion of Matter. Whether they thought right in this I do not fay, that is not the Question; but whether they spoke properly, when they called an active, thinking, fubtil Substance, out of which they excluded only gross and palpable Matter, Spiritus, Spirit. I think that no Body will deny, That if any among the Romans can be allowed to speak properly, Tully and Virgil are the two who may most fecurely be depended on for it: And one of them speaking of the Soul, says, Dum spiritus hos regit artus; and the other, Vita continetur corpore & spiritu. Where 'tis plain by Corpus, he means (as generally every where) only gross Matter that may be felt and handled, as appears by these Words, Si cor aut sanquis, aut cerebrum est animus, certè, quoniam est Corpus, interibit cum reliquo Corpore, si anima est, fortè dissipabitur, si ignis extinguetur, Tusc. Quest. l. 1. c. 11. Here Cicero opposes Corpus to Ignis and Anima, i. e. Aura or Breath. And the Foundation of that his Distinction of the Soul, from that which he calls Corpus or Body, he gives a little lower in these Words, Tanta ejus tenuitas ut fugiat aciem, Ib. c. 22. Nor was it the Heathen World alone that had this Notion of Spirit; the most enlightned of all the antient People of God, Solomon himself, speaks after the same manner, That which befalleth the Sons of Eccl. 3. 19. Men, befalleth the Beafts, even one thing befalleth'em: as the one dieth fo dieth the other, yea, they have all one Spirit. So I translate the Hebrew Word nin here, for to I find it translated the Ver. 21. very next Verse but one; Who knoweth the Spirit of a Man that goeth upward, and the Spirit of a Beast that goeth down to the Earth. In which Places it is plain that Solomon applies the Word The and our Translators of him the Word Spirit to a Substance, out of waich Immateriality was not wholly excluded, unless the Spirit of a Beast that south dozonwards to the Earth be immaterial. Nor did the way of freaking in our Saviour's Time vary from this: St. Luke Cb. 24. 37. tells us, That when our Saviour, after his Refurrection, flood in the midst of them, they were affrighted, and suppoled they had feen averua, the Greek Word which always answers Spirit in En lift; and to the Translators of the Bible render it here, They fuppol d that they had seen a Spirit. But our Sav our fays to 'em, Behold my Hinds and my Feet, that it is I my felf, handle me and fee; for a Spirit harb no High and Bon-s, as you fee me have, Which Words of our Saviour zu, the same Distinction between Body and Spirit, that Cicero did in the Fig. above-cited. viz. That the one was a gross Compages that could felt and handled; and the other fuch as Virgil describes the Ghost or

Lib. VI. Ter conatus ibi collo dare brachia circum:

Ter frustra comprensa manus essuit imago,
Par levibus ventis volucriq; simillima somno.

coul of Anchifes.

I would not be thought hereby to fay, That Spirit never does fignify a purely immaterial Substance. In that Sense the Scripture, I take it, speaks, when it says, God is a Spirit; and in that Sense I have used it; and in that Sense I have proved from my Principles that there is a spiritual Substance; and am certain that there is a spiritual immaterial Subflance: which is, I humbly conceive, a direct Answer to your Ludsh.p's Question in the Beginning of this Argument, viz How we come to be rertain that there are spiritual Substances, supposing this Principle to be true, at ne fimple Ideas by Senfation and Refl ction, are the fole Matter and Foundation of all our Renfoning? But this hinders not, but arar it God, that infinite, omnipotent, and perfectly immaterial Spirit, shoeth please to give to a System of very subtil Matter, Sense and Motion, it might, Propriety of Speech, be called Spirit, tho' Materiality were not exercise out of its complex Idea. Your Lordship proceeds, It is faid indica elewhere, That it is repugnant to the Idea of fenfless Matter, that it should put into it self Sense, Perception, and Knowledge. B. 4. C. 13. But this doth not reach the present Case; which is not what §. 5. Matter can do of it felf, but aubat Matter prepared by an

omnipotent Hand can do. And what Certainty can we have that he hath not done it? We can have none from the Ideas, for those are given up in this Case, and consequently, we can have no Certainty upon these Principles, whe-

ther we have any spiritual Substance within us or not.

Your Lordship in this Paragraph proves, that I m what I fay, We can have no Certainty whether we have any spiritual Submand in us or not. If by spiritual Substance your Lordship means an immaterial Substance in us, as you speak, p. 246, I grant what your Lordship says is true, That it cannot upon these Principles be demonstrated. But I must crave leave to fay at the same time, That upon these Principles, it can be proved, to the highest degree of Probability. If by spiritual Substance, your Lordship means a thinking Substance, I must diffent from your Lordship, and say, That we can have a Certainty, upon my Principles, that there is a spiritual Substance in us. In short, my Lord, upon my Principles, i. e. from the Idea of Thinking, we can have a Certainty that there is a thinking Substance in us; from hence we have a Certainty that there is an eternal thinking Substance. This thinking Substance, which has been from Eternity, I have proved to be immaterial. This eternal, immaterial, thinking Substance, has put into us a thinking Substance, which whether it be a material or immaterial Subtlance, cannot be infallibly demonstrated from our Ideas; tho' from 'em it may be proved that it is to the highest degree probable that it is immaterial.

Again, the Bishop of Worcester undertakes to prove from Mr. Locke's Principles, that we may be certain, "That the first eternal thinking "Being or omnipotent Spirit cannot, it he would, give to certain Systems "of created sensible Matter, put orgether as no sees sit, some degrees of

" Sente, Perc ption and Thought,"

To which Mr Locke has made the following Answer in his Third Letter, p. 396, 397, &c.

144 Extent of Humane Knowledge.

Your first Argument 1 take to be this, That according to me, the Knowledge we have being by our Ideas, and our Idea of Matter in general being a solid Substance, and our Idea of Body a solid extended figured Substance; if I admit Matter to be capable of Thinking, I consound the Idea of Matter with the Idea of a Spirit: To which I answer, No, no more than I consound the Idea of Matter with the Idea of an Horse, when I say that Matter in general is a solid extended Substance; and that an Horse is a material Animal; or an extended solid Substance with Sense

and fpontaneous Motion. The Idea of Matter is an extended folid Substance; wherever there is fuch a Substance there is Matter; and the Essence of Matter whatever other Qualities, not contained in that Effence, it shall please God to superadd to it. For Example, God creates an extended folid Substance. without the superadding any thing else to it, and so we may consider it at rest; To some parts of it he superadds Motion, but it has still the Essence of Matter: Other parts of it he frames into Plants, with all the Excellencies of Vegetation, Life, and Beauty, which is to be found in a Rose or a Peach-Tree, &c. above the Essence of Matter in general, but it is still but Matter: To other Parts he adds Sense and spontaneous Motion, and those other Properties that are to be found in an Elephant. Hitherto 'tis not doubted but the Power of God may go, and that the Properties of a Rose, a Peach, or an Elephant, superadded to Matter, change not the Properties of Matter; but Matter is in these Things Matter still. But if one venture to go one Step farther and fay, God may give to Matter, Thought, Reason, and Volition, as well as Sense and spontaneous Motion, there are Men ready presently to limit the Power of the Omnipotent Creator, and tell us, he cannot do it; because it destroys the Essence, or changes the essential Properties of Matter. To make good which Affertion they have no more to fay, but that Thought and Reason are not included in the Essence of Matter. I grant it; but whatever Excellency, not contained in its Essence, be superadded to Matter, it does not defiroy the Essence of Matter, if it leaves it an extended solid Substance; wherever that is, there is the Essence of Matter; and if every thing of greater Perfection, superadded to such a Substance, destroys the Essence of Matter, what will become of the Essence of Matter in a Plant, or an Animal, whose Properties sar exceed those of a mere extended solid Substance?

But'tis farther urged, That we cannot conceive how Matter can think. I grant it; but to argue from thence, that God therefore cannot give to Matter a Faculty of Thinking, is to fay God's Omnipotency is limited to a narrow Compass, because Man's Understanding is so; and brings down God's infinite Power to the Size of our Capacities. If God can give no Power to any Parts of Matter, but what Men can account for from the Essence of Matter in general: If all such Qualities and Properties must destroy the Essence, or change the effential Properties of Matter, which are to our Conceptions above it, and we cannot conceive to be the natural

natural Consequence of that Essence; it is plain, that the Essence of Matter is destroy'd, and its essential Properties changed in most of the sensible parts of this our System: For 'tis visible, that all the Planets have Revolutions about certain remote Centers, which I would have any one explain, or make conceivable by the bare Essence or natural Powers depending on the Essence of Matter in general, without something added to that Essence, which we cannot conceive; for the moving of Matter in a crooked Line, or the Attraction of Matter by Matter is all that can be said in the Case; either of which, it is above our Reach to derive from the Essence of Matter or Body in general; tho' one of these two must waveledably be allowed to be superadded in this Instance to the Essence of Matter in general. The Omnipotent Creator advised not with us in the making of the World, and his Ways are not the less excellent because they are past our finding out.

In the next place, the vegetable part of the Creation is not doubted to be wholly Material; and yet he that will look into it, will observe Excellencies and Operations in this part of Matter, which he will not find contained in the Effence of Matter in general, nor be able to conceive how they can be produced by it. And will be therefore fay, That the Effence of Matter is dellroy'd in them, because they have Properties and Operations not contained in the Effential Properties of Matter as Matter, nor

explicable by the Effence of Matter in general?

Let us advance one Step farther, and we shall in the Animal World meet with yet greater Persections and Properties, no ways explicable by the Essence of Matter in general. If the Omnipotent Creator had not superadded to the Earth, which produced the irrational Animals, Qualities far surpassing those of the dull dead Earth, out of which they were made Life, Sense, and spontaneous Motion, nobler Qualities than were before in it, it had still remained rude senseles Matter; and if to the Individuals of each Species, he had not superadded a Power of Propagation, the Species had perished with those Individuals: But by these Essences or Properties of each Species, supperadded to the Matter which they were made of, the Essence of Properties of Matter in general were not destroy'd or chang'd, any more than any thing that was in the Individuals before, was destroy'd or chang'd by the Power of Generation, superadded to 'em by the first Benediction of the Almighty.

In all fuch Cases, the superinducement of greater Persections and nobler Qualities, destroys nothing of the Essence or Persections that were there before; unless there can be shewed a manifest Repugnancy between them: But all the Proof effered for that, is only, That we cannot conceive how Matter, without such superadded Persections, can produce such Essents; which is, in Truth, no more than to say, Matter in general, or every part of Matter, as Matter, has em not; but is no Reason to prove, that God, if he pleases, cannot superadd em to some parts of Matter, unless it can be proved to be a Contradiction, that God should give to some parts

Vol. II.

of Matter, Qualities, and Perfections, which Matter in general has not; tho' we cannot conceive how Matter is invested with 'em, or how it operates by Virtue of those new Endowments. Nor is it to be wondered that we cannot, whilf we limit all its Operations to those Qualities it had before, and would explain 'cm by the known Properties of Matter in general, without any fuch superinduced Persections. For if this be a right Rule of Reasoning, to deny a Thing to be, because we cannot conceive the manner how it comes to be: I shall defire 'em who use it, to stick to this Rule, and he what work it will make both in Divinity as well as Philosophy; and whether they can advance any thing more in favour of Scatteifin ?

For to keep within the present Subject of the Power of Thinking and Self-motion, besto wed by Omnipotent Power on some Parts of Matter: The Objection to this is, I cannot conceive how Matter should Think: What is the Configuence? Ergo, God cannot give it a Power to Think. Let this fland for a good Reason, and then proceed in other Cases by the You cannot conceive how Matter can attract Matter at any Distance, much less at the Distance of 1000000 Miles; Ergo, God cannot give it inch a Power; You cannot conceive how Matter should feel, or move it felf, or affect an Immaterial Being, or be moved by it; Ergo, God cannot give it such Powers, which is in effect to deny Gravity, and the Revolution of the Planets about the Sun; to make Brutes mere Machines without Sense or spontaneous Motion, and to allow Man neither Senfe nor voluntary Motion.

Let us apply this Rule one Degree farther. You cannot conceive how an extended folid Substance should think, therefore God cannot make it think; Can you conceive Low your own Soul, or any Subilance, thinks? You had indeed that you do think, and fo do I; but I want to be told how the Action of Thinking is performed: This, I confess, is beyond my Conception; and I would be glad an, one, who conceives it, would explain it to me. God, I find has given me this Faculty; and fince I cannot but be convinc'd of his Power in this Inflance, which tho' I every Moment experiment in my felf, yet I cannot conceive the manner of:

What would it be less than an infolent Abfurdity, to deny his Power in

other like Cafes, only for this Reason, because I cannot conceive the manner how?

To explain this matter a little farther. God has created a Subflance; Let it be, for example a folid extended Substance. Is God bound to give it belides Being, a Power of Action? That, I think, no Body will fay: He therefore may leave it in a State of Inactivity, and it will be neverthelefs a Subhance; for Action is not necessary to the Being of any Subfrance that God does create: God has likewife created and made to exist, de novo, an immaterial Subflance, which will not lofe its Being of a Subfl nce, tho' God should beslow on it nothing more but this bare Being, without giving it any Activity at all. Here are now two distinct Substances, the one Material, the other Immaterial, both in a State of perfect Inactivity. Inactivity. Now I ask, What Power God can give to one of these Substances (supposing 'em to retain the same distinct Natures, that they had as Substances in their State of Inactivity) which he cannot give to the other? In that State, 'tis plain, neither of 'em thinks; for Thinking being an Action, it cannot be denied, that God can put an end to any Action of any created Substance, without annihilating of the Substance whereof it is an Action; and if it be so, he can also create or give Paristence to such a Substance, without giving that Substance any Action at all. By the same Reason it is plain, that neither of them can move it self. By the same Reason it is plain, that neither of them can move it self-stances, which are equally in a State of perfect Inactivity, the same Power that it can give to the other? Let it be for Example, that of spentancous or Self-motion, which is a Power that 'tis suppos'd God can give to an unfolid Substance, but denied that he can give to a folid Substance.

If it be asked, Why they limit the Omnipotency of God, in reference to the one rather than the other of these Subilances? All that can be f.id to it is, That they cannot conceive, how the folid Subflance should ever be able to move it felf. And as little, fay I, are they able to conceive how a created unfolid Subflance should move it felf: But there may be fomething in an immaterial Substance, that you do not know. I grant it; and in a material one too: For Example, Gravitation of Matter towards Matter, and in the feveral Proportions observable, inevitably shows, that there is fomething in Matter that we do not understand, unless we can conceive Self-motion in Matter; or an inexplicable and inconceivable Attraction in Matter, at immense and almost incomprehensible Distances is It must therefore be confessed, that there is something in solid, as well as unfolid Substances, that we do not understand. But this we know, that they may each of 'em have their diffinct Beings, without any Activity fuperadded to 'em, unless you will deny, That God can take from any Baing its Power of Acting, which 'tis probable will be thought too prefumptuous for any one to do; and I say, it is as hard to conceive Self-motion in a created immaterial as in a material Being, confider it how you will: And therefore this is no Reason to deny Omnipotency to be able to give a Power of Self-motion to a material Subflance, if he pleafes, as well as to an immaterial; fince neither of 'em can have it from themfelves, nor can we conceive how it can be in either of 'em.

The same is visible in the other Operation of Thinking; both these Substances may be made, and exist without Thought; neither of 'em has, or can have the Power of Thinking from it seld: God may give it to either of 'em, according to the good Pleasure of his Omnipotency; and in which-ever of 'em it is, it is equally beyond our Capacity to cenceive, how either of those Substances thinks. But for that Reason, to deny that God, who had Power enough to give 'em both a Being out of nothing, can by the same Omnipotency give them what other Powers and Perfections

fections he pleases, has no better a Foundation than to deny Lis Power of Creation, because we cannot conceive how it is performed; and there at

last this way of Reasoning must terminate.

That Omnipotency cannot make a Substance to be folid and not folid at the fame time, I think, with due Reverence, we may fay; but that a folid Substance may not have Qualities, Perfections, and Powers, which have no natural or visibly necessary Coanection was Solidity and Extension, is too much for us (who are but of Yesterday, and know nothing) to be positive in. If God cannot join Things together by Connections inconceivable to us, we must deny even the Consistency and Being of Matter it felf; since every Particle of it having some Bulk, has its Parts connected by ways inconceivable to us. So that all the Difficulties that are raised against the Thinking of Matter, from our Ignorance or narrow Conceptions, stand not at all in the way of the Power of God, if he pleases to ordain it so; nor proves any thing against his having actually endued some Parcels of Matter, so disposed as he thinks sit, with a Faculty of Thinking, till it can be shown, that it contains a Contradiction to suppose it.

Tho' to me Sensation be comprehended under Thinking in general, yet in the foregoing Discourse, I have spoke of Sense in Brutes as distinct from Thinking: Because your Lordship, as I remember, speaks of Sense in Brutes. But here I take Liberty to observe, That if your Lordship allows Brutes to have Sensation, it will follow, either that God can and doth give to some Parcels of Matter a Power of Perception and Thinking; or that Ill Animals have immaterial, and consequently, according to your Lordship, immortal Souls, as well as Men; and to say that Fleas and Mites, &c. have immortal Souls as well as Men, will possibly be looked

on as going a great way to serve an Hypothesis.

I have been pretty large in making this Matter plain, that they who are fo forward to bellow hard Cenfures or Names on the Opinions of those who differ from them, may confider whether fometimes they are not more due to their own: And that they may be persuaded a little to temper that Heat, which fapposing the Truth in their current Opinions, gives lem (as they think) a Right to lay what Imputations they please on those who would fairly examine the Grounds they fland upon. For talking with a Suppofition and Infinuations, that Truth and Knowledge, nay, and Religion too, stands and falls with their Systems; is at best but an imperious way of bagging the Question, and affaming to themselves, under the Pretence of Zeal for the Cause of Ged, a Title to Intallibility. It is very becoming that Men's Zeal for Truth should go as far as their Proofs, but not go for Proofs themselves. He that attacks received Opinions with any thing but fair Arguments, may, I own, be justly suspected not to mean well, nor to be led by the Love of Truth; but the same may be said of him too, who to defends 'em. An Error is not the better for being common, nor Truth the worfe for having lain neglected: And if it were put to the Vote any where

where in the World, I doubt, as Things are managed, whether Truth would have the Majority, at least, whilst the Authority of Men, and not the Examination of Things, must be its Measure. The Imputation of Scepticism, and those broad Infinuations, to render what I have writ suffected, so frequent as if that were the great Business of all this Pains you have been at about me, has made me say thus much, my Lord, rather as my Sense of the way to establish Truth in its full Force and Beauty, than that I think the World will need to have anything said to it, to make it diffinguish between your Lordship's and my Design in Writing, which therefore I securely leave to the Judgment of the Reader, and return to the Argument in Hand.

What I have above kid, I take to be a full Answer to all that your Lordship would infer from my Idea of Matter, of Liberty, and from the Power of Abstracting. You ask, * How can my Idea of Liberty agree with the Idea that Bodies can p. 73.

operate only by Motion and Impulse? Ans. By the Omni-

potency of God, who can make all Things agree, that involve not a Contradiction. 'Fis true, I say, " + That Bodies ope"rate by Impulse, and nothing die." And so I + Essay, B, 2, thought when I writ it, and yet can conceive no other Ch. 8, §, 11.

way of their Operation. But I am fince convinced

by the judicious Mr. Newton's incomparable Book, that 'tis too bold a Prefumption to limit God's Power in this Point, by my narrow Conceptions. The Gravitation of Matter towards Matter, by ways unconceivable to me, is not only a Demonstration that God can, if he pleases, put into Bodies, Powers, and Ways of Operation, above what can be derived from our Idea of Body, or can be explained by what we know of Matter, but also an unquestionable and every-where visible Indance, that he has done to. And therefore in the next Edition of my Book, I shall take care to have that Passage recti y'd.

As to Self-confeiousness, your Lordship asset, † What is there like Self-consciousness in Matter? Toothing at all in † 1 Ans. Matter as Matter. But that God cannot bestow on some p. 74. Parcels of Matter a Power of Thinking, and with it Self-consciousness, will never be proved by ask ng, # Hore it is # Ibid.

consciousness, will never be proved by ask ng, How it is possible to apprehend that mere Body should percurve that it

doth perceive? The Weaknels of our Apprehension! grant in the Case: I contess as much as you please, that we cannot conceive how a solid, ne, nor how an unfolid created Substance thinks; but this Weaknels of our Apprehensions, reaches not the Power of God, whose Weaknels is thronger than any thing in Men.

Your Argument from Abstraction, we have in this Question,

* If it may be in the Power of Matter to think, how comes it it Ant. to be so impossible for such organized Bodies as the Erntes have, p. 75, to enlarge their Ideas by Abstraction? Institute natural Power of Matter. If that be your Meaning, my Lord, I mither say, nor suppose that

L 3

150 Extent of Humane Knowledge.

all Matter has naturally in it a Faculty of Thinking, but the direct contrary. But if you mean that certain Parcels of Matter, ordered by the Divine Power, as feems fit to him, may be made capable of receiving from his Omnipotency the Faculty of Thinking; that indeed I fay, and that being granted, the Answer to your Question is easy, fince if Omnipotency can give Thought to any folid Substance, it is not hard to conceive, that God may give that Faculty in an higher or lower Degree, as it pleases him, who knows what Dispestion of the Subject is suited to such a particular way or degree of Thinking.

Another Argament to prove, That God cannot endue any Parcel of
Matter with the Faculty of Thinking, is taken from those

1 Let. Words of mine, * where I show, by what Connection of
Lideas we may come to know, That God is an immaterial
Subdance. They are these, "The Idea of an eternal
actual knowing Being, with the Idea of Immateriality, by the Inter-

"vention of the Idea of Matter, and of its actual Division, Divisibility,

"and want of Perception," &. From whence your

† 2 Answ. Lordship thus argues, † Here the want of Perception is p. 77.

owned to be so essential to Matter, that God is therefore concluded to be insmaterial. Arsw. Perception and Know-lodge in that one eternal Being, where it has its Source, 'tis visible must

be essentially inseparable, is not Matter: How far this makes the want of Proception an essential Property of Matter. I will not dispute; it suffices that it shows, That Perception is not an essential Property of Matter; and therefore Matter cannot be that eternal original Being, to which Perception and Knowledge is essential. Matter, I say, naturally is without Perception: Ergo, says your Lerdship, want of Perception is an essential Property of Matter, and God does not change the essential Properties of things, their Nature remaining. From whence you infer, That God cannot bestow on any parcel of Matter (the Nature of Matter remaining) a Faculty of Timeking. If the Rules of Logick since my Days be not changed, I may safely dony this Consequence. For an Argument that runs thus, God does not; Ergo, he cannot, I was taught when I came first to the Uni-

versity, would not hold. For I never said God did.

But, * 'That I see no Contradiction in it, that he
flould, if he pleased, to give some Systems of senseless Matter a Faculty of Thinking;" and I know

no Body, before Des Cartes, that ever pretended to shew that there was any Contradiction in it. So that at worth, my not being able to see in Matter any such Incapacity, as makes it impossible for Omnipotency to bestow on it a Faculty of Thinking, makes me opposite only to the Carteforms. For as far as I have seen or heard, the Fathers of the Christian Church never pretended to demonstrate that Matter was incapable to receive a Power of Scnsation, Perception, and Thinking, from the Hand of the Omnipotent Creator. Let us therefore, if you please, suppose the Form of your Argumentation right, and that your Lordship means, God

cannot:

cannot: And then if your Argument be good, it proves, That God could not give to Baalam's Ass a Power to speak to his Master as he did, for the want of rational Discourse, being natural to that species, 'tis but for your Lordship to call it an essential Property, and then God cannot change the essential Properties of Things, their Nature remaining: Whereby it is proved, That God cannot with all his Omnipotency, give to an Ass a Power to speak as Baalam's did.

You say, * my Lord, you do not set Bounds to God's Omnifotency. For he may if he please change a Body into an immaterial Substance, i.e. take away from a

Substance the Solidity which it had before, and which made it Matter, and then give it a Faculty of Thinking which it had not before, and which makes it a Spirit, the same Substance remaining. For it the same Substance remains not, Body is not charged into an immaterial Substance. But the solid Substance and all belonging to it is annihilated, and an immaterial Substance created, which is not a change of one thing into another, but the destroying of one, and malting another de note. In this change therefore of a Body or material Substance into an immaterial, let us observe these distinct Considerations.

First, you say, God may if he pleases take away from a solid Substance Solidity, which is that which makes it a material Substance or Body; and may make it an immaterial Substance, i. e. a Substance without Solidity. But this Privation of one Quality gives it not another; the bare taking away a lower or less noble Quality does not give it an algaer or nobler; that must be the Gift of God. For the bare trivation of one, and a mean-

away a lower or less noble Quality does not give it an light r or nobler; that must be the Gift of God. For the bare i rivation of one, and a meaner Quality, cannot be the Position of an ligher and better; unless any one will say, that Cogitation, or the Power of Thinking, results from the Nature of Substance it felf; which if it do, then wherever there is Substance, there must be Cogitation, or a Power of Thinking. Here then, upon your Lordship's own Principles, is an immaterial Substance without the Faculty of Thinking.

In the next place, you will not deny, but God may give to this Sub-flance, thus deprived of Solidity, a Pacalty of Trinking; for you fire the it made capable of that by being made into terial, whereay you allow, that the fame numerical Subflance may be to netimes when hy incognitative, or without a Power of thinking, and at other times perfectly cognitative, or in his dividual Power of Thinking.

Further, you will not deny, but God can give it Solidity and make it material again. For I conclude it will not be denied, that God can make it again, what it was before. Now I crave leave to afk your Loraflap, why God having given to this Substance the Faculty of Thinking after Solidity was tak in from it, cannot reflore to it Solidity again, without taking away the Faculty of Thinking. When you it we resolved this, my Lord, you will have proved it impessible for God's Omnipetence to give

give to a folid Substance a Faculty of Thinking; but till then, not having proved it impossible, and yet denying that God can do it, is to deny that

he can do, what is in it felf possible; which as I humbly

* t Ans.

p. 73.

he can do, what is in it felf possible; which as I humbly

conceive is visibly to fet Bounds to God's Omnipetency,

though you say here, * you do not set Bounds to God's

Omnipetency.

If I should imitate your Lordship's way of Writing, I should not omit to bring in Epicurus here, and take Notice that this was his way, Deum werbis poncre, re tollere. And then add, that I am certain you do not think he promoted the great Ends of Religion and Morality. For 'tis with such

candid and kind Infinuations as these, that you tried in both + Hobbes, and † Spinosa, into your Discourse here about God's being able, if he please, to give to some Parcels of Matter ordered as he

thinks fit, a Faculty of Thinking. Neither of those Authors having, as appears by any Passages you bring out of 'em, faid any thing to this Question, nor having, as it feems, any other Business here, but by their Names skillfully to give that Character to my Book, with which you would recommend it to the World.

I pretend not to enquire what measure of Zeal, nor for what, guides your Lordship's Pen in such a way of Writing, as yours has all along been with me: Only I cannot but consider, what Reputation it would give to the Writings of the Fathers of the Church, if they should think Truth required, or Religion allowed them to imitate such Patterns. But God be thanked, there be those amongst 'em who do not admire such ways of managing the Cause of Truth or Religion. They being sensible, that if every one who believes, or can pretend he has Truth on his side, is thereby authorized without Proof, to infinuate whatever may serve to prejudice Mens Minds against the other side, there will be great Ravage made on Charity and Practice, without any Gain to Truth or Knowledge. And that the Liberties frequently taken by Disputants to do so, may have been the Cause that the World in all Ages has received so much Harm, and so little Advantage from Controversies in Religion.

These are the Arguments which your Lordship has brought to consute one Saying in my Book, by other Passages in it, which therefore being all but Argumenta ad Hominem, if they did prove what they do not, are of no other use, than to gain a Victory over me, a thing methinks so much beneath your Lordship, that it does not deserve one of your Pages. The Question is, whether God can, if he pleases, bestow on any Parcel

of Matter, ordered as he thinks fit, a Faculty of Perception and Thinking. You say, \(\| \textit{You look upon a Mistake berein to be of dangerous Consequence, as to the great Ends of Religion and Morality. If this be so, my Lord, I think

one may well wonder, why your Lordship has brought no Arguments to establish the Truth it self, which You look on to be of such dangerous Consequence to be mistaken in; but have spent so many Pages only in a Personal Matter

Matter, in endeavouring to shew, That I had Inconsistencies in my Book, which if any such thing had been shewed, the Question would be still as far from being decided, and the danger of mistaking about it as little prevented, as it nothing of all this had been said. It therefore your Lordship's Care of the great Ends of Religion and Morality have made You think it necessary to clear this Question, the World has Reason to conclude there is little to be said against that Proposition, which is to be sould in my Book concerning the Possibility, that some Parcels of Matter might be so ordered by Omnipotence, as to be endued with a Faculty of Thinking if God so pleased, since your Lordship's Concern for the promoting the great Ends of Religion and Morality, has not enabled you to produce one Argument against a Proposition, that you think of so dangerous Consequence to them.

And here I crave leave to observe, That tho' in your Title Page you promise to prove; that my Notion of Ideas is inconsistent with it self, (which if it were, it could hardly be proved to be inconsistent with any thing else) and with the Articles of the Christian Faith; yet your Attempts all along have been to prove me in some Passages of my Book inconsistent with my self, without having shewn any Proposition in my Book inconsistent with

any Article of the Christian Faith.

I think, your Lordship has indeed made use of one Argument of your own: But it is such an one, that I confess I do not see how it is apt much to promote Religion, especially the Christian Religion founded on Revelation. I shall set down your Lordship's Words, that they may be consider'd, you say: * That you are of Opinion, that the great Ends of Religion and Morality are best secured P. 54, 55. by the Proofs of the Immortality of the Soul from its Nature and Properties, and which you think proves it immaterial. Your Lordship does not Question whether God can give Immortality to a material Substance; but you say, it takes off very much from the Evidence of Immortality, if it depend wholly upon God's giving that, which of its own Nature it is not capable of, &c. So likewise you say, + If t 2 Ans. a Man cannot be certain, but that Matter may think, (as I affirm) then what becomes of the Soul's Immateriality (and consequently Immortality) from its Operations? But for all this, fay I. his

consequently Immortality) from its Operations? But for all this, say I, his Assurance of Faith remains on its own Basis. Now you appeal to any Man of Sonse, whether the sinding the Uncertainty of his own Principles which he wont upon in Point of Reason, doth not weaken the Credibility of these swent upon in Point of Reason, doth not weaken the Credibility of these fundamental Articles, when they are considered furely as Matters of Faith? For before there was a natural Credibility in them on the account of Reason; but by going on wrong Grounds of Certainty, all that is lost, and instead of teing certain, he is more doubtful than over. And if the Evidence of Faith salls so much short of that of Reason, it must need have less effect upon Mens Minds, when the Substitutions of Keason is taken away; as it must be when the Grounds of Certainty by Reason are vanished. Is it at all probable, That he win sinds his Reason deceive him

in juch Fundamer al Points, should have his Faith stand from and unmoveable on the Account of Revolution? For in Matters of Revolution, there and, he some antecedent Principle supposed before we can believe any thing on the Account of it.

More to the fame Purpole we have fome Paffages farther, where from fome of my Words, your Lordship fays, * You cannot but

* Ib. p. 35. observe, That we have no Certainty upon my Grounds that Self consciousness depends upon an individual immaterial Subfiance, and configurally that a material Substance may, according to my Printing of the configuration of the co

stance, and configurally that a material Substance may, according to my Principles, here & ly consciousness in it; at least that I am not certain of the contract. Whereupon your Lordship bids me consider, whether this doth not a little agreet the whole deticle of the Resurrection? What does all this tend to? But to make the World believe, that I have besteen the Credibility of the Immortality of the Soul, and the Resurrection, by saying, That tho' it be most highly probable, that the Soul is immaterial, yet upon my Principles it cannot be demonstrated; because it is not impossible to God's Omnipotency, if he pleases to bestow upon some Parcels or Matter, dif-

poled as he fees fit, a Faculty of Thinking.

This your Accutation of my leffening the Credibility of these Articles of Faith, is founded on this, That the Article of the Immortality of the Soul abates of its Credibility, if it be allowed, That its Immateriality (which is the supposed Proof from Reason and Philosophy of its Immortality) cannot be demonstrated from natural Reason: Which Argument of your Lordship's bottoms, as I humbly conceive, on this, That Divine Revelation abates of its Credibility in all those Articles it proposes proportionably as Humane Reason fails to support the Testimony or God. And all that your Lordflop in those Pass gas faid, when examined, will I suppose le found to import thus me , viz. Does God propose any thing to Mankind to be believed? It is very fit and credible to be believed, if Reason can demonstrate it to be true. But if Humane Reason come short in the Cafe, and cannot make it out, its Credibility is thereby leffened; which is in effect to fay, That the Veracity of God is not a firm and fure Foundation of Faith to rely upon, without the concurrent Testimony of Readin, i.e. with Reverence be it spoken, God is not to be believed on his own Word, unless what he reveals be in it fell credible, and might be beliaved without him.

If this be a way to promote Religion, the Christian Religion in all its Articles, I am not forry, that it is not a way to be found in any of my Viritings; for I imagine any thing like this would, (and I should think deferved) to have other Tirls than bare Sopticism bestowed upon it, and would have rained no small Outery against any one, who is not to be supposed to be in the right in all that he saye, and so may securely say what he pleases. Such as I, the Proplanum Vulyas, who take too much upon us, if we would examine, have nothing to do but to hearken and believe, the what he said should subvert the very Foundations of the Christian

 Γ with.

What I have above observed, is so visibly contained in your Lordship's Argument, That when I met with it in your Answer to my first Letter, it seemed so strange from a Man of your Lordship's Character, and in a Dispute in Desence of the Doctrine of the Trinity, that I could hardly persuade my self, but it was a Slip of your Pen: But when I sound it in your second Letter * made use of again, and * 2 Ans. p. seriously enlarged as an Argument of Weight to be infished 28, & 29. upon, I was convinced, that it was a Principle, that you heartily embraced, how little savourable soever it was to the Articles of the Christian Religion, and particularly those which you undertook to defend.

I defire my Reader to peruse the Passages as they stand in your Letters themselves, and see whether what you say in them does not amount to this, That a Revelation from God is more or less credible, according as it has a

stronger or weaker Confirmation from Humane Reason. For,

1. Your Lordship says, † You do not Question whether
God can give Immortality to a material Substance; but you
fay it takes off very much from the Evidence of Immortality, if it depends wholly upon God's giving that which of its

own Nature it is not capable of. To which I reply, any ones not being able to demenstrate the Soul to be immaterial, takes off not very much, nor at all from the Evidence of its Immortality, if God has revealed, that it shall be immortal; because the Veracity of God is a Demonstration of the Truth of what he has revealed, and the want of another Demonstration of a Proposition, that is demonfirstively true, takes not off from the Evidence of it. For where there is a clear Demonstration, there is as much Evidence as any Truth can have, that is not felf-evident. God has revealed, that the Souls of Men shall live for ever. But, fays your Lordship, from this Evidence it takes off very much if it depends wholly upon God's giving that, which of its own Nature it is not capable of, i. e. The Revelation and Testimony of God loses much of its Evidence, if this depends wholly upon the good Pleafure of God, and cannot be demonstratively made out by natural Reason, that the Soul is immaterial, and confequently in its own Nature immortal. For that is all that here is or can be meant by these Words, wekich of its own Nature it is not capable of, to make them to the Purpose. For the whole of your Lordship's Discourse here, is to prove, That the Soul cannot be material, because then the Evidence of its being immortal would be very much leffened. Which is to fay, That 'tis not as credible upon Divine Revelation, that a material Substance should be immortal, as an immaterial; or which is all one, That God is not equally to be believed, when he declares, that a material Subtlance shall be immortal, as when he declares, that an immaterial shall be so, because the Immortality of a material Subtlance, cannot be demonstrated from natural Region.

156 Extent of Humane Knowledge.

Let us try this Rule of your Lordship's a little farther. God had revealed, that the Bodies Men shall have after the Resurrection, as well as their Souls, shall live to Eternity. Does your Lordship believe the eternal Life of the one of these, more than of the other, because you think you can prove it of one of them by natural Reason, and of the other not? Or can any one, who admits of Divine Revelation in the Case, doubt of one of them more than the other? Or think this Proposition less credible, the Bodies of Men, after the Refurrection, shall live for ever; than this, That the Souls of Men shall, after the Returnection, live for ever? that he must do, if he thinks either of them is less credible than the other. If this be so, Reason is to be consulted how far God is to be believed, and the Credit of Divine Testimony, must receive its Force from the Evidence of Reason; which is evidently to take away the Credibility of Divine Revelation in all supernatural Truths, wherein the Evidence of Reason fails. And how much such a Principle as this tends to the Support of the Doctrine of the Trinity, or the promoting the Christian Religion, I shall leave it to your Lordship to consider.

I am not so well read in Hobbes or Spinosa, as to be able to say, what were their Opinions in this Matter. But possibly there be those, who will think your Lordship's Authority of more use to them in the Case, than those justly decried Names: And be glad to find your Lordship a Patron of the Oracles of Reason, so little to the Advantage of the Oracles of Di-

vine Revelation. This at least, I think, may be subjoined to the Words at the Bottom of the next Page, * That p. 65.

p. 65.

the Words at the Bottom of the next Page, * That these who have gone about to lessen the Credibility of Articles of Faitn, which evidently they do, who say they are less credible, because they cannot be made out demonstratively by natural Reason, have not been thought to secure several of the Articles of the Carristian Faith, especially those of the Trinity, Incarnation, and Refurection of the Body, which are those upon the Account of which I am brought by your Lordship into this Dispute.

I shall not trouble the Reader with your Lordship's Erdeavours in the following Words, to prove, That if the Soul be not an immaterial Substance, it can be nothing but Life; your very first Words visibly consuling

all that you aliedge to that Purpose. They are, † If
† 1 Ans. the Soul be a material Subfance, it is really nothing but
p. 55. Life; which is to say, That it the Soul be really a Subflance, it is not really a Subflance, but really nothing else
but an Affection of a Subflance; for the Life, whether of a material or
immoterial Subflance, is not the Subflance it felf, but an Affection of
it.

2. You say, † Altho' we think the separate State of the † 1 Ans. Soul-after Death, is sufficiently rewealed in the Scripture; p 57.

yet it creates a great Difficulty in understanding it, if the Soul be nothing but List, or a material Substance, which must be disjolved when Life is ended. For if the Soul be a material Substance,

fiance, it must be made up, as others are, of the Cobesism of solid and separate Parts, how minute and invisible souver they be. And what is it which should keep'em together, when Life is gone? So that it is no easy matter to give an Account, how the Soul should be capable of Immortality, and is it be an immaterial Substance; and then we know the Solution and Texture of Bodies cannot reach the Soul, being of a different Nature.

Let it be as hard a matter as it will to give an Account what it is, that should keep the Parts of a material Soul together, after it is separated from the Body; yet it will be always as easy to give an Account of it, as to decount what it is which shall keep together a material and immaterial Substance. And yet the Difficulty that there is to give an Account of that, I hope does not with your Lordship, weaken the Credibility of the inseparable Union of Soul and Body to Eternity: And I persuade my felt, that the Men of Sense, to whom your Lordship appeals in the Case, do not find their Belief of this Fundamental Point, much weakened by that Difficulty. I thought heretofore (and by your Lor Ahip's Permission would think to still) that the Union of Parts of Matter, one with another, is as much in the Hands of God, as the Union of a material and immaterial Substance; and that it does not take off very much, or at all, from the Ewidence of Insmortality, which depends on that Union, that it is no easy matter to give an Account what it is that should keep'em together: Tho' its depending wholly upon the Gift and good Pleasure of God, where the manner creates great Difficulty in the Understanding, and our Reason cannot discover in the Nature of Things, how it is, be that which your Lordship so positively says, lessens the Credibility of the Fundamental Articles of the Resurrection and Immortality.

But, my Lord, to remove this Objection a little, and to shew of how small Force it is even with your self; give me leave to preiume. That your Lordship as sirmly believes the Immortality of the Body after the Resurrection, as any other Article of Faith: If so, then it being no toss matter to give an Account, what it is that shall keep together the Farts of a matter ial Soul, to one that believes it is material, can no more remarken the Credibility of its Immortality, than the like Dissipulty weak no the Credibility of the Immortality of the Body. For when your Lordship shall find it an easy matter to give an Account what it is besides the good Pleasure of God, which shall keep together the Parts of our material Bodies to Extensity, or even Soul and Body; I doubt not but any one, who shall think the Soul material, will also find it as easy to give an Account, what it is

that shall keep those Parts of Matter also to ether to Eternity.

Were it not that the Warmth of Controversy is apt to make Mon so far sorget, as to take up those Principles themselves (when they will serve their turn) which they have nightly consemned in others, I should wonder to find your Lording to argue, that because it is a Difficulty to understand awar should keep together the minute Parts of a material Soul, when Life is gone; and because it is not an taly Matter to give an Account how the Soul should

Should be capable of Immortality, unless it be an immaterial Substance: Therefore it is not so credible as if it were easy to give an Account by natural Reason, how it could be. For to this it is, that all this your Discourse tends, as is evident by what is already set down out of Page 55; and will be more fully made out by what your Lordship says in other Places, tho' there needs no such Proofs, since it would all be nothing against me in

any other Sense.

I thought your Lordship had in other Places afferted, and infifted on this Truth, That no part of Divine Revelation was the less to be believed, because the thing it self created great Difficulty in the Understanding, and the manner of it was hard to be explained; and it was no easy matter to give an Account how it was. This, as I take it, your Lordship condemned in others, as a very unreasonable Principle, and such as would subvert all the Articles of the Christian Religion, that were mere Matters of Faith, as I think it will: And is it possible, that you should make use of it here your felt, against the Article of Life and Immortality, that Christ hath brought to light through the Gospel, and neither was, nor could be made out by natural Reason without Revelation? But you will fay, you focak only of the Soul; and your Words are, That it is no easy matter to give an Account how the Soul should be capable of Immortality, unless it be an immaterial Substance. I grant it; but crave leave to fay, That there is not any one of those Difficulties, that are, or can be raised about the Manner how a material Soul can be immortal, which do not as well reach the Immortality of the Body.

But if it were not so, I am sure this Principle of your Lordship's would reach other Articles of Faith, wherein our natural Reason finds it not so easy to give an Account both those Mysteries are: And which therefore, according to your Principles, must be less credible, than other Articles,

that create less Difficulty to the Understanding. For your
* 2 Ans. Lordship says, * That you appeal to any Man of Sense,
p. 28. solether to a Man who thought by his Principles, he could from natural Grounds demonstrate the Immortality of the
Soul, the finding the Uncertainty of these Principles he went upon in point of
Reason, i.e. the finding he could not certainty prove it by natural Reason,
dult not awaken the Credibility of that Fundamental Article, when it is considered purely as a Biatter of Faith? Which in effect, I humbly conceive,
amounts to this, That a Proposition divinely revealed, that cannot be
proved by natural Reason, is less credible than one that can: Which
seems to me to come very little short of this, with due Reverence be it
specken, That God is less to be believed when he affirms a Proposition that
cannot be proved by natural Reason, than when he proposes what can
be proved by it. The direct contrary to which is my

† 2 Ans. Opinion, tho you endeavour to make good by these solp. 29. lowing Words, † If the Evidence of Faith salls so much front of that of Reason, it must needs have less effect upon Mens Minds, when the Subserviency of Reason is taken away; as it must

be when the Grounds of Certainty by Reason are vanished. Is it at all probuble, that he who finds his Reason deceive him in such Fundamental Points, Should have his Faith stand firm and unmoveable on the Account of Reveletion? Than which I think there are harely plainer Words to be lound out to declare, that the Credibility of God's Testimony depends on the natural Evidence or Probability of the Things we receive from Revelation; and lifes and falls with it: And that the Truths of God, or the Articles of mere Faith, lefe formuch of their Credibility, as they want Proof from Reason: Which if true, Revelation may come to have no Credibility at all. For if in this prefent Case, the Credibility of this I'roposition, the Souls of Men shall live for ever, revealed in Scripture, be lessened by confessing it cannot be demonstratively proved from Reusen; tho' it be afferted to be most highly probable: Must not, by the same Rule, its Credibility dwindle away to nothing, it natural Keafon frould not be able to make it out to be so much as probable; or should place the Probability from natural Principles on the other fide? For if more want of Demonstration leffers the Credibility of any Proposition divinely revealed, must not want of Probability, or contrary Probability from natural Reafon, quite take away its Credibility? Here at last it must end, if in any one Case the Veracity of God, and the Credibility of the Truths vieweceive from him by Revelation, be subjected to the Verdicts of Humanc Reason, and be allowed to receive any Accession or Diminution from other Proofs, or want of other Proofs of its Certainty or Probability.

If this be your Lordship's way to promote Religion, or defend its Articles, I know not what Argument the greatest Enemies of it could me more effectual for the Subversion of those you have undert ken to defend, this being to resolve all Revelation perfectly and purely into natural Reason, to bound its *Credibility* by that, and leave no room for haith in other Things, than what can be accounted for by natural Reason without Reven

lation,

Your Lordship * insists much much upon it, as if I had contradicted what I had said in my Essar, by saying, † That upon my Principles it cannot be demonstratively proved, that it is an immaterial Substance in us that Thinks, however probable it be. He that will be at the Pains to read that Chapter of

Spirit

mine, and confider it, will find, that my Bufinefs there was to flow, that it was no harder to conceive an immaterial than a material Subhance; and that from the Ideas of Thought, and a Power of moving of Idease, which we experienced in our felves, (Ideas or ginally not blenging to Matter as Matter) there was no more Difficulty to conclude there was an immaterial Subflance in us, than that we had material lasts. Thefe Ideas of Thinking, and Power of moving of Matter, I in another place flewed did demonstratively lead us to the certain Knowledge of the Existence of an immaterial Thinking Being, in whom we have the Idea of

Spirit in the strictest Sense; in which Sense I also applied it to the Soul, in that 23d Ch. of my Essay, the easily conceivable Possibility, nay great Probability that the thinking Substance in us is immaterial, giving me sufficient Ground for it: In which Sense I shall think I may tasely attribute it to the Thinking Substance in us, till your Lordship shall have better proved from my Words, That it is impossible it should be immaterial. For I only say, That it is possible, i. e. involves no Contradiction, that God the Omnipotent immaterial Spirit should, if he pleases, give to some parcels of Matter, disposed as he thinks nt, a Power of Thinking and Moving: Which parcels of Matter so endued with a Power of Thinking and Motion, might properly be called Spirits, in Contradistinction to unthinking Matter. In all which, I presume, there is no manner of Contradiction.

I justified my use of the Word Spirit in that Sense from the Authorities of Cicero and Virgil, applying the Latin Word Spiritus, from whence Spi-

rit is derived, to the Soul as a thinking Thing, without * 1 Ans. excluding Materiality out of it. To which your Lordship p. 58. — 60. replies, * That Cicero in his Jusculan Questions, Supposes the Soul not to be a finer fort of Body, but of a different Nature from the Body. - That he calls the Body the Prison of the Soul. -And fays, That a wife Man's Bufiness is to draw off his Soul from his Body. And then your Lordship concludes, as is usual, with a Question, Is it posfible now to think fo great a Man looked on the Soul but as a Modification of the Body, which must be at an end with Life? Answ. No; it is imposfible that a Man of so good Serse as Tully, when he uses the Word Corpus or Body for the gross and visible parts of a Man, which he acknowledges to be Mortal, should lock on the Soul to be a Modification of that Body; in a Discourse wherein he was endeavouring to persuade another, that it was immortal. It is to be acknowledged that truly great Men, such as he was, are not wont so manifestly to contradict teemselves. He had therefore no Thought concerning the Medification of the Body of Man in the Case: He was not such a Trifler as to examine, whether the Modification of the Body of a Man was immortal, when that Body it felf was mortal: And therefore that which he reports as Dicaarchus's Opinion, he dismisses in the beginning without any more ado, c. 11. But Cicero's was a direct, plain, and fensible Enquiry, viz. What the Soul was, to fee whether from thence he could discover its Immortality? But in all that Discourse in his first Book of Tusculan Questions, where he lays out so much of his Reading and Reason, there is not one Syllable shawing the least Thought that the Soul was an immaterial Substance; but many Things directly to the contrary.

Indeed (1) he shuts out the Body, taken in the † Ch. 19, 22, Sense he uses † Corpus all a long, for the sensible organical parts of a Man; and is positive that is not the Soul: And Body in this Sense, taken for the Humane Body, he calls the Prison of the Soul; and says a wise Man, instancing

stancing in Socrates and Cato, is glad of a fair Opportunity to get out of it. But he no where fays apy such thing of Matter: He calls not Matter in general the Prison of the Soul, nor talks a Word of being teparate from it.

2. He concludes, that the Soul is not like other Things here below,

made up of a Composition of the Elements, Ch 27.

2. He excludes the two gross Elements, Earth and Water, from being

the Soul, Ch. 26.

So far he is clear and positive: But beyond this he is uncertain; beyond this he could not get. For in some Places he speaks doubtfully, whether the Soul be not Air, or Fire. Anima sit animus ignifice nessio, c. 25. And therefore he agrees with Panætius, that, is it be all Elementary, it is, as he calls it, Instammata Anima, instanced Air; and for this he gives several Reasons, c. 18, 19. And though he thinks it to be of a peculiar Nature of its own, yet he is so far from thinking it immaterial, that he says, c. 19. That the admitting it to be of an aerial or igneous

Nature, would not be inconfistent with any thing he had faid.

That which he feems most to incline to is, That the Soul was not at all Elementary, but was of the fame Substance with the Heavens; which Aristotle, to distinguish it from the sour Elements, and the changeable Bodies here below, which he supposed made up of them, called Quinta Essentia. That this was Tully's Opinion is plain from these Words, Ergo, Animus qui, ut ego dico, divinus cft, ut Euripides audet dicere Deuc; & quidem si Deus, aut anima aut ignis est, idem est animus hominis. Nam ne îlla natura cœlestis & terra vacat & humore; sic utriusq; harum rerum humanus animus est expiri. Sin autem est quinta quædam natura ab Aristotele industa; primum hac & deorum oft & animorum. Hanc nos sententiam secuti, his ipsis verbis in Consolatione hac expressimus, ch. 26. And then he goes on, c. 27. to repeat those his own Words, which your Lordship has quoted out of him, wherein he had affirmed, in his Treatife de Confolatione, the Soul not to have its Original from the Earth, or to be mixed or made of any Thing earthly; but had faid, Singularis est igitur quædam natura & vis animi sejuncta ab his usitatis notisque naturis: Whereby, he tells us, he meant nothing but Aristotle's Quinta Essentia; which being unmixed, being that of which the Gods and Souls confifled, he calls it aivinum caliste, and concludes it eternal, it being as he speaks, Sejuncia ab omni mortali concretione. From which it is clear, That in all his Enquiry about the Substance of the Soul, his Thoughts went not beyond the four Elements, or Ariffold's Quinta Essentia, to look for it. In all which there is nothing of Immateriality, but quite the contrary.

He was willing to believe (as good and wife Men have always been) that the Soul was immortal; but for that, 'tis plain he never thought of its Immateriality, but as the Eastern People do, who believe the Soul to be immortal, but have nevertheless no Thought, no Conception of its Immateriality. It is remarkable what a very considerable and judicious

Vol. II. Author

* Loubere du Royaume de Siam, T. 1. c. 19. Author fays * in the Case. No Opinion, says he, has been so universally received us that of the Immortality of the Soul; but its Immateriality is a Truth the Knowledge whereof has not spread so far. And indeed it is extremely difficult to let into the Mind of a Siamite, the Idea of a pure Spirit. This the Missionaries, who have been longest

among them, are positive in. All the Pagans of the East do truly believe, That there remains something of a Man after his Death, which subsisses independently and separately from his Body. But they give Extension and Figure to that which remains, and attribute to it all the same Members, all the same Substances, both solid and liquid, which your Bodies are composed of. They only suppose that the Souls are of a Matter substences being seen or handled. — Such were the Shades and the Manes of the Greeks and the Romans. And its by these Figures of the Souls, answerable to those of the Bodies, that Virgil supposed Aneas know Palinurus, Dido and Anchises in the other World.

This Gendeman was not a Man that travelled into those Parts for his Pleasure, and to have the Opportunity to tell strange Stories, collected by Chance, when he returned: But one chosen for the purpose (and he seems well chosen for the purpose) to inquire into the Singularities of Siam. And he has so well acquitted himself of the Commission, which his Epistle Dedicatory tells us he had, to inform himself exactly of what was most remarkable there, that had we but an Account of other Countries of the East, as he has given us of this Kingdom, which he was an Envoy to, we should be much better acquainted than we are, with the Manners, Notions and Religions of that part of the World, inhabited by civilized Nations, who want neither good Sense nor Acuteness of Reason, tho' not

cast into the Mould of the Logick and Philosophy of our Schools.

But to return to Ciccro, 'tis plain, That in his Enquiries about the Soul, his Thoughts went not at all beyond Matter. This the Expressions that drop from him in feveral Places of this Book, evidently shew. For Example, That the Souls of excellent Men and Women afcended into Heaven; of others that they remained here on Earth. c. 12. That the Soul is hot and warms the Body: That at its leaving the Body it penetrates and divides, and breaks thro' our thick, cloudy, moist Air: That it stops in the Region of Fire, and ascends no farther, the Equality of Warmth and Weight making that its proper Place, where it is nourished and sustained with the same Things, wherewith the Stars are nourished and sustained, and that by the Convenience of its Neighbourhood it shall there have a clearer View and fuller Knowledge of the Heavenly Bodies, c. 19. That the Soul also from this Height shall have a pleasant and fairer Prospect of the Globe of the Earth, the Disposition of whose Parts will then lie before it in one View, c. 20. That it is hard to determine what Conformation, Size, and Place, the Soul has in the Body: That it is too fubtle to be feen: That it is in the Humane Body as in a House or a Veffel, or a Receptacle, c. 22. All which are Expressions that sufficiently evidence, that he who used 'cm had not in his Mind separated Materiality from the Idea of the Soul.

It may perhaps be replied, That a great part of this which we find in chap. 19. is faid upon the Principles of those who would have the Scul to be Anima inflammata, inflamed Air. I grant it. But it is also to be observed, That in this 19th, and the two following Chapters, he does not only not deny, but even admits, That so material a Thing as inflamed

Air may think.

The Truth of the Case in short is this; Cicero was willing to believe the Soul immortal, but when he sought in the Nature of the Soul itself something to establish this his Belief into a Certainty of it, he sound himself at a Lois. He confessed he knew not what the Soul was; but the not knowing what it was, he argues, c. 2. was no Reason to conclude it was not. And thereupon he proceeds to the Repetition of what he had said in his 6th Book de Repub. concerning the Soul. The Argument, which berrowed from Plato, he there makes use of, if it have any Force in it, not only proves the Soul to be immortal, but more than, I think, your Lordship will allow to be true: For it proves it to be eternal, and without beginning, as well as without end, Neque nate certa est, & aterna st, says he.

Indeed from the Faculties of the Soul he concludes right, That it is of divine Original: But as to the Subdance of the Soul, he at the End of this Difcourse concerning its Faculties, c. 25: as well as at the beginning of it, c. 22. is not ashamed to own his Ignorance, what it is; dnime sit animus, ignifice, nescio; nec me pudet ut islos, fateri nescive quod nesciam. Illud, st ulla alia de re obseura affirmare possum, seve anima, seve isnis set animus, eum jurarem esse divinum, c. 25. So that all the Certainty he could attain to about the Soul, was, That he was consident there was fomething Divine in it, i. e. there were Faculties in the Soul that could not refult from the Nature of Matter, but must have their Original from a Divine Power; but yet those Qualities, as Divine as they were, he acknowledged might be placed in Breath or Fire, which your Lordship will not deny to be material Substances. So that all those Divine Qualities, which he fo much and fo justly extels in the Soul, led him not, as appears, fo much as to any the least Thought of Immateriality. This is Demonstration, That he built them not upon an Exclusion of Materiality out of the Soul; for he avowedly professes he does not know, but Breath or Fire might be this Thinking Thing in us : And in all his Confiderations about the Substance of the Soul it self, he fluck in zier or Fire, or zirifotie's Quinta Essentia; for beyond those 'tis evident he went not.

But with all his Proofs out of Plate, to whose Authority he defers so much, with all the Arguments his vast Reading and great Parts could furnish him with for the Immortality of the Soul, he was so little satisfy it so far from being certain, so far from any Thought that he had, or could prove it, that he over and over again prosesses his Ignerance and Do, by

164 Extent of Humane Knowledge.

of it. In the beginning he enumerates the several Opinions of the Philosophers, which he had well studied, about it: And then full of Uncertainty, says, Harum Sententiarum quæ vera sit, Deus aliquis viderit, quæ veri simillima magna quæssio, c. 11. And towards the latter end, having gone them all over again, and one after another examined them, he professes himself still at a loss, not knowing on which to pitch, nor what to determine. Mentis acies, says he, scipsam intuens nonunquam hebescit, ob eamque causam contemplandi diligentiam omittimus. Itaque dubitans, circumspectans, hastians multa adversa revertens tanquam in rate in mari immenso, nostra vehitur oratio, c. 30. And to conclude this Argument, when the Person he introduces as discoursing with him, tells him he is resolved to keep sirm to the Belief of the Immortality; Tully answers, c. 82. Laudo id quidem, & si nihil animis oportet considere: movemur enim seepe aliquo acute concluso, labamus, mutamusque sententiam clarioribus etiam in rebus; in his est enim aliqua obscuritas.

So unmoveable is that Truth delivered by the Spirit of Truth, That the the Light of Nature gave some obscure Glimmering, some uncertain Hopes of a future State; yet Humane Reason could attain to no Clearness, no Certainty about it, but that it was JESUS CHRIST

alone, who had brought Life and Immortality to light, thro' the Gospel*. 'Tho' we are now told, That to own the Inability of natural Reason to

bring Immortality to light, or which passes for the same, to own Principles upon which the Immateriality of the Soul (and as 'tis urged consequently its Immortality) cannot be demonstratively proved, does lessen the Belief of this Article of Revelation, which JESUS CHRIST alone has brought to light, and which consequently the Scripture assures us is established and made certain only by Revelation. This would not perhaps have seemed strange, from those who are justly complained of for slighting the Revelation of the Gospel, and therefore would not be much regarded, if they should contradict so plain a Text of Scripture, in savour of their all-sufficient Reason: But what Use the Promoters of Scritcism and Insidelity, in an Aze so much suspected by your Lordship, may make of what comes from one of your great Authority and Learning, may deserve your Consideration.

And thus, my Lord, I hope, I have fatisfied you concerning Cicero's Opinion about the Soul, in his first Book of Tusculan Questions; which, the I easily believe, as your Lordship says, you are no Stranger to, yet I humbly conceive you have not shewn (and upon a careful Perusal of that Treatise again, I think I may boldly say you cannot shew) one Word in it, that expresses any thing like a Notion in Tully of the Soul's Immateriality, or its being an immaterial Substance.

From what you bring out of Virgil your Lordship

† 1 Ans. p. concludes, † That he no more than Cicero does me any
Kindness in this Matter, being both Afferters of the Soul's
Immortality. My Lord, were not the Question of the
Soul's Immareriality, according to Custom, changed here into that of its
Immortality.

Immortality, which I am no less an Asserter of than either of them, Cicero and Virgil, do me all the Kindness I desired of them in this Matter; and that was to shew, that they attributed the Word Spiritus to the Soul of Man, without any Thought of its Immateriality; and this the Verses you your self bring out of 385.

Virgil, **

Et cum frigida mors animá feduxerit artus, +
Omnibus, umbra locis adero, dabis improbe pænas.

confirm, as well as those I quoted out of his 6th Book; and for this Monsieur de la Loubere shall be my Witness in the Words above set down out of him; where he shews, that there be those amongst the Heathens of our Days, as well as Virgil and others amongst the antient Greeks and Romans, who thought the Souls or Ghosts of Men departed, did not die with the Body, without Thinking them to be perfectly immaterial; the Latter being much more incomprehensible to them than the Former.

Your Lordship's † Answer concerning what is said Eccles. 13. turns wholly upon Solomon's taking the Soul to be immortal, which was not what I questioned: All that I quoted that Place for, was to shew, that

Spirit in English might properly be applied to the Soul, without any Notion of its Immateriality, as the was by Solomon, which whether he thought the Souls of Men to be immaterial, does little appear in that Paffage, where he speaks of the Souls of Men and Beasts together, as he does. But farther, what I contended for, is evident from that Place, in that the Word Spirit is there applied, by our Translators, to the Souls of Beasts, which your Lordship, I think, does not rank amongst the immaterial, and consequently immortal Spirits, tho' they have Sense and spontaneous Motion.

But you say, ‡ If the Soul be not of it self a free thinking
Substance, you do not see what Foundation there is in Nature
for a Day of Judgment. Ans. Tho' the Heathen World
did not of old, nor do to this Day, see a Foundation in Na-

ture for a Day of Judgment; yet in Revelation, if that will fatisfy your Lordship, every one may fee a Foundation for a Day of Judgment, because God has positively declared it; tho' God has not by that Revelation taught us, what the Substance of the Soul is; nor has any where said, That the Soul of it self is a free Agent. Whatsoever any created Substance is, it is not of it self; but is by the good Pleasure of its Creator: Whatever Degrees of Perfection it has, it has from the bountiful Hand of its Maker. For it is true in a natural, as well as a spiritual Sense,

what St. Paul lays, | Not that we are jufficient of our | 2 Cor. 3. 5. felves to think any thing as of our lelves, but our Sufficiency is of God.

But your Lordship, as I guess, by your following Words, would argue, That a material Substance cannot be a free Agent; whereby t suppose M 3

Has freed my Soul from flesh the every stace my those whall hand thee; Villain, how hall fee

you only mean, that you cannot fee or conceive how a folid Substance should begin, stop, or change its own Motion. To which give me leave to answer, That when you can make it conceivable, how any created, finite, dependent Substance can move it felf, or alter or stop its own Motion, which it must to be a free Agent; I suppose you will find it no har-

der for God to bestow this Power on a solid than an unsolid * Tufculan created Substance. Tully, in the Place above-quoted. Quæstian, * could not conceive this Power to be in any thing, but what was from Eternity; Cum pateat igitur æternum id L. 1. C. 23.

esse quod seipsum moveat quis est qui hanc naturam animis effe tributam neget? But the you cannot fee how any created Substance. solid or not solid, can be a free Agent, (Pardon me, my Lord, if I put in both, till your Lordship please to explain it of either, and shew the manner how either of them can, of it felf, move it felf or any thing else) yet I do not think, you will fo far deny Men to be free Agents, from the Difficulty there is to fee how they are free Agents, as to doubt whether there be Foundation enough for a Day of Judgment.

It is not for me to judge how far your Lordship's Speculations reach: But finding in my felf nothing to be truer than what

+ Eccl. 11. 5. the wife Solomon tells me, + As thou knowest not what is the way of the Spirit, nor how the Bones do grow in the Womb of her that is with Child; even so thou knowest not the Works of Ged who maketh all Things. I gratefully receive and rejoice in the Light of Revelation, which fets me at rest in many things; the manner whereof my poor Reason can by no means make out to me: Omnipotency, I know, can do any thing that contains in it no Contradiction; to that I readily believe whatever God has declared, tho' my Reason find Difficulties in it, which it cannot mafter. As in the prefent Cafe, God having revealed that there shall be a Day of Judgment, I think that Foundation enough to conclude Men are free chough to be made answerable for their Actions, and to receive according to what they have done, tho' how Man

In answer to the Place I brought out of St. Luke, † your Lordship alks, Whether, from these Words of our Savieur, I C. 14. v. 39. it follows, that a Spirit is only an Appearance. I Answer, || r Anf. No, nor do I know who drew fuch an Inference from p. 66. them: But it follows, that in Apparitions there is something that appears, and that which appears is not wholly

is a free Agent Jurpals my Explication or Comprehension.

immaterial; and yet this was properly called mrevua, and was often looked upon, by those who call'd it arevue in Greek, and now call it Spirit in English, to be the Ghost or soul of one departed, which I humbly conceive funifies my use of the Word Spirit, for a Thinking Voluntary Agent, whether material or immaterial.

Your Lordship says, * That I grant, that it cannot up-1 Anf. on these Principles be demonstrated, that the spiritual Subflance in us is immaterial: From whence you con-P. 67. clude, Teat then my Grounds of Certainty from Ideas, are plainly given up. This being a way of arguing that you often make use

or no; it being impossible for us, by the Contemplation of our own Ideas, without Revelation, to discover, whether Omnipotency has not given to some Systems of Matter, firly disposed, a Power to perceive and think, or elfe joined and fixed to Matter fo disposed, a thinking immaterial Substance: It being, in respect of our Notions, not much more remote from our Comprehension to conceive, that GOD can, if he pleases, superadd to Matter a Faculty of Thinking, than that he should superadd to it another Substance, with a Faculty of Thinking; fince we know not wherein Thinking confifts, nor to what fort of Substances the Almighty has been pleased to give that Power, which cannot be in any created Being, but merely by the good Pleafure and Bounty of the Creator. For I fee no Contradiction in it, that the first eternal thinking Being, should, if he pleased, give to certain Systems of created sensless Matter, put together as he thinks fit, some Degrees of Sense, Perception, and Thought: Tho', as I think, I have proved, Lib. 4. Ch. 10. it is no less than a Contradiction to suppose Matter (which is evidently in its own Nature void of Sense and Thought) should be that Eternal first thinking Being. What Certainty of Knowledge can any one have that some Perceptions, such as, v. g. Pleafure and Pain, should not be in some Bodies themselves, after a certain manner modified and moved, as well as that they should be in an immaterial Substance, upon the Motion of the parts of Body? Body, as far as we can conceive, being able only to strike and effect Body; and Motion, according to the utmost reach of our Ideas, being able to produce nothing but Motion; fo that when we allow it to produce Pleafure or Pain, or the Idea of a Colour, or Sound, we are fain to quit our Reason, go beyond our Ideas, and artribute it wholly to the good Pleafure of our Maker. For fince we must allow he has annexed Effects to Motion, which we can no way conceive Motion able to produce, what Reason have we to conclude, that he could not order them as well to be produced in a Subject we cannot conceive capable of 'em, as well as in a Subject we cannot conceive the Motion of Matter can any way operate upon? I fay not this, that I would any way lessen the Belief of the Soul's Immateriality: I am not here speaking of Probability, but Knowledge; and I think not only, that it

of, I have often had Occasion to consider it, and cannot after all sea the Force of this Argument. I acknowledge that this or that Proposition cannot upon my Principles be demonstrated; Ergs, I guart this Proposition to be false. That Certainty consists in the Perception of the Agreement or Disagreement of Ideas. For that is my Ground of Certainty, and till that be given up, my Grounds of Certainty are not given up.

becomes the Modesty of Philosophy, not to pronounce magisterially, where we want that Evidence that can produce Knowledge; but also that it is of Use to us, to discern how far our Knowledge does reach; for the State we are at present in, not being that of Vision, we must in many Things, content our felves with Faith and Probability; and in the present Question, about the Immateriality of the Soul, if our Faculties cannot arrive at demonstrative Certainty, we need not think it strange. All the great Ends of Morality and Religion, are well enough fecured, without Philosophical Proofs of the Soul's Immateriality; fince it is evident, that he who made us at first begin to subfist here, sensible intelligent Beings, and for feveral Years continued us in fuch a State, can and will restore us to the like State of Sensibility in another World, and make us capable there to receive the Retribution he has defigned to Men, according to their Doings in this Life. And therefore 'tis not of fuch mighty Necessity to determine one way or t'other, as some over zealous for, or against the Immateriality of the Soul, have been forward to make the World believe. Who, either on the one fide, indulging too much their Thoughts immersed altogether in Matter, can allow no Existence to what is not material: Or, who on the other fide, finding not Cogitation within the natural Powers of Matter, examin'd over and over again, by the utmost Intention of Mind, have the Confidence to conclude, that Omnipotency it felf, cannot give Perception and Thought to a Substance which has the Modification of Solidity. He that confiders how hardly Senfation is, in our Thoughts, reconcilable to extended Matter; or Existence to any Thing that hath no Extension at all, will confess that he is very far from cerrainly knowing what his Soul is. 'Tisa Point, which feems to me, to be put out of the reach of our Knowledge: And he who will give himself leave to consider freely, and look into the dark and intricate part of each Hypothesis, will scarce find his Reason able to determine him fixedly for, or against the Soul's Materiality. Since on which fide foever he views it, either as an unextended Substance, or as a thinking extended Matter; the Difficulty to conceive either, will, whilst either alone is in his Thoughts, still drive him to the contrary fide. An unfair way which some Men take with themselves; who because of the Unconceivableness of something they find in one, throw themfelves violently into the contrary Hypothesis, tho' altogether as unintelligible to an unbiassed Understanding. This serves not only to show the Weakness and Scantiness of our Knowledge, but the infignificant Triumph of fuch fort of Arguments, which drawn from our own Views, may fatisfy us that we can field no Certainty on one fide of the Question; but do not at all thereby help us to Truth, by running into the opposite Opinion,

Opinion, which, on Examination, will be found clogged with equal Difficulties. For what Safety, what Advantage to any one is it, for the avoiding the feeming Absurdities, and, to him, unfurmountable Rubs he meets with in one Opinion, to take refuge in the contrary, which is built on fomething altogether as inexplicable, and as far remote from his Comprehension? 'Tis past Controversy, that we have in us something that thinks; our very Doubts about what it is, confirm the Certainty of its Being, tho' we must content our selves in the Ignorance of what kind of Being it is: And 'tis as vain to go about to be sceptical in this, as it is unreasonable in most other Cases to be positive against the Being of any Thing, because we cannot comprehend its Nature. For I would fain know what Substance exists that has not fomething in it, which manifestly baffles our Understandings. Other Spirits, who see and know the Nature and inward Constitution of Things, how much must they exceed us in Knowledge? To which if we add larger Comprehension, which enables them at one Glance to fee the Connexion and Agreement of very many *Ideas*, and readily supplies to them the intermediate Proofs, which we by fingle and flow Steps, and long poring in the Dark, hardly at last find out, and are often ready to forget one before we have hunted out another; we may guess at some Part of the Happiness of superior Ranks of Spirits, who have a quicker and more penetrating Sight, as well as a larger Field of Knowledge. But to return to the Argument in hand, our Knowledge, I fay, is not only limited to the Paucity and Imperfections of the Ideas we have, and which we employ it about, but even comes short of that too: But how far it reaches let us now enquire.

6. 7. The Affirmations or Negations we make concerning the *Ideas* we have, may, as I have before intimated in general, be reduced to these four sorts, viz. Identity, Co-existence, Polytion and real Evidence.

How far our Knowledge reaches.

Relation, and real Existence. I shall examine how far our

Knowledge extends in each of these.

6. 8. First, As to Identity and Diversity, in this way of the Agreement or Disagreement of our Ideas, our intuitive Knowledge is as far extended as our Ideas themselves; and there can be no Idea in the Mind, which it does not presently, by an intuitive Knowledge, perceive

First, our Knowledge of Lientity and Diversity, as far as our Ideas.

presently, by an intuitive Knowledge, perceive to be what it is, and to be different from any other.

6.9. Secondly, As to the second fort, which is the Agreement, or Differencement of our Ideas in Co-existence; in this our Knowledge is very short, the in the confils the greatest and most

Secondly, Of Co-existence a wer, listle was.

material part of our Knowledge concerning Substances. For

our *Ideas* of the Species of Substances, being, as I have shew'd, nothing but certain Collections of simple *Ideas* united in one Subject, and so co-existing together: v.g. Our *Idea* of *Flame* is a Body hot, luminous, and moving upward; of *Gold*, a Body heavy to a certain Degree, yellow, malleable, and sussible. These, or some such complex *Ideas* as these in Mens Minds, do these two Names of the different Substances, *Flame* and *Gold* stand for. When we would know any thing farther concerning these, or any other fort of Substances, what do we enquire but what other Qualities, or Powers, these Substances, have, or have not? Which is nothing else but to know, what other simple *Ideas* do, or do not co-exist with those that make up that complex *Idea*?

Because the Councilion between most simple Ideas is unknown. 6. 10. This, how weighty and confiderable a part foever of HumanScience, is yet very narrow, and scarce any at all. The Reason whereof is, that the simple *Ideas* whereof our complex *Ideas* of Substances, are made up, are, for the most part,

fuch as carry with 'em, in their own Nature, no visible necessary Connection, or Inconsistency with any other simple *Ideas*, whose *Co-existence* with 'em we would inform our selves about.

Especially of Secondary Qualities. S. 11. The *Ideas*, that our complex ones of Subflances are made up of, and about which our Knowledge, concerning Subflances is most employ'd, are those of their fecondary Qualities;

which depending all (as has been shewn) upon the primary Qualities of their minute and insensible Parts; or is not upon them, upon something yet more remote from our Comprehension, 'tis impossible we should know, which have a necessary Union or Inconsistency one with another: For not knowing the Root they spring from, not knowing what Size, Figure, and Texture of Parts they are, on which depend and from which result those Qualities which make our complex Idea of Gold, 'tis impossible we should know what other Qualities result from, or are incompatiable with the same Constitution of the insensible Parts of Gold; and so consequently must always co-exist with that complex Idea we have of it, or else are inconsistent with it.

Because all Connection betwoen any secondary and primary Qualities is undiscoverable. ©. 12. Besides this Ignorance of the primary Qualities of the insensible Parts of Bedies, on which depend all their secondary Qualities, there is yet another and more incurable part of Ignorance, which sets us more remote from a certain Knowledge of the Co-existence or Inco-existence (if I may so say) of different Ideas in the same Subject; and that is, that there is no

discoverable Connection between any secundary Quality, and those primary Qualities that it depends on.

6. 13.

Extent of Humane Knowledge.

6. 13. That the Size, Figure and Motion of one Body should cause a Change in the Size, Figure and Motion of another Body, is not beyond our Conception: the Separation of the Parts of one Body, upon the Intrusion of another; and the Change from Rest to Motion, upon impulse; these, and the like, feem to us to have some Connection one with another. And if we knew these primary Qualities of Bodies, we might have reason to hope we might be able to know a great deal more of these Operations of them one upon another: But our Minds not being able to discover any Connection betwixt these primary Qualities of Bodies, and the Sensations that are produced in us by them, we can never be able to establish certain and undoubted Rules, of the Consequence or Co-existence of any secondary Qualities, tho' we could discover the Size, Figure or Motion of those invisible Parts, which immediately produce 'em. We are fo far from knowing what Figure, Size or Motion of Parts produce a yellow Colour, a sweet Taste, or a sharp Sound, that we can by no means conceive how any Size, Figure or Motion of any Particles, can possibly produce in us the Idea of any Colour, Taste, or Sound whatsoever; there is no conceivable Connection betwixt the one and the other.

6. 14. In vain therefore shall we endeavour to discover by our Ideas, (the only true way of certain and universal Knowledge,) what other Ideas are to be found constantly joined with that of our complex Idea of any Substance; since we neither know the real Constitution of the minute Parts on which their Qualities do depend; nor, did we know them, could we discover any neceffary Connection between them, and any of the secondary Qualities: which is necessary to be done, before we can certainly know their necessary Co-existence. So that let our complex Idea of any Species of Substances, be what it will, we can hardly, from the simple Ideas contained in it, certainly determine the necessary Co-existence of any other Quality whatsoever. Our Knowledge in all these Enquiries, reaches very little farther than our Experience. Indeed fome few of the primary Qualities have a necessary Dependence, and visible Connection one with another, as Figure necessarily supposes Extension; receiving or communicating Motion by Impulse, supposes Solidity. But tho' these, and perhaps some others of our Ideas have, yet there are fo few of them, that have a visible Connection one with another, that we can by Intuition or Demonstration, discover the Coexistence of very few of the Qualities are to be found united in Substances; and we are left only to the Assistance of our Senses, to make known to us, what Qualities they contain. For of all the Qualities that are co-existent in any Subject, without this Dependence and evident Connection of their Ideas one with another, we cannot know certainly any two to co exist, any farther,

than

than Experience, by our Senses, informs us. Thus tho' we see the yellow Colour, and upon trial find the Weight, Malleable-ness, Fusibility, and Fixedness, that are united in a Piece of Gold; yet because no one of these Ideas has any evident Dependence, or necessary Connexion with the other, we cannot certainly know that where any four of these are, the fifth will be there also, how highly probable soever it maybe: Because the highest Probability amounts not to Certainty; without which there can be no true Knowledge. For this Co-existence can be no farther known, than it is perceived; and it cannot be perceived but either in particular Subjects, by the Observation of our Senses, or in general, by the necessary Connexion of the Ideas themselves.

Of Repugnancy to co-exist larger. 6.15. As to Incompatibility or Repugnancy to Coexistence, we may know, that any Subject can have of each fort of primary Qualities, but one particular at once, v. g. each particular Extension,

Figure, Number of Parts, Motion, excludes all other of each kind. The like also is certain of all sensible Ideas peculiar to each Sense; for whatever of each kind is present in any Subject, excludes all other of that fort; v.g. no one Subject can have two Smells, or two Colours at the fame time. To this, perhaps, will be Laid, has not an Opall, or the Infusion of Lignum Nephriticum, two Colours at the same time? To which I answer, that these Bodies, to Eyes differently placed, may at the same time afford different Colours: But I take Liberty also to say, that to Eyes differently placed, 'tis different Parts of the Object that reflect the Particles of Light: And therefore 'tis not the same part of the Object, and so not the very same Subject, which at the same time appears both yellow and azure. For 'tis as impossible that the very fame Particle of any Body, should at the same time differently modify or reflect the Rays of Light, as that it should have two different Figures and Textures at the same time.

Of the Coexistence of Powers a very little way. 6 16. But as to the Powers of Substances to change the fensible Qualities of other Bodies, which make a great part of our Enquiries about 'em, and is no inconsiderable Branch of our Knowledge; I doubt, as to these, whether our Knowledge.

ledge reaches much farther than our Experience; or whether we can come to the Discovery of most of these Powers, and be certain that they are in any Subject by the Connexion with any of those Ideas, which to us make its Essence. Because the active and passive Powers of Bodies, and their ways of operating, consisting in a Texture and Motion of Parts, which we cannot by any means come to discover: 'tis but in very sewCases, we can be able to perceive their Dependence on, or Repugnance to any of those Isleas, which make our complex one of that fort of Things. I have here instanced in the Corpuscularian Hypothesis,

thefis, as that which is thought to go farthest in an intelligible Explication of the Qualities of Bodies; and I fear the Weakness of Human Understanding isscarce able to substitute another, which will afford us a fuller and clearer Discovery of the necessary Connexion, and Co-existence of the Powers, which are to be obferved united in feveral forts of them. This at least is certain, that whichever Hypothesis be clearest and truest, (for of that it is not my Bufiness to determine) our Knowledge concerning corporeal Substances, will be very little advanced by any of them, tillwe are made to fee, what Qualities and Powers of Bodies have a necessary Connexion or Repugnancy one with another; which in the presentState of Philosophy, I think, we know but to a very finall degree: And, I doubt, whether with those Faculties we have, we shall ever be able to carry our general Knowledge (I fay not particular Experience) in this part much farther. Experience is that, which in this part we must depend on. And it were to be wished, that it were more improv'd. We find the Advantages fome Mens generous Pains have this way brought to the Stock of natural Knowledge. And if others, especially the Philosophers by Fire, who pretend to it, had been fo wary in their Observations, and sincere in their Reports, as those who call themselves Philosophers ought to have been ; our Acquaintance with the Bodies here about us, and our infight into their Powers and Operations, had been yet much greater.

Of Spirits potentials of the Powers and Operations of Bodies, I think it is eafy to conclude, we are much more in the dark set narrower. in reference to Spirits; whereof we naturally have no Ideas; but what we draw from that of our own, by reflecting on the Operations of our own Souls within us, as far as they can come within our Observation. But how inconsiderable a Rank the Spirits that inhabit our Bodies, hold amongst those various, and possibly innumerable, Kinds of nobler Beings; and how far short they come of the Endowments and Persections of Cherubims and Seraphims, and infinite forts of Spirits above us, is what, by a transfient Hint, in another Place, I have

offered to my Reader's Confideration.

6. 18. As to the third fort of our Knowledge, viz. the Agreement or Difagreement of any of our Ideas in any other Relation: This, as it is the largest Field of our Knowledge, so it is hard to determine how far it may extend: Because the

Thirdly, Of other Relations it is not easy to just how far,

Advances that are made in this part of Knowledge, depending on our Sagacity, in finding intermediate *Ideas*, that may show the *Relations* and *Habitudes* of *Ideas*, whose Co-existence is not considered, 'ris a hard Matter to tell, when we are at an end of such Discoveries; and when Reason has all the Helps it is ca-

pable

174 Extent of Humane Knowledge.

pable of, for the finding of Proofs, or examining the Agreement or Difagreement of remote *Ideas*. They that are ignorant of *Algebra*, cannot imagine the Wonders in this Kind are to be done by it; and what farther Improvements and Helps, advantageous to other Parts of Knowledge, the fagacious Mind of Man may yet find out, 'tis not eafy to determine. This at least I believe, that the *Ideas* of Quantity are not those alone that are capable of Demonstration and Knowledge; and that other, and perhaps more useful parts of Contemplation, would afford us Certainty, if Vices, Passions, and domineering Interest did not oppose, or menace such Endeavours.

Morality cafable of Demonstration.

The Idea of a supreme Being, infinite in Power, Goodness and Wisdom, whose Workmanship we are, and on whom we depend; and the Idea of our selves, as understanding rational Beings, be-

ing fuch as are clear in us, would, I suppose, if duly confidered and purfued, afford fuch Foundations of our Duty and Rules of Action, as might place Morality among st the Sciences capable of Demonstration: wherein I doubt not, but from felf-evident Propositions, by necessary Consequences, as incontestable as those in Mathematicks, the Measures of Right and Wrong might be made out, to any one that will apply himself with the same Indifferency and Attention to the one, as he does to the other of these Sciences. The Relation of other Modes may certainly be perceived, as well as those of Number and Extension: And I cannot fee why they should not also be capable of Demonstration, if due Methods were thought on to examine, or pursue their Agreement or Disagreement. Where there is no Property, there is no Injustice, is a Proposition as certain as any Demonfiration in Euclid: For the Idea of Property, being a Right to any thing; and the Idea to which the Name Injustice is given, being the Invafion or Violation of that Right; it is evident, that these Ideas being thus established, and these Names annexed to them, I can as certainly know this Proposition to be true, as that a Triangle has three Angles equal to two Right ones. Again, No Government allows abjelute Liberty: The Idea of Government being the Establishment of Society upon certain Rules or Laws, which require Conformity to them; and the Idea of absolute Liberty being for any one to do whatever he pleases; I am as capable of being certain of the Truth of this Proposition, as of any in the Mathematicks.

Two Things have made moral Ideas thought uncapable of Demonstration. Their Complexedness, and avant of sensible Representations.

6. 19. That which in this refpect has given the Advantage to the *Ideas* of Quantity, and made 'em thought more capable of Corrainty and Demonstration, is,

First, That they can be fet down and

represented

represented by sensible Marks, which have a greater and nearer Correspondence with them than any Words or Sounds whatsoever. Diagrams drawn on Paper are Copies of the Ideas in the Mind, and not liable to the Uncertainty that Words carry in their Signification. An Angle, Circle, or Square, drawn in Lines, lies open to the View, and cannot be mistaken: It remains unchangeable, and may at leisure be considered and examined, and the Demonstration be revised, and all the Parts of it may be gone over more than once, without any Danger of the least Change in the Ideas. This cannot be thus done in moral Ideas, we have no sensible Marks that resemble them, whereby we can set them down; we have nothing but Words to express them by; which tho', when written, they remain the same, yet the Ideas they stand for, may change in the same Man; and 'tis very seldom that they are not different in different Persons.

Secondly, Another thing that makes the greater Difficulty in Ethicks, is, That moral Ideas are commonly more complex than those of the Figures ordinarily considered in Mathematicks. From whence these two Inconveniencies follow. First, That their Names are of more uncertain Signification, the precife Collection of fimple Ideas they fland for not being fo eafily agreed on, and fo the Sign that is used for them in Communication always, and in Thinking often, does not fleddily carry with it the fame Idea. Upon which the same Disorder, Confusion and Error follows, as would if a Man, going to demonstrate something of an Heptagon, should in the Diagram he took to do it, leave out one of the Angles, or by over-fight make the Figure with one Angle more than the Name ordinarily imported, or he intended it should, when atfirsthe thought of his Demonstration. This oftenhappens, and is hardly avoidable in very complex moral Ideas, where the same Name being retained, one Angle, i.e. one simple Idea, is left out or put in, in the complex one, (flill call'd by the fame Name) more at one time than another. Secondly, From the Complexedness of these moral Ideas there follows another Inconvenience, (viz.) that the Mind cannot eafily retain those precise Combinations, so exactly and perfectly, as is necessary in the Examination of the Habitudes and Correspondencies, Agreements or Disagreements, of several of them one with another; especially where it is to be judged of by long Deductions, and the Intervention of several other complex Ideas, to shew the Agreement or Disagreement of two remote ones.

The greatHelpagaintt this, which Mathematicians find in Diagrams and Figures, which remain unalterable in their Draughts, is very apparent, and the Memory would often have great Difficulty otherwise to retain them so exactly, whilst the Mind went over the Farts of them, Step by Step, to examine their several Correspondencies: And the in casting up a long Sum, either

in Addition, Multiplication, or Division, every part be only. a Progression of the Mind, taking a view of its own Ideas, and confidering their Agreement or Disagreement; and the Resolution of the Question be nothing but the Result of the whole, made up of fuch Particulars, whereof the Mind has a clear Perception; yet without fetting down the feveral Parts by Marks, whose precise Significations are known, and by Marks, that last and remain in view when the Memory had let them go, it would be almost impossible to carry so many different Ideas in Mind, without confounding, or letting flip fome Parts of the Reckoning, and thereby making all our Reasonings about it useless. In which Case, the Cyphers or Marks help not the Mind at all to perceive the Agreement of any two, or more Numbers, their Equalities or Proportions: That the Mind has only by Intuition of its own Ideas of the Numbers themselves. But the numerical Characters are helps to the Memory, to record and retain the feveral Ideas about which the Demonstration is made, whereby a Man may know how far his intuitive Knowledge, in surveying several of the Particulars, has proceeded; that fo he may, without Confusion, go on to what is yet unknown, and, at last, have in one View before him the Refult of all his Perceptions and Reasonings.

Remedies of those Difficulties.

6. 20. One part of these Disadvantages in moral Ideas, which has made them be thought not capable of Temonstration, may in a good meafure be remedied by Definitions, fetting down that

Collection of fimple Ideas, which every Term shall stand for, and then using the Terms steadily and constantly for that precife Collection. And what Methods Aigebra, or fomething of that kind, may hereafter fuggest, to remove the other Difficulties, is not easy to foretel. Confident I am, that if Men would in the same Method, and with the same Indifferency, search after moral, as they do Mathematical Truths, they would find 'em to have a stronger Connexion one with another, and a more necessary Consequence from our clear and distinct Ideas, and to come nearer perfect Demonstration, than is commonly imagined. But much of this is not to be expected, whilst the defire of Esteem, Riches, or Power, makes Men espouse the well endowed Opinions in Fashion, and then seek Arguments, either to make good their Beauty, or varnish over and cover their Nothing being so beautiful to the Eye, as Truth Deformity. is to the Mind; nothing so deformed and irreconcilable to the Understanding, as a Lye. For the' many a Man can with Satisfaction enough own a no very handsome Wife in his Bosom; yet who is bold enough openly to avow, that he has espous'd a Falshood, and received into his Breast so ugly a thing as a Lye? Whilst the Parties of Men, cram their Tenets down all

Mens Throats, whom they can get into their Power, without permitting them to examine their Truth or Falshood, and will not let Truth have fair play in the World, nor Men the Liberty to fearch after it; What Improvements can be expected of this kind? What greater Light can be hoped for in the moral Sciences? The subject part of Mankind, in most Places, might, instead thereof, with Agyptian Bondage, expect Ægyptian Darkness, were not the Candle of the Lord fet up by himself in Mens Minds, which it is impossible for the Breath or Power of Man wholly to extinguish.

6. 21. As to the fourth fort of our Knowledge, viz. of the real actual Existence of Things, we have an intuitive Knowledge of our own Existence; a demonstrative Knowledge of the Existence of a God; of the Existence of any thing elfe, we have no other but a fensitive Knowledge, which extends not beyond the

Objects present to our Senses.

6. 22. Our Knowledge being so narrow, as I have shewed, it will, perhaps, give us some Light into the present State of our Minds, if we look a little into the dark fide, and take a view of our Ignorance; which being infinitely

Fourtbly, Of real Existence αvε have an in∙ tuitive Knows. ledge of our own; Demonstrative cf God's; senfible of some jew other Trings.

Our Ignorance great.

larger than our Knowledge, may serve much to the quieting of Disputes, and Improvement of useful Knowledge; if discovering how far we have clear and distinct Ideas, we confine our Thoughts within the Contemplation of those Things, that are within the reach of our Understandings, and launch not out into that Abyss of Darkness (where we have not Eyes to see, nor Faculties to perceive any thing,) out of a Prefumption, that nothing is beyond our Comprehension. But to be fatisfy'd of the Folly of fuch a Corceit, we need not go far. He that knows any thing, knows this in the first place, that he need not feek long for Instances of his Ignorance. The meanest and most obvious Things that come in our way, have dark fides, that the quickest Sight, cannot penetrate into. The clearest and most enlarged Understandings of thinking Men, find themselves puzzled, and at a loss, in every particle of Matter. We shall the less wonder to find it fo, when we confider the Causes of our Ignorance, which from what has been faid, I suppose, will be found to be chiefly these three:

First, Want of Ideas.

Secondly, Want of a discoverable Connection between the Ideas we have.

Thirdly, Want of tracing and examining our Ideas. Vol. II.

First, One Cause of it, want of Ideas, either such as we have no Conception of, or such as particularly we have not

6. 23. First, There are some Things, and those not a few, that we are ignorant of for want of Ideas.

First, All the simple Ideas we have are confined (as I have shewn) to those we receive from corporeal Objects by Sensation, and from the Operations of our own Minds as the Objects of Rescetion. But how much these sew and narrow Inlets are disproportionate to the vast whole

Extent of all Beings, will not be hard to perfuade those who are not so foolish as to think their Span the Measure of all Things. What other simple Ideas 'tis possible the Creatures in other Parts of the Universe may have, by the Assistance of Senses and Faculties more or perfecter, than we have, or different from ours, 'tis not for us to determine: But to fay or think there are no fuch, because we conceive nothing of 'em, is no better an Argument, than if a blind Man should be pofitive in it, that there was no fuch thing as Sight and Colours, because he had no manner of Idea of any such thing, nor could by any means frame to himfelf any Notions about Seeing. The Ignorance and Darkness that is in us, no more hinders nor confines the Knowledge that is in others, than the Blindness of a Mole is an Argument against the Quick fightedness of an Eagle. He that will confider the infinite Power, Wifdom, and Goodness of the Creator of all Things, will find Reason to think it was not all laid out upon so inconsiderable, mean and impotent a Creature, as he will find Man to be; who in all probability, is one of the lowest of all intellectual Beings. What Faculties therefore other Species of Creatures have to penetrate into the Nature and inmost Constitutions of Things; what Ideas they may receive of them, far different from ours, we know not. This we know, and certainly find, that we want feveral other Views of them, befides those we have, to make Discoveries of them more perfect. And we may be convinced that the Ideas, we can attain to by our Faculties, are very disproportionate to Things themselves, when a positive clear distinct one of Substance it felf, which is the Foundation of all the rest, is concealed from us. But want of Ideas of this kind being a Part as well as Caufe of our Ignorance, cannot be described. Only this, I think, I may confidently say of it, that the intellectual and sensible World, are in this perfectly alike; That that part, which we fee of either of them, holds no Proportion with what we fee not; and what foever w can reach with our Eyes, or our Thoughts of either of them, is but a Point, almost nothing, in Comparison of the rest.

Because of their Remotews: cr, Secondly, Another great Cause of Ignorance, is the want of Ideas we are capable of. As the want of Ideas, which our Faculties

are not able to give us, shuts us wholly from those vi and a Things which 'tis reasonable to think other Beings, perfected than we, have, of which we know nothing; fo the want of Ideas, I now speak of, keeps us in Ignorance of Things we conceive capable of being known to us. Bulk, Figure, and Mosion, we have Ideas of. But tho' we are not without Ideas of thefo primary Qualities of Bodies in general, yet not knowing what is the particular Bulk, Figure and Morion, of the greatest part of the Bodies of the Universe, we are ignorant of the several Powers, Efficacies and Ways of Operation, whereby the Effects, which we daily fee, are produced. These are hid from us in fome Things, by being too remote; and in others by being too minute. When we confider the vast Distance of the known and visible parts of the World, and the Reasons we have to think, that what lies within our Ken, is but a finall part of the immense Universe, we shall then discover an huge Abyss of Ignorance. What are the particular Fabricas of the great Masses of Matter, which make up the whole stupendious Frame of Corporeal Beings; how far they are entended, what is their Motion, and how continued, or communicated; and what Influence they have one upon another, are Contemplations, that at first Glimpse our Thoughts love themselves in. If we narrow our Contemplation, and confine our Thoughts to this little Canton, I mean this System of our Sun, and the groffer Maffes of Matter, that vifibly move about it, what feveral forts of Vegetables, Animals, and intellectual corporeal Beings, infinitely different from those of our little spot of Earth, may there probably be in the other Planets, to the Knowledge of which, even of their outward Figures and Parts. we can no way attain, whilft we are confined to this Earth, there being no natural Means, either by Senfation or Reflection, to convey their certain Ideas into our Minds? They are out of the reach of thoseInlets of all ourKnowledge; and what forts of Furniture and Inhabitants those Mansions contain in them, we cannot fo much asguess, much less have clear and diffinct Ideas of 'em.

of 25. If a great, nay far the greatest part of the several Ranks of Bodies in the Universe, efcape our Notice by their Remoteness, there are others that are no less concealed from us by their Minuteness. These insensible Corpuscles, being the active Parts of Matter, and the great Instruments of Nature, on which depend not only all their secondary Qualities, but also most of their natural Operations, our want of precise diffinest Ide. s of their primary Qualities, keeps us in an incurable Ignorance of what we desire to know about them. I doubt not but if we could discover the Figure, Size, Texture, and Motion of the minute Constituent Parts of any two Podies, we stoud know

a without

without Trial feveral of their Operations one upon another, as we do now the Properties of a Square, or a Triangle. Did we know the mechanical Affections of the Particles of Rhubarb, Hemleck, Opium, and a Man, as a Watchmaker does those of a Watch, whereby it performs its Operations, and of a File which by rubbing on them will alter the Figure of any of the Wheels, we flould be able to tell beforehand, that Rhubarb will purge, Hemlock kill, and Opium make a Man fleep, as well as a Watchmaker can, that a little piece of Paper laid on the Balance will keep the Watch from going, till it be removed; or that some small part of it, being rubbed by a File, the Machine would quite lose its Motion, and the Watch go no more. The diffolving of Silver in Aqua Fortis, and Gold in Aqua Regia, and not Vice Versa, would be then perhaps no more difficult to know, than it is to a Smith to understand why the turning of one Kev will open a Lock, and not the turning of another. But whilst we are destitute of Senses acute enough to discover the minute Particles of Bodies, and to give us Ideas of their mechanical Affections, we must be content to be ignorant of their Properties and ways of Operation; nor can we be affured about them any farther than fome few Trials we make are able to reach. But whether they will fucceed again another time, we cannot be certain. This hinders our certain Knowledge of univerfal Truths concerning natural Bodies; and our Reason carries us herein very little beyond particular Matter of Fact.

6. 26. And therefore I am apt to doubt, that Hence no how far foever Humane Industry may advance Science of useful and experimental Philosophy in thysical Budies. things, scientifical will still be out of our reach; because we want perfect and adequate Ideas of those very Bodies, which are nearest to us, and most under our command. Those which we have ranked into Classes under Names, and we think ourselves best acquainted with, we have but very imperfect and incompleat Ideas of. Distinct Ideas of the several forts of Bodics, that fall under the Examination of our Senses, perhaps, we may have; but adequate Ideas, I suspect, we have not of any one amongst them. And tho' the former of these will serve us for common Use and Discourse, yet whill we want the latter, we are not capable of scientifical Isnozeledee; nor shall ever be able to discover general, instru-Etive, unquestionable Truths concerning them. Certainty and Demonstration, are Things we must not, in these Matters, pretend to. By the Colour, Figure, Tafte and Smell, and other fenfible Qualities, we have as clear and diffinct Ideas of Sage and Hemlock, as we have of a Circle and a Triangle: But having no Ideas of the particular primary Qualities of the minute Parks of either of these Plants, nor of other Bodies which we would

would apply them to, we cannot tell what Effects they will produce; nor when we see those Essects can we so much as guess, much less know, their manner of Production. Thus having no Ideas of the particular mechanical Affections of the minute Parts of Bodies, that are within our view and reach, we are ignorant of their Constitutions, Powers, and Operations: and of Bodies more remote, we are yet more ignorant, not knowing fo much as their very outward Shapes, or the fenfible and groffer Parts of their Constitutions.

6. 27. This, at first Sight, will shew us how dif-Much 1.5 proportionate our Knowledge is to the whole exof Spirits. tent even of material Beings; to which, if we add the Confideration of that infinite Number of Spirits that may be, and probably are, which are yet more remote from our Knowledge, whereof we have no Cognizance, nor can frame to our felves any distinct Ideas of their feveral ranks and forts, we shall find this Cause of Ignorance conceal from us, in an impenetrable Obscurity, almost the whole intellectual World; a greater certainly, and more beautiful World than the material. For bating fome very few, and those, if I may fo call them, fuperficial Ideas, of Spirit, which by Reflection we get of our own, and from thence, the best we can collect, of the Father of all Spirits, the eternal independent Author of 'em and us, and all Things; we have no certain Information, fo much as of the Existence of other Spirits, but by Revelation. Angels of all forts are naturally beyond our Difcovery: And all those Intelligences, whereof 'ris likely there are more Orders than of corporcal Substances, are Things whereof our natural Faculties give us no certain Account at all. That there are Minds, and thinking Beings in other Men as well as himfelf, every Man has a Reason, from their Words and Actions, to be satisfied: And the Knowledge of his own Mind cannot suffer a Man, that confiders, to be ignorant, that there is a GOD. But that there are Degrees of Spiritual Beings between us and the great GOD, who is there, that by his own Search and Ability can come to know? Much less have we distinct Ideas of their different Natures, Conditions, States, Powers, and feveral Conflitutions, wherein they agree or differ from one another, and from us. And therefore in what concerns their different Species and Properties, we are under an absolute Ignorance.

6. 28. Secondly, What a small part of the Subflantial Beings, that are in the Universe, the want of Ideas leave open to our Knowledge, we have feen. In the next place, another Caule of Ignorance, of no less Moment, is a want of a difcoverable Connection between those Ideas we have. For wherever we want that, we are utterly uncapable of

Secondia. Want of a A.S. corrable Conne Tion between Ideas ave bave.

univerfal

univerfal and certain Knowledge; and are, as in the former Case, left only to Observation and Experiment; which, how narrow and confined it is, how far from general Knowledge. we need not be told. I shall give some few Instances of this cause of our Ignorance, and so leave it. 'Tis evident that the Bulk, Figure and Motion of feveral Bodies about us, produce in us feveral Senfations, as of Colours, Sounds, Taftes, Smells, Pleasure and Pain, &c. These mechanical Affections of Bodies, having no Affinity at all with those Ideas they produce in us, (there being no conceivable Connection between any impulse of any fort of Body, and any Perception of a Colour or Smell, which we find in our Minds) we can have no diflinct Knowledge of fuch Operations beyond our Experience; and can reason no otherwise about them, than as Effects produced by the appointment of an infinitely Wife Agent, which perfectly surpass our Comprehensions. As the Ideas of sensible fecondary Qualities, which we have in our Minds, can, by us be no way deduc'd from bodily Caufes, nor any Correspondence or Connection be found between them and those primary Qualities which (Experience shews us) produce them in us; so on the other fide, the Operation of our Minds upon our Bodies is as unconceivable. How any Thought should produce a Motion in Body, is as remote from the Nature of our Ideas, as how any Body should produce any Thought in the Mind. That it is so. if Experience did not convince us, the Confideration of the Things themselves would never be able, in the least, to discover to us. These, and the like, tho' they have a constant and regular Connection, in the ordinary course of Things; yet that Connection being not discoverable in the Ideas themselves, which appearing to have no necessary dependance one on another, we can attribute their Connection to nothing elfe, but the arbitrary Determination of that All wife Agent, who has made em to be, and to operate as they do, in a way wholly above our weak Understandings to conceive.

6. 29. In some of our Ideas there are certain Relations, Habitudes and Connections, fo visibly included in the Nature of the Ideas themselves, that we cannot conceive 'em separable from 'em, by any Power whatsoever. And in these only, we are capable of certain and univerfal Knowledge. Thus the Idea of a right-lined Triangle necessarily carries with it an Equality of its Angles to two right oncs. Nor can we conceive this Relation, this Connection of these reco Ideas, to be possibly mutable, or to depend on any arbitrary Power, which of choice made it thus, or could make it otherwife. But the Coherence and Continuity of the Parts of Matter; the Production of Sensation in us of Colours and Sounds, &c. by Impulse and Motion; nay, the original Rules

and Communication of Motion being fuch, wherein we can difcover no natural Connection with any Ideas we have, we cannot but ascribe 'em to the arbitrary Will and good Pleasure of the wife Architect. I need not, I think, here mention the Refurrection of the Dead, the future State of this Globe of Earth, and fuch other Things, which are by every one acknowledged to depend wholly on the Determination of a free Agent. The Things that, as far as our Observation reaches, we constantly find to proceed regularly, we may conclude, do act by a Law fet 'em; but yet by a Law that we know not: Whereby, tho' Causes work steadily, and Effects constantly flow from them, yet their Connections and Dependencies being not discoverable in our Ideas, we can have but an experimental Knowledge of 'em. From all which it is eafy to perceive, what a Darkness we are involved in, how little 'tis of Being, and the things that are, that we are capable to know. And therefore we shall do no Injury to our Knowledge when we modefuly think with our felves, that we are so far from being able to comprehend the whole Nature of the Universe, and all the things, contained in it, that we are not capable of a Philosophical Knowledge of the Bodies that are about us, and make a part of us: Concerning their fecondary Qualities, Powers and Operations, we can have no universal Certainty. Several Estects come every Day within the Notice of our Senses, of which we have so far sensitive Knowledge: But the Causes, Manner and Certainty of their Production, for the two foregoing Reasons, we must be content to be ignorant of. In these we can go no farther than particular Experience informs us of matter of Fact, and by Analogy to guess what Effects the like Bodies are, upon other Trials, like to produce. But as to a perfect Science of natural Bodies, (not to mention spiritual Beings) we are, I think, so far from being capable of any fuch thing, that I conclude it lost labour to feek after it.

6. 30. Thirdly, Where we have adequate I-deas, and where there is a certain and discoverable Connection between them, yet we are often ignorant, for want of tracing those Ideas which

Thirdly, want of tracing our Ideas.

we have, or may have; and for want of finding out those intermediate *Ideas*, which may shew us, what Habitude of Agreement or Disagreement they have one with another. And thus many are ignorant of mathematical Truths, not out of any impersection of their Faculties, or Uncertainty in the Things themselves, but for want of Application in acquiring, examining, and by due ways comparing those *Ideas*. That which has most contributed to hinder the due tracing of our *Ideas*, and finding out their Relations, and Agreements or Disagreements one with another, has been, I suppose, the ill use of Words. It is impossible that Men should ever truly seek, or certainly discover

the

184 Extent of Humane Knowledge.

the Agreement or Disagreement of Ideas themselves, whilst their Thoughts flutter about, or slick only in Sounds of doubtful and uncertain Significations. Mathematicians abstracting their Thoughts from Names, and accustoming themselves to set before their Minds the Ideas themselves that they would confider, and not Sounds instead of them, have avoided thereby a great part of that Perplexity, Puddering and Confufion, which has so much hindred Mens Progress in other Parts of Knowledge. For whilft they flick in Words of undetermined and uncerrain Signification, they are unable to diffinguish True from False, Certain from Probable, Consistent from Inconsiflent, in their ownOpinions. This having been the Fate or Misfortune of a great part of the Men of Letters, the Increase brought into the Stock of real Knowledge, has been very little, in Proportion to the Schools, Difputes and Writings, the World has been filled with; whilst Students, being lost in the great Wood of Words, knew not whereabout they were, how far their Discoveries were advanced, or what was wanting in their own, or the general Stock of Knowledge. Had Men, in the Discoveries of the material, done as they have in those of the intellectual World, involved all in the Obscurity of uncertain and doubtful ways of talking, Volumes writ of Navigation and Voyages, Theories and Stories of Zones and Tydes, multiplied and disputed; nay, Ships built, and Fleets set out, would never have taught us the way beyond the Line; and the Antipodes would be still as much unknown, as when it was declared Herefy to hold there were any. But having spoken sufficiently of Words, and the ill or careless use that is commonly made of them, I shall not say any thing more of it here.

Extent in refreed of Unicerfality.

6. 31. Hitherto we have examined the Extent of our Knowledge, in respect of the several sorts of Beings that are. There is another Extent of it, in respect of Universality, which will also de-

versality. it, in respect of Universality, which will also deferve to be confidered; and in this regard, our Knowledge follows the Nature of our Ideas. If the Ideas are abstract, whose Agreement or Difagreement we perceive, our Knowledge is universal. For what is known of such general Ideas, will be true of every particular thing, in whom that Effence, i.e. that ab-Aract Idea is to be found: and what is once known of fuch Ideas, will be perpetually and for ever true. So that as to all general Knowledge, we must search and find it only in our own Minds, and 'tis only the examining of our own Ideas that furnisheth us with that. Truths belonging to Essences of Things, (that is, to abseract Ideas) are eternal, and are to be found out by the Contemplation only of those Essences; as the Existence of Things is to be known only from Experience. But having more to fay of this in the Chapters where I shall speak of general and real Knowledge, this may here suffice as to the Universality of our Knowledge in general. CHAP.

CHAP. IV.

Of the Reality of Knowledge.

6. I. Doubt not but my Reader by this time maybe apt to think, that I have been all this while only building a Castle in the Air; and be ready to say to me, To what purpose all this Stir? Knowledge, say you, is only the Perception of the Agreement or Disagree-

Objection.
Knowledge placed in Ideas,
may be all bare
Vision.

the Perception of the Agreement or Disagreement of our own Ideas: but who knows what those Ideas may be? Is there any thing so extravagant, as the Imaginations of Mens Brains? Where is the Head that has no Chin.cra's in it? Or if there be a fober and a wife Man, what difference will there be, by your Rules, between his Knowledge, and that of the most extravagant Fancy in the World? They both have their Ideas, and perceive their Agreement and Disagreement one with another. If there be any difference between them, the Advantage will be on the warm-headed Man's fide, as having the more Ideas, and the more lively. And fo, by your Rules, he will be the more knowing. If it be true, that all Knowledge lies only in the Perception of the Agreement or Difagreement of our own Ideas, the Visions of an Enthusiast, and the Reafonings of a fober Man, will be equally certain. Tis no matter how Things are; fo a Man observe but the Agreement of his own Imaginations, and talk conformably, it is all Truth, all Certainty. Such Castles in the Air, will be as strong Holds of Truth, as the Demonstrations of Euclid. That an Harpy is not a Centaur, is by this way as certain Knowledge, and as much a Truth, as that a Square is not a Circle.

But of what we is all this fine Knowledge of Mens own Imaginations, to a Man that enquires after the Reality of Things? It matters not what Mens Fancies are, 'ris the Knowledge of Things that is only to be prized: 'tis this alone gives a Value to our Reasonings, and Preference to one Man's Knowledge over another's, that it is of Things as they really

are, and not of Dreams and Fancies.

6. 2. To which I answer, That if our Knowledge of our *Licas* terminate in them, and reach no farther, where there is something farther intended, our most serious Thoughts will be of little more use, than the Reveries of a crazy

Answer, Not f), subere Ideas ogree with Things.

Brain; and the Truths built thereon of no more weight, than the Discourses of a Man, who sees Things clearly in a Dream, and with great Assurance utters them. But, I hope, before I have done, to make it evident, that this way of Certainty, by the Knowledge of our own Ideas goes a little farther than bare

Imagination;

Imagination; and, I believe it will appear, that all the Certainty of general Truths a Man has, lies in nothing else.

Answer. Not for immediately, but only by the Intervention of the Ideas it has of 'em. Our Knowledge therefore is real, only so far as there is a Conformity between our Ideas and the Reality of Things.

But what shall be here the Criterion? How shall the Mind, when it perceives nothing but its own *Ideas*, know that they agree with Things themselves? This, tho' it seems not to want Dissibility, yet I think there be two forts of *Ideas*, that,

we may be affured, agree with Things.

6. 4. First, The first are simple Ideas, which As. Firft, fince the Mind, as has been shewed, can by no All Ample means make to it felf, must necessarily be the Lucas do. Product of Things operating on the Mind in a natural way, and producing therein those Perceptions which by the Wisdom and Will of our Maker they are ordained and adapted to. From whence it follows, that simple Ideas are not Fictions of our Fancies, but the natural and regular Productions of Things without us, really operating upon us; and so carry with them all the Conformity which is intended; or which our State requires: For they represent to us Things under those Appearances which they are fitted to produce in us; whereby we are enabled to diffinguish the forts of particular Substances, to differn the States they are in, and fo to take 'em for our Necessities, and apply them to our Uses. Thus the Idea of Whiteness, or Bitterness, as it is in the Mind, exactly answering that Power which is in any Bod, to produce it there, has all the real Conformity it can, or ought to have, with Things without us. And this Conformity between our simple Ideas, and the Liviliance of Things, is fufficient for real Knowledge.

Secondly, All our complex Ideas, except the complex I deas, except the comp

as y Confermity need forly to real Knowledge. For that which is not deficed to represent any thing but it felf, can never be capable of a wrong Representation, nor mislead us from the true Apprehension of any thing, by its Dislikeness to it: and such, excepting chole of Substances, are all our complex Ideas. Which, as I have snew'd in another Place, are Combinations of Ideas, which the Mind, by its free Choice, puts together, withour considering any Connection they have in Nature. And her ce it is, that in all these forts the Ideas themselves are considered as the Archestypes, and Things no otherwise regarded

but

but as they are conformable to them. So that we cannot but be infallibly certain, that all the Knowledge we attain concerning these *Ideas* is real, and reaches Things themselves. Because in all our Thoughts, Reasonings, and Discourses of this kind, we intend Things no farther, than as they are conformable to our *Ideas*. So that in these we cannot miss of a certain and undoubted Reality.

6. 6. I doubt not but it will be easily granted, that the Knowledge we have of Mathematical Truths, is not only certain, but real Knowledge; and not the bare empty Vision of vain infignificant Chimeras of the Brain: And yet, if we will confider, we shall find that it is only of our own Ideas. The Mathematician considers

Hence the Reality of Mathematical Knowledge.

our own Ideas. The Mathematician confiders the Truth and Properties belonging to a Rectangle or Circle, only as they are in Idea in his own Mind. For 'tis possible he never found either of 'em existing mathematically, i.e. precisely true in his Life. But yet the Knowledge he has of any Truths or Properties belonging to a Circle, or any other mathematical Figure, are nevertheless true and certain, even of real Things existing: because real Things are no farther concerned, nor intended to be meant by any fuch Propositions, than as Things really agree to those Archetypes in his Mind Is it true of the Idea of a Trien le, that its three Angles are equal to two right ones? It is true of a Triangle also, wherever it really exists. Whatever other Figure exists, that is not exactly answerable to that Idea of a Triangle in his Mind, is not at all concerned in that Proposition. And therefore he is certain all his Knowledge concerning fuch Ideas, is real Knowledge; because intending Things no farther than they agree with those his Ideas, he is sure what he knows concerning those Figures, when they have barely an ideal Existence in his Mind, will hold true of them also, when they have a real Exidence in Matter; his Confideration being barely of those Figures, which are the same, wherever, or however they exist.

6.7. And hence it follows, that moral Know- And of Moral. ledge is as capable of real Certainty, as Mathematicks. For Certainty being but the Perception of the Agreement or Diffagreement of our Ideas; and Demonstration nothing but the Perception of such Agreement, by the Intervention of other Ideas, or Mediums, our meral Ideas, as well as mathematical, being Archetypes themselves, and so adequate, and complete Ideas; all the Agreement or Diffagreement, which we shall find in them, will produce real Knowledge, as well as in Mathematical Figures.

6. 8. For the attaining of Knowledge and Certainty it is requifite, that we have determined Ideas: and to make our Knowledge real, it is

Existence not required to make it real.

requifite,

requifite, that the Ideas answer their Archery pes. Nor let it be wondered, that I place the Certainty of our Knowledge in the Confideration of our Ideas, with so little Care and Regard (as it may feem) to the real Existence of Things: Since most of those Discourses, which take up the Thoughts, and engage the Disputes of those who pretend to make it their Business to enquire after Truth and Certainty, will, I prefume, upon Examination, be found to be general Propositions, and Notions in which Existence is not at all concerned. All the Discourses of the Mathematicians, about the squaring of a Circle, conick S. Hions, or any other part of Mathematicks, concern not the Existence of any of those Figures, but their Demonstrations, which depend on their Ideas, are the same, whether there be any Square or Circle existing in the World, or no. In the same manner, the Truth and Certainty of moral Discourses abstracts from the Lives of Men, and the Existence of those Virtues in the World, whereof they treat; nor are Tully's Offices less true, because there is no Body in the World that exactly practifes his Rules, and lives up to that Pattern of a virtuous Man, which he has given us, and which existed no where, when he writ, but in Idea. If it be true in Speculation, i.e. in Idea, that Murder deserves Death, it will also be true in Reality of any Action that exists conformable to that Idea of Murder. As for other A Stions, the Truth of that Proposition concerns them not. And thus it is of all other Species of Things, which have no other Effences, but those Ideas which are in the Minds of Men.

The will it be I is true or certain, because troughthers are of our over that any and naming. 6. 9. But it will here be faid, that if moral Knowledge be placed in the Contemplation of our own moral Lieas, and those, as other Modes, be of our own making, What strange Notions will there be of Justice and Temperance? What Confusion of Virtues and Vices, if every one may make what Lieas of them he pleases? No Confusion cor Disorder in the Things themselves, nor

the Reasonings about them; no more than (in Mathematicks) there would be a Didurbance in the Demonstration, or a change in the Properties of Figures, and their Relations one to another, if a Man should make a Triangle with sour Corners, or a Tropy with sour right Angles; that is, in plain English, choose the Names of the Figures, and call that by one Name, which Mathematicians called ordinarily by another. For let a Min make to himself the Idea of a Figure with three Angles, whereof one is a right one, and call it, if he please, Equilation, or Tropesium, or any thing else, the Properties of, and Demonstrations about that Idea, will be the same, as if he called it a Restangular Triangle. I confess, the Change of the Name, by the Impropriety of Speech, will at first disturb him.

who knows not what Idea it stands for: But as soon as the Figure is drawn, the Confequences and Demonstration are plain and clear. Just the same is it in moral Knowledge, let a Man have the Idea of taking from others, without their Confent, what their honest Industry has possessed them of, and call this Justice, if he please. He that takes the Name here without the Idea put to it, will be mistaken, by joining another Idea of his own to that Name: But strip the Idea of that Name, or take it fuch as it is in the Speaker's Mind, and the fame Things will agree to it, as if you called it Injustice. Indeed, wrong Names in moral Discourses, breed usualiv more diforder, because they are not so easily rectified as in Mathematicks, where the Figure once drawn and feen, makes the Name useless and of no Force. For what need of a Sign, when the thing fignified is present and in view? But in moral Names, that cannot be so easily and shortly done, because of the many Decompositions that go to the making up the complex Ideas of those Modes. But yet for all the miscalling of any of those Ideas, contrary to the usual Signification of the Words of that Language, hinders not, but that we may have certain and demonstrative Knowledge of their several Agreements and Disagreements, if we will carefully, as in Mathematicks, keep to the same precise Ideas, and trace them in their several Relations one to another, without being led away by their Names. If we but separate the Idea under Consideration from the Sign that stands for it, our Knowledge goes equally on in the Discovery of real Truth and Certainty, whatever Sounds we make use of.

6. 10. One thing more we are to take Notice Eil-naming of, That where GOD, or any other Law-maker, diffarbs not the hath defined any Moral Names, there they have Certaint; of the made the Essence of that Species to which that Knozvleáze. Name belongs; and there it is not fafe to apply or use them otherwise: But in other Cases' ris bare Impropriety of Speech to apply them contrary to the common usage of the Country. But yet even this too disturbs not the Certainty of that Knowledge, which is fill to be had by a due Contemplation and comparing of those even nick-named Lieus.

to be found united in the Things themselves: From whene

6. 11. Thirdly, There is another fort of complex Ideas, which being referred to Archerytes without us, may differ from them, and fo our Knowledge about them, may come fhort of being real. Such are our Ideas of Subfrances, which confifting of a Collection of simple Ideas, supposed taken from the Works of Nature, may yet very from there. by having more or different Ideas united in them, than are

IC as of Calr' de Archerja

it comes to pass, that they may, and often do fail of being exactly conformable to Things themselves.

So far as they agree with those, fo far our Knowledge concerning them is real. 6. 12. I fay then, that to have *Ideas* of *Sub-flances*, which by being conformable to Things, may afford us *real Knowledge*, it is not enough, as in Modes, to put together fuch *Ideas* as have no Inconfiftence, tho' they did never before fo exist. V. g. The *Ideas* of *Sacrilege* or *Per-*

jury, &c. were as real and true Ideas before, as after the Existence of any fuch Fact. But our Ideas of Substances being supposed Copies, and referred to Archetypes without us, must still be taken from something that does or has existed; they must not consist of Ideas put together at the pleafure of our Thoughts, without any real Pattern they were taken from, tho' we can perceive no Inconfistence in such a Combination. The Reason whereof is, because we knowing not what real Constitution it is of Substances, whereon our fimple Ideas depend, and which really is the cause of the firict Union of some of them one with another, and the Exclusion of others; there are very few of them, that we can be sure are, or are not inconsistent in Nature, any farther than Experience and fenfible Observation reach. therefore is founded the Reality of our Knowledge concerning Substances, that all our complex Ideas of them must be fuch and fuch only, as are made up of fuch simple ones, as have been discovered to co-exist in Nature. And our Ideas being thus true, tho' not, perhaps, very exact Copies, are yet the Subjects of real (as far as we have any) Knowledge of them. Which (as has been already shewed) will not be found to reach very far: But so far as it does, it will still be real Knowledge. Whatever Ideas we have, the Agreement we find they have with others, will fill be Knowledge. those Ideas be abstract, it will be general Knowledge. to make it real concerning Substances, the Ideas must be taken from the real Existence of Things. Whatever simple Ideas have been found to co-exist in any Substance, these we may with Confidence join together again, and so make abstrae: Ideas of Substances. For whatever have once had an Union in Nature, may be united again.

In our Enquiries about Subflances, ave must consider Ideas, and not consine our Thoughts to Names or Species supposed set out by Names. 6. 15. This, if we rightly confider, and confine net our Thoughts and abstract Ideas to Names, as if there were or could be no other forts of Things, than what known Names had already determined, and as it were fet out, we should think of Things with greater

Freedom

Freedom and less Confusion, than perhaps we do. 'Twould possibly be thought a bold Paradox, if not a very dangerous Falshood, if I should say, that some Changelings, who have liv'd Forty Years together, without any Appearance of Reafon, are fomething between a Man and a Beatl: Which Prejudice is founded upon nothing else but a false Supposition, that these two Names, Man and Beast, stand for distinct Species fo fet out by real Effences, that there can come no other Species between them: Whereas if we will abstract from those Names, and the Supposition of such specifick Esfences made by Nature, wherein all Things of the fame Denominations did exactly and equally partake; if we would not fancy that there were a certain number of these Essences, wherein all Things, as in Molds, were cast and formed, we should find that the Idea of the Shape, Motion, and Life of a Man, without Reason, is as much a distinct Idea, and makes as much a distinct fort of Things from Man and Beatt, as the Idea of the Shape of an Ass with Reason, would be different from either that of Man or Beast, and be a Species of an Animal between, or diffind from both.

6. 14. Here every Body will be ready to ask, If Changelings may be supposed something between Man and Beast; pray what are they? I answer, Changelings, which is as good a Word to signify something different from the Signistication of MAN or BEAST, as the Names Man and Beast are to have Signisfications different one from the other. This, well considered, would resolve this Matter, and show my Mean-

Objection against a Changeling, being fume-thing between a Man and Deast, an-

ing without any more ado. But I am not fo unacquainted with the Zeal of some Men, which enables them to spin Consequences, and to see Religion threatned, whenever any one ventures to quit their Forms of Speaking, as not to forefee what Names such a Proposition as this is like to be charged with: And without doubt it will be asked, If Changelings are something between Man and Beast, what will become of them in the other World? To which I answer, 1. It concerns me not to know or enquire. To their own Mafter they fland or fall. It will make their State neither better nor worfe, whether we determine any thing of it, or no. They are in the Hands of a fithful Creator, and a bountiful Father, who disposes not of his Creatures according to our narrow Thoughts or Opinions, nor diffinguishes them according to Names and Species of our Contrivance. And we that know fo little of this present World we are in, may, I think, content our felves without being peremptory in defining the different States, which Creatures shall come into, when they go off this Stage. It may suffice us, that he hath made known to all those, who are capable of Instruction, Discourse, and Reasoning, that they shall come to an Account, and receive according to what they have done in this Body.

§. 15. But, Secondly, I Answer, The force of these Mens

Question, (viz. will you deprive Changelings of a future State?) is founded on one of these two Suppositions, which are both false. The first is, that all Things that have the outward Shape and Appearance of a Man, must necessarily be designed to an Immortal future Being after this Life. Or. fecondly, that whatever is of humane Birth, must be so. Take away these Imaginations, and such Questions will be groundless and ridiculous. I defire then those, who think there is no more but an accidental Difference between themfelves and Changelings, the Essence in both being exactly the fame, to consider, whether they can imagine Immortality annexed to any outward Shape of the Body; the very proposing it, is, I suppose, enough to make them disown it. No one yet, that ever I heard of, how much soever immersed in Matter, allowed that Excellency to any Figure of the gross sensible outward Parts, as to affirm eternal Life due to it, or a neceffary consequence of it; or that any Mass of Matter should, after its Diffolution here, be again restored hereafter to an everlasting State of Sense, Perception and Knowledge, only because it was molded into this or that Figure, and had fuch a particular frame of its visible Parts. Such an Opinion as this, placing Immortality in a certain fuperficial Figure, turns out of Doors all Confideration of Soul or Spirit, upon whose Account alone some corporeal Beings have hitherto been concluded immortal, and others not. This is to attribute more to the outfide, than infide of Things; to place the Excellency of a Man. more in the external Shape of his Body, than internal Perfections of his Soul; which is but little better than to annex the great and inestimable Advantage of Immortality and Life Everlasting, which he has above other material Beings, to annex it, I fay, to the Cut of his Beard, or the Fashion of his Coat. For this or that outward Make of our Bodies, no more carries with it the the Hopes of an eternal Duration, than the Fashion of a Man's Suit gives him reasonable Grounds to imagine it will never wear out, or that it will make him immortal. 'Twill perhaps be faid, that no Bedy thinks that the Shape makes any thing immortal, but 'tis the Shape is the Sign of a rational Soul within, which is immortal. I wonder

wonder who made it the Sign of any fuch Thing: for barely faying it, will not make it fo. It would require fome Proofs to perfuade one of it. No Figure that I know speaks any fuch Language. For it may as rationally be concluded, that the dead Body of a Man, wherein there is to be found no more Appearance or Action of Life than there is in a Statue, has yet nevertheless a living Soul in it, because of its Shape; as that there is a rational Soul in a Changeling, because he has the Outside of a rational Creature, when his Actions carry far less Marks of Reason with them, in the whole Course of his Life, than what are to be found in many a Beast.

§. 16. But 'tis the Issue of rational Parents, and must therefore be concluded to have a rational Monsters.

Soul. I know not by what Logick you must so conclude. I am fure this is a Conclusion that Men no where allow of. For if they did, they would not make bold, as every where they do, to destroy ill-formed and mis-shaped Productions. Ay, but these are Monsters. Let them be so; What will your driveling, unintelligent, intractable Changeling be? Shall a Defect in the Body make a Monster; a Defect in the Mind, (the far more Noble, and in the common Phrase, the far more Essential Part) not? Shall the want of a Nofe, or a Neck, make a Monster, and put fuch Issue out of the Rank of Men; the want of Reafon and Understanding, not? This is to bring all back again to what was exploded just now: This is to place all in the Shape, and to take the Measure of a Man only by his Outfide. To shew that according to the ordinary way of Reafoning in this Matter, People do lay the whole Stress on the Figure, and resolve the whole Essence of the Species of Man (as they make it) into the outward Shape, how unreasonable foever it be, and how much foever they dislown it, we need but trace their Thoughts and Practice a little farther, and then it will plainly appear. The well shaped Changeling is a Man, has a rational Soul, though it appear not; this is past doubt, fay you. Make the Ears a little longer, and more pointed, and the Nofe a little flatter than ordinary, and then you begin to boggle: Make the Face yet narrower, flatter, and longer, and then you are at a stand: Add still more and more of the Likeness of a Brute to it, and let the Head be perfectly that of some other Animal, then presently 'tis a Monster; and 'tis Demonstration with you that it hath no rational Soul, and must be destroy'd. Where now (I ask) shall be the just Measure of the utmost Bounds of that Shape, that carries with it a rational Soul? For fince there Vol. II. have

have been Humane Fætus's produced, half Beast, and half Man; and others three parts one, and one part t'other; and fo it is peffible they may be in all the Variety of Approaches to the one or the other Shape, and may have feveral Degrees of Mixture of the Likeness of a Man, or a Brute, I would gladly know what are those precise Lineaments, which according to this Hypothesis, are, or are not capable of a rational Soul to be joined to them. What fort of Outfide is the certain Sign that there is, or is not fuch an Inhabitant within? For till that be done, we talk at random of Man: and shall always, I fear do so, as long as we give our selves up to certain Sounds, and the Imaginations of fettled and fixed Species in Nature, we know not what. But after all, I defire it may be confidered, that those who think they have answered the Difficulty, by telling us, that a mis-shaped Fætus is a Monster, run into the fame Fault they are arguing against, by constituting a Species between Man and Beast. For what else, I pray, is their Monster in the Case, (if the Word Monfler fignifies any thing at all) but fomething neither Man nor Beaft, but partaking fomewhat of either? And just so is the Changeling before-mentioned. So necessary is it to quit the common Notion of Species and Essences, if we will truly look into the Nature of Things, and examine them, by what our Faculties can discover in them as they exift, and not by groundless Fancies, that have been taken up about them.

§. 17. I have mentioned this here, because I think we cannot be too cautious that Words Words and and Species, in the ordinary Notions which we Species. have been used to of them, impose not upon us. For I am apt to think, therein lies one great Obstacle to our clear and diffinct Knowledge, especially in reference to Subflances; and from thence has arose a great part of the Difficulties about Truth and Certainty. Would we accustom our felves to separate our Contemplations and Reasonings from Words, we might, in a great Measure, remedy this Inconvenience within our own Thoughts. But yet it would still disturb us in our Discourse with others, as long as we retained the Opinion, that Species and their Eisences were any thing else but our abstract Ideas, (such as they are) with Names annexed to them, to be the Signs of them.

§. 18. Wherever we perceive the Agreement or Disagreement of any of our Ideas, there is certain Knowledge: And wherever we are sure tion those Ideas agree with the Reality of Things, there is certain real Knowledge. Of which Agreement of our Ideas with the Reality of Things, having here given the Marks, I think I have shewn wherein it is, that Gertainty, real Gertainty, consists. Which whatever it was to others, was, I consess, to me heretosore, one of those Desiderata which I

found great want of.

CHAP. V.

Of Truth in General.

§. I. WHAT is Truth, was an Enquiry many Ages fince; and it being that which all Mankind either do, or pretend to fearch after, it cannot but be worth our while carefully to examine wherein it confifts; and so acquaint our selves with the Nature of it, as to observe how the Mind distinguishes it from Fa!shood.

§. 2. Truth then feems to me, in the proper import of the Word, to fignify nothing but the joining and feparating of Signs, as the Things fignified by them, do agree or difagree one with another. The joining or feparating of Signs i. e here meant, is what by another Name we call Proposition. So that Truth properly belongs

A right joining or separating of Signs; i. e. Ideas or Words.

only to Propositions: whereof there are two forts, viz. Mental and Verbal; as there are two forts of Signs commonly made use of, viz. Ideas and Words.

§. 3. To form a clear Notion of Truth, it is very necessary to consider Truth of Thought, and Truth of Words, distinctly one from another: but yet it is very difficult to treat of them asunder: Because it is unavoidable, in treating

Which make mental or verbal Propositions.

of Mental Propositions, to make use of Words: and then the Instances given of *Mental Propositions*, cease immediately to be barely Mental, and become Verbal. For a mental Proposition

1 2

fition being nothing but a bare Confideration of the Ideas, at they are in our Minds stripped of Names, they lose the Nature of purely mental Propositions, as soon as they are put into Words.

Mental Propositions are very hard to be treated of. §. 4. And that which makes it yet harder to treat of mental and verbal Propositions separately, is, That most Men, if not all, in their Thinking and Reasonings within themselves, make use of Words instead of Ideas, at least

when the Subject of their Meditation contains in it complex Which is a great Evidence of the Imperfection and Uncertainty of our *Ideas* of that kind, and may, if attentively made use of, serve for a mark to shew us, what are those Things, we have clear and perfect established Ideas of, and For if we will curiously observe the way our Mind takes in Thinking and Reasoning, we shall find, I suppose, that when we make any Propositions within our own Thoughts, about White or Black, Sweet or Bitter, a Triangle or a Circle, we can and often do frame in our Minds the Ideas themfelves, without reflecting on the Names. But when we would confider, or make Propositions about the more complex *Ideas*, asof a Man, Vitriol, Fortitude, Glory, we usually put the Name for the Idea: Because the Ideas these Names stand for, being for the most part imperfect, consused, and undetermined, we reflect on the Names themselves, because they are more clear, vertain and diffinct, and readier occur to our Thoughts than the pure *Ideas*; and fo we make use of these Words instead of the Ideas themselves, even when we would meditate and reafon within our felves, and make tacit mental Propositions. In Substances, as has been already noted, this is occasioned by the Imperfection of our *Ideas*; we making the Name stand for the real Effence, of which we have no *Idea* at all. In *Modes*, it is occasioned by the great Number of simple Ideas, that go to the making them up. For many of them being compounded, the Name occurs much easier than the complex Idea it self, which requires Time and Attention to be recollected, and exactly represented to the Mind, even in those Men who have formerly been at the Pains to do it; and is utterly impossible to be done by those, who though they have ready in their Memory the greatest part of the common Words of their Language, yet perhaps, never troubled themselves in all their Lives, to confider what precise *Ideas* the most of them stood for. Some confused or obscure Notions have served their turns; and many who talk very much of Religion and Confeience, of Church and Faith. Faith, of Power and Right, of Obstructions and Humours, Melancholy and Choler, would, perhaps, have little left in their Thoughts and Meditations, if one should defire them to think only of the Things themselves, and lay by those Words, with which they so often consound others, and not seldom themselves also.

§. 5. But to return to the Confideration of Truth. We must, I say, observe two forts of Propositions, that we are capable of making.

First, Mental, wherein the Ideas in our Understandings are without the use of Words put together or separated by the Mind, perceiving or judging of their Agreement or Disagreement.

Being nothing but the joining or feparating Ideas without Words.

Secondly, Verbal Propositions, which are Words, the Signs of our Ideas put tegether or separated in Assimilative or Negative Sentences. By which way of assiming or denying, these Signs made by Sounds, are as it were put together or separated one from another. So that Proposition confiss in joining, or separating Signs, and Truth consists in the putting together, or separating these Signs, according as the Things, which they stand for, agree or disagree.

§. 6. Every one's Experience will fatisfy him, that the Mind, either by perceiving or supposing the Agreement or Disagreement of any of its *Ideas*, does tacitly within it self put them into a kind of Proposition affirmative or negative, which I have endeavoured to express by the

When mental Propelitions contain real Truth, and when verbal.

Terms Putting together and Separating. But this Action of the Mind, which is so familiar to every Thinking and Reasoning Man, is easier to be conceived by reflecting on what passes in us, when we affirm or deny, than to be explained by Words. When a Man has in his Mind the Idea of two Lines, viz. the Side and Diagonal of a Square, whereof the Diagonal is an Inchlong, he may have the *Idea* also of the Division of that Line, into a certain Number of equal Parts; v. g. into Five, Ten, an Hundred, a Thousand, or any other Number, and may have the Idea of that Inch Line, being divisible or not divisible, into such equal Parts, as a certain Number of 'cm will be equal to the Now whenever he perceives, believes, or supposes fuch a kind of Divisibility to agree or disagree to his Idea of that Line, he, as it were, joins or separates those two Ideas, viz. the Idea of that Line, and the Idea of that kind of Divifibility, and fo makes a mental Proposition, which is true or false, according as such a kind of Divisibility, a Divisibility

into such aliquot Parts, does really agree to that Line or no. When Ideas are so put together, or separated in the Mind, as they, or the Things they stand for, do agree or not, that is, as I may call it, mental Truth. But Truth of Words is something more, and that is the affirming or denying of Words one of another, as the Ideas they stand for agree or disagree: And this again is two-fold; Either purely Verbal and trisling, which I shall speak of, Chap. 10. or Real and instructive; which is the Object of that real Knowledge, which we have spoken of already.

&. 7. But here again will be apt to occur the Objection afame Doubt about Truth, that did about Knoweainst verbal Truth , that ledge: And it will be objected, That if Truth thus it may all be nothing but the joining or feparating of be chimerical. Words in Propositions, as the Ideas they stand for agree or disagree in Mens Minds, the Knowledge of Truth is not so valuable a Thing, as it is taken to be; nor worth the Pains and Time Men employ to the fearch of it; fince by this Account it amounts to no more than the Conformity of Words to the Chimera's of Mens Brains. Who knows not what odd Notions many Mens Heads are filled with, and what strange Ideas all Mens Brains are capable of? But if we rest here, we know the Truth of nothing by this Rule, but of the visionary World in our own Imaginations; nor have other Truth, but what as much concerns Harpies and Centaurs, as Men and Horses. For those, and the like, may be Ideas in our Heads, and have their Agreement and Disagreement there, as well as the Ideas of real Beings, and fo have as true Propositions made about them. And 'twill be altogether as true a Proposition, to say all Centaurs are Animals, as that all Men are Animals; and the Certainty of one, as great as the other. For in both the Propositions, the Words are put together according to the Agreement of the Ideas in our Minds: And the Agreement of the Idea of Animal with that of Centaur, is as clear and visible to the Mind as the Agreement of the Idea of Animal with that of Man; and to these two Propositions are equally true, equally cer-But of what use is all such Truth to us?

S. S. Though what has been faid in the foregoing Chapter, to distinguish real from imaginary Knowledge, might suffice here, in answer to this Doubt, to distinguish real Truth from chimerical, or (if you please) barely nominal,

they depending both on the same Foundation; yet it may not be amis here again to consider, that though our Words signify

nothing

nothing but our Ideas, yet being defigned by them to fignify Things, the Truth they contain, when put into Propositions, will be only Verbal, when they stand for Ideas in the Mind, that have not an Agreement with the Reality of Things. And therefore Truth, as well as Knowledge, may well come under the Distinction of Verbal and Real; that being only verbal Truth, wherein Terms are joined according to the Agreement or Difagreement of the *Ideas* they stand for, without regarding whether our Ideas are fuch as really have, or are capable of having an existence in Nature. But then it is they contain real Truth, when these Signs are joined, as our Ideas agree; and when our *Ideas* are fuch as we know are capable of having an Existence in Nature: which in Substances we cannot know, but by knowing that fuch have existed.

§. 9. Truth is the marking down in Words, the Agreement or Difagreement of *Ideas* as it is. Falshood is the marking down in Words, the Agreement or Disagreement of Ideas otherwise than it is. And so far as these *Ideas* thus mark'd by Sounds, agree to their Archetypes, fo far only is the Truth real. The Knowledge of this Truth

Falsbood is the joining of Names otherwise than their Ideas agree.

confifts in knowing what Ideas the Words fland for, and the Perception of the Agreement or Difagreement of those Ideas,

according as it is marked by those Words.

\$. 10. But because Words are look'd on as the great Conduits of Truth and Knowledge, and that in conveying and receiving of Truth, and commonly in Reasoning about it, we make use of Words and Propositions, I shall more at large enquire, wherein the Certainty of real Truths, contained in Propositions, confilts, and where it is to be lad; and endea-

General Protositions to be treated of more at large.

capable of being certain of their real Truth or Fulfhood. I shall begin with general Prop skitons, as those which most employ our Thoughts, and exercise our Contemplation. General Truths are most looked after by the Mind, as chose that most enlarge our Knowledge; and by their Comprehensiveness, satisfying us at once of many Particulars, chlarge our

your to flew in what fort of univertal Propolitions we are

View, and shorten our way to Knowledge.

S. 11. Besides Truth taken in the ftrict Sense before-mentioned, there are other forts of Truths; as, 1. Moral Truth, which is speaking of Things according to the Perfuation of our

Alral and metaphysical Tratb.

own Minds, though the Proposition we speak agree not to the Reality Reality of Things. 2. Metaphysical Truth, which is nothing but the real Existence of Things, conformable to the Ideas to which we have annexed their Names. This, though it seems to confist in the very Beings of Things, yet when confidered a little nearly, will appear to include a tacit Proposition, whereby the Mind joins that particular Thing to the Idea it had before settled with a Name to it. But these Considerations of Truth, either having been before taken Notice of, or not being much to our present purpose, it may suffice here only to have mentioned them.

CHAP. VI.

Of Universal Propositions, their Truth and Certainty.

Treating of Words necessary to Know-ledge.

S. 1. THOUGH the examining and judging of Ideas by themselves, their Names being quite laid aside, be the best and surest way to clear and distinct Know-ledge; yet thro' the prevailing Custom of

ufing Sounds for *Ideas*, I think it is very feldom practifed. Every one may observe how common it is for Names to be made use of, instead of the *Ideas* themselves, even when Men think and reason within their own Breasts; especially if the *Ideas* be very complex, and made up of a great Collection of simple ones. This makes the Consideration of Words and Propositions so necessary a part of the Treatise of Knowledge, that its very hard to speak intelligibly of the one, without explaining the other.

General
Truths hardly to be underflood, but in
verbal Propositions.

§. 2. All the Knowledge we have being only of particular or general Truths, 'tis evident, that whatever may be done in the former of these, the latter, which is that which with Reason is most sought after, can never be well made known, and is very seldom apprehended, but as conceived and expressed in Words. It is

not therefore out of our way, in the Examination of our Knowledge, to enquire into the Truth and Certainty of universal Propositions.

§. 3.

§. 3. But that we may not be missed in this Certainty Case, by that which is the Danger every where, I two-fold, of Truth and of mean by the doubtfulness of Terms, 'tis fit to ob-Knowledge. ferve that Certainty is two-fold: Certainty of Truth, and Certainty of Knowledge. Certainty of Truth is, when Words are so put together in Propositions, as exactly to express the Agreement or Disagreement of the Ideas they stand for, as really it is. Certainty of Knowledge is, to perceive the Agreement or Difagreement of Ideas, as expressed This we usually call knowing, or being in any Proposition. certain of the Truth of any Proposition.

§. 4. Now because we cannot be certain of the Truth of any general Proposition, unless we know the precise Bounds and Extent of the Species its Terms stand for, it is necessary we should know the Essence of each Species, which is that which constitutes and bounds it. This, in all simple Ideas and Modes, is not hard to do. For in these, the real and nominal Essence being the same; or which is all one, the Abstract Idea,

No Proposition can be known to be truc, where the Essence of each Species mentioned is not known.

which the general Term stands for, being the sole Essence and Boundary that is or can be supposed, of the Species, there can be no doubt, how far the Species extends, or what Things are comprehended under each Term; which 'tis evident, are all that have an exact Conformity with the Idea it stands for, and no other. But in Substances, wherein a real Essence diflinct from the nominal, is supposed to constitute, determine, and bound the Species, the Extent of the general Word is very uncertain: because not knowing this real Essence, we cannot know what is, or is not of that Species, and confequently what may, or may not with Certainty be affirmed of it. And thus speaking of a Man, or Gold, or any other Species of natural Substances, as supposed constituted by a precise real Essence, which Nature regularly imparts to every individual of that Kind, whereby it is made to be of that Species, we cannot be certain of the Truth of any Affirmative or Negation made of it. For Man, or Gold, taken in this Sense, and used for Species of Things, constituted by real Essences, different from the complex Idea in the Mind of the Speaker, fland for we know not what, and the Extent of these Species, with fuch Boundaries, are fo unknown and undetermined, that it is impossible with any Certainty, to affirm, that all Men are rational, or that all Gold is yellow. But where the nominal Effence is kept to, as the Boundary of each Species, and Men extend the Application of any general Term no farther than to the particular Things, in which the complex *Idea* it ftands for is to be found, there they are in no Danger to mistake the Bounds of each Species, nor can be in doubt, on this Account, whether any Propositions be true, or no. I have chose to explain this uncertainty of Propositions in this scholastick way, and have made use of the Terms of Essences and Species, on purpose to shew the Absurdity and Inconvenience there is to think of them, as of any other fort of Realities, than barely abstract Ideas with Names to them. To suppose, that the Species of Things are any thing, but the forting of them under general Names, according as they agree to feveral abftract Ideas, of which we make those Names the Signs, is to confound Truth, and introduce Uncertainty into all general Propositions, that can be made about them. Though therefore these Things might, to People not possessed with scholaflick Learning, be perhaps treated of in a better and clearer way; yet those wrong Notions of Essences or Species, having got Root in most Peoples Minds, who have received any Tin-Eture from the Learning which has prevailed in this part of the World, are to be discovered and removed, to make way for that use of Words which should convey Certainty with it.

This more particularly concerns Sub-flances.

§. 5. The Names of Substances then, whenever made to stand for Species, which are supposed to be constituted by real Essences which we know not, are not capable to convey Certainty to the Understanding: of the Truth of general Propositions made up of such Terms we cannot

be fure. The Reafon whereof is plain. For how can we be fure that this or that Quality is in Gold, when we know not what is or is not Gold. Since in this way of speaking nothing is Gold, but what partaks of an Essence, which we not knowing, cannot know where it is, or is not, and fo cannot be fure, that any parcel of Matter in the World is or is not in this Sense Goin; being incurably ignorant, whether it has or has not that which makes any thing to be called Gold, i. e. that real Effence of Gold whereof we have no Idea at all. This being as impofable for us to know, as it is for a blind Man to tell in what Flower the Colour of a Panste is, or is not to be found, whilst he has no Idea of the Colour of a Pansie at all. Or if we could (which is impossible) certainly know where a real Essence, which we know not, is; v.g. in what Parcels of Matter the real Essence of Gold is; yet could we not be sure, that this or that Quality could with Truth be affirmed of Gold; fince it is impossible for us to know, that this or that Quality or *Idea* has a necessary Connection with a real Essence, of which we have no *Idea* at all, whatever Species that supposed real

Essence may be imagined to constitute.

§. 6. On the other fide, the Names of Subflances, when made use of as they should be, for the Ideas Men have in their Minds, tho' they carry a clear and determinate Signification with them, will not yet ferve us to make many universal Propositions, of whose Truth we can be certain. Not because in this use of them we are uncertain what Things are signified by them, but because the complex Ideas they stand Combinations of simple ones, as carry not with

The Truth of few univerfal Propofitions concerning Subflances, is to be known.

them, but because the complex *Ideas* they stand for, are such Combinations of simple ones, as carry not with them any discoverable Connection or Repugnancy, but with a very sew

other Ideas.

§. 7. The complex *Ideas*, that our Names of the Species of Substances properly stand for, are Collections of such Qualities as have been observed to co-exist in an unknown *Substratum*, which we call *Substance*; but what other Qualities necessarily co-exist with such Combinati-

Because Coexistence of Ideas in few Cases is to be known.

ons, we cannot certainly know, unless we can discover their natural Dependance; which in their primary Qualities, we can go but a very little way in; and in all their secondary Qualities, we can discover no Connection at all, for the Reasons mentioned, Chap. 3. viz. 1. Because we know not the real Constitutions of Substances, on which each secondary Quality particularly depends. 2. Did we know that, it would serve us only for experimental (not universal) Knowledge; and reach with Certainty no farther than that bare Instance: Because our Understandings can discover no conceivable Connection between any secondary Quality, and any Modification whatsoever of any of the primary ones. And therefore there are very sew general Propositions to be made concerning Substances, which can carry with them undsubted Certainty.

§. S. All Gold is fixed, is a Proposition whose Truth we cannot be certain of, how universally foever it be believed. For if, according to the Gold.

useless Imagination of the Schools, any one sup-

poses the Term Gold to stand for a Species of Things set out by Nature, by a real Essence belonging to it, 'tis evident he knows not what particular Substances are of that Species; and so cannot, with Certainty, assist any thing universally of

Gold,

Gold. But if he makes Gold stand for a Species, determined by its nominal Effence, let the nominal Effence, for Example, be the complex Idea of a Body, of a certain yellow Colour, malleable, fufible, and beavier than any other known; in this proper use of the Word Gold, there is no Difficulty to know what is, or is not Gold. But yet no other Quality can with Certainty be universally affirmed or denied of Gold, but what hath a discoverable Connection or Inconfishency with that nominal Effence. Fixedness, for Example, having no necessary Connection, that we can discover, with the Colour, Weight, or any other simple Idea of our complex one, or with the whole Combination together; it is impossible that we should certainly know the Truth of this Proposition, That all Gold is fixed. §. 9. As there is no discoverable Connection between Fixedness, and the Colour, Weight, and other simple Ideas of that nominal Essence of Gold; so if we make our complex Idea of Gold, a Body yellow, fufible, dustile, weighty, and fixed, we Thall be at the fame Uncertainty concerning Solubility in Aq. Regia; and for the fame Reason: Since we can never, from Confideration of the *Ideas* themselves, with Certainty affirm or deny, of a Body, whose complex Idea is made up of Yellow, very weighty, ductile, fulible and fixed, that it is foluble in Aq. Regia; And fo on of the rest of its Qualities. gladly meet with one general Affirmation, concerning any Quality of Gold, that any one can certainly know is true. will, no doubt, be presently objected, Is not this an universal certain Proposition, All Gold is Mulleable? To which I answer, It is a very certain Proposition, if Malleableness be a part of the complex *Idea* the word *Gold* stands for. But then here is nothing affirmed of Gold, but that that Sound stands for an Idea in which Malleableness is contained: And such a fort of Truth and Certainty as this, it is to fay a Centaur is four footed. But if Malleableness makes not a part of the Specifick Effence the Name Gold stands for, 'tis plain, All Gold is Malleable, is not a certain Proposition. Because let the complex Idea of Gold, be made up of which foever of its other Qualities you please, Malleableness will not appear to depend on that complex *Idea*, nor follow from any fimple one contained in it. The Connection that Malleableness has (if it has any) with those other Qualities, being only by the Intervention of the real Constitution of its insensible Parts, which since we know not, 'tis impossible we should perceive that Connection, unless we could discover that which ties them together.

§. 10. The more, indeed, of these co-existing Qualities we unite into one complex Idea, under one Name, the more precise and determinate we make the Signification of that Word: but yet never make it thereby more capable of universal Gertainty, in respect of other Qualities, not contained in our complex Idea; since we perceive not their Connection or Dependance one on another; being ignorant both of that real Constitution in which they are all founded; and also how they slow from it. For

As far as any fuch Co-exiflence can be known, fo far univerfal Propositions may be certain. But this will go but a little way, because,

the chief part of our Knowledge concerning Substances, is not, as in other Things, barely of the Relation of two Ideas that may exitt feparately; but is of the necessary Connection and Co-existence of several distinct Ideas in the same Subject, or of their Repugnancy fo to Co-exist. Could we begin at the other end, and discover what it was, wherein that Colour confifted, what made a Body lighter or heavier, what Texture of Parts made it malleable, fufible, and fixed, and fit to be diffolved in this fort of Liquor, and not in another; if (I fay) we had fuch an *Idea* as this of Bodies, and could perceive wherein all fenfible Qualities originally confift, and how they are produced; we might frame such abstract Ideas of them, as would furnish us with Matter of more general Knowledge, and enable us to make univerfal Propositions, that should carry general Truth and Certainty with them. But whilst our complex Ideas of the Sorts of Substances are fo remote from that internal real Constitution, on which their sensible Qualities depend, and are made up of nothing but an imperfect Collection of those apparent Qualities our Senses can discover, there can be very few general Propositions concerning Substances, of whose real Truth we can be Certainly affured; fince there are but few fimple Ideas, of whose Connection and necessary Co-existence, we can have certain and undoubted Knowledge. I imagine, amongst all the secondary Qualities of Substances, and the Powers relating to them, there cannot any two be named, whose necessary Co-existence, or Repugnance to co-exist, can certainly be known, unless in those of the fame Sense, which necessarily exclude one another, as I have elsewhere shewed. No one, I think, by the Colour that is in any Body, can certainly know what Smell, Taste, Sound or tangible Qualities it has, nor what Alterations it is capable to make or receive, on, or from other Bodies. fame fame may be faid of the Sound or Taste, &c. Our Specifick Names of Substances slanding for any Collections of such Ideas, it is not to be wondered, that we can, with them, make very sew general Propositions of undoubted real Certainty. But yet so far as any complex Idea, of any fort of Substances, contains in it any simple Idea, whose necessary Co-existence with any other may be discovered, so far Universal Propositions may with Certainty be made concerning it: v.g. Could any one discover a necessary Connection between Malleableness, and the Colour or Weight of Gold, or any other part of the complex Idea, signified by that Name, he might make a certain universal Proposition concerning Gold in this respect; and the real Truth of this Proposition, That all Gold is Malleable, would be as certain as of this, The three Angles of all right-lined Triangles, are equal to two right ones.

The Qualities which make our complex Ideas of Sub-flances depend mostly on external, remote and unperceiv'd Causes.

§. 11. Had we fuch *Ideas* of Substances, as to know what real Constitutions produce those sensible Qualities we find in them, and how those Qualities flowed from thence, we could, by the Specifick *Ideas* of their real Essences in our own Minds, more certainly find out their Properties, and discover what Qualities they had, or had not, than we can now by our Senses: And to know the Properties of *Gold*, it would be no more necessary that *Gold* should exist, and that

we should make Experiments upon it, than it is necessary for the knowing the Properties of a Triangle, that a Triangle should exist in any Matter; the Idea in our Minds would ferve for the one, as well as the other. But we are fo far from being admitted into the Secrets of Nature, that we fcarce fo much as ever approach the first Entrance towards them. For we are wont to confider the Substances we meet with, each of them as an entire Thing by it felf, having all its Qualities in it felf, and independent of other Things; over-looking, for the most part, the Operations of those invisible Fluids they are encompassed with; and upon whose Motions and Operations depend the greatest part of those Qualities which are taken Notice of in them, and are made by us the inherent Marks of Distinction, whereby we know and denominate them. Put a Piece of Gold any where by it felf, separate from the Reach and Influence of all other Bodies, it will immediately lose all its Colour and Weight, and perhaps Malleablenesstoo: Which, for ought I know, would be changed into a perfect Friability. Water.

Water, in which to us Fluidity is an effential Quality, left to it felf, would cease to be fluid. But if inanimate Bodies owe fo much of their present State to other Bodies without them, that they would not be what they appear to us, were those Bodies that inviron them removed, it is yet more so in Vegetables, which are nourished, grow, and produce Leaves, Flowers, and Seeds, in a conflant Succession. And if we look a little nearer into the State of Animals, we shall find, that their Dependance, as to Life, Motion, and the most considerable Qualities to be observed in them, is so wholly on extrinfical Causes and Qualities of other Bodies, that make no part of them, that they cannot subsist a Moment without them: Though yet those Bodies on which they depend, are little taken Notice of, and make no part of the complex Ideas we frame of those Animals. Take the Air but a Minute from the greatest part of Living Creatures, and they presently lose Sense, Life, and Motion. This the Necessity of Breathing has forced into our Knowledge. But how many other extrinfical, and possibly very remote Bodies, do the Springs of those admirable Machines depend on, which are not vulgarly observed, or so much as thought on; and how many are there, which the feverest Enquiry can never Discover? The Inhabitants of this Spot of the Universe, though removed so many Millions of Miles from the Sun, yet depend fo much on the duly tempered Motion of Particles coming from, or agitated by it, that were this Earth removed but a small part of that Distance out of its present Situation, and placed a little farther or nearer that Source of Heat, 'tis more than probable, that the greatest part of the Animals in it would immediately perish: Since we find them so often destroyed by an Excess or Defect of the Sun's Warmth, which an accidental Polition, in fome Parts of this our little Globe, exposes them to. The Qualities observed in a Loadstone must needs have their Scource far beyond the Confines of that Body; and the Ravage made often on feveral Sorts of Animals, by invisible Causes, the certain Death (as we are told) of fome of them, by barely paffing the Line, or, as 'tis certain of others, by being removed into a neighbouring Country, evidently shew, that the Concurrence and Operation of feveral Bodies, with which they are feldom thought to have any thing to do, is absolutely necessary to make them be what they appear to us, and to preferve those Qualities, by which we know and diffinguish them. We are then quite out of the Way, when we think that

Things contain within themselves the Qualities that appear to us in them: And we in vain fearch for that Constitution within the Body of a Fly, or an Elephant, upon which depend those Qualities and Powers we observe in them. For which, perhaps, to understand them aright, we ought to look, not only beyond this our Earth, and Atmosphere, but even beyond the Sun, or remotest Star our Eyes have yet discovered. For how much the Being and Operation of particular Substances in this our Globe, depend on Causes utterly beyond our view, is impossible for us to determine. and perceive fome of the Motions, and groffer Operations of Things here about us; but whence the Streams come that keep all these curious Machines in Motion and Repair, how conveyed and modified, is beyond our Notice and Apprehenfion; and the great Parts and Wheels, as I may fo fay, of this stupendious Structure of the Universe, may, for ought we know, have such a Connection and Dependance in their Influences and Operations one upon another, that, perhaps, Things in this our Manfion, would put on quite another Face, and cease to be what they are, if some one of the Stars or great Bodies incomprehenfibly remote from us, should cease to be or move as it does. This is certain, Things however abfolute and entire they feem in themselves, are but Retainers to other Parts of Nature, for that which they are most taken Notice of by us. Their observable Qualities, Actions and Powers, are owing to fomething without them; and there is not so complete and perfect a Part, that we know of Nature, which does not owe the Being it has, and the Excellencies of it, to its Neighbours; and we must not confine our Thoughts within the Surface of any Body, but look a great deal farther, to comprehend perfectly those Qualities that are in it.

§. 12. If this be so, it's not to be wondered, that we have very imperfect Ideas of Substances; and that the real Essences on which depend their Properties and Operations, are unknown to us. We cannot discover so much as that Size, Figure, and Texture of their minute and active Parts, which is really in them; much less the different Motions and Impulses made in and upon them by Bodies from without, upon which depends, and by which is formed the greatest and most remarkable Part of those Qualities we observe in them, and of which our complex Ideas of them are made up. This Consideration alone is enough to put an end to all our Hopes of ever having the Ideas of their real Essences; which,

whilft

whilst we want, the nominal Essences, we make use of inflead of them, will be able to surnish us but very sparingly with any general Knowledge, or universal Propositions capable of real Gertainty.

§. 13. We are not therefore to wonder, if *Certainty* be to be found in very few general Propositions made concerning Substances: Our Knowledge of their Qualities and Properties go very seldom farther than our Senses reach and inform us. Possibly inquisitive and

Judgment may reach farther, but that is not Knowledge.

observing Men may, by Strength of Judgment, penetrate farther, and on Probabilities taken from wary Observation, and Hints well laid together, often guess right at what Experience has not yet discovered to them. But this is but gueffing still; it amounts only to Opinion, and has not that Certainty which is requisite to Knowledge. For all general Knowledge lies only in our Thoughts, and confifts barely in the Contemplation of our own abstract Ideas. Wherever we perceive any Agreement or Disagreement amongst them, there we have general Knowledge; and by putting the Names of those Ideas together accordingly in Propositions, can with Certainty pronounce general Truths. But because the abstract Ideas of Substances, for which their specifick Names stand, whenever they have any distinct and determinate Signification, have a discoverable Connection or Inconfistency with but a very few other Ideas, the Certainty of universal Propositions concerning Substances, is very narrow and scanty in that part, which is our principal Enquiry concerning them; and there is scarce any of the Names of Substances, let the Idea it is apply'd to be what it will, of which we can generally, and with Certainty pronounce, that it has or has not this or that other Quality belonging to it, and constantly Co-existing or Inconsistent with that Idea, whereever it is to be found.

§. 14. Before we can have any tolerable Knowledge of this kind, we must fir? know what Changes the primary Qualities of one Body do regularly produce in the primary Qualities of another, and how. Secondly, We must know what primary Qualities of any Body,

What is requisite for our Knowledge of Substances.

produce certain Sensations or *Ideas* in us. This is in Truth, no less than to know all the Effects of Matter, under its divers Modifications of Bulk, Figure, Cohesion of Parts, Motion and Rest. Which, I think, every Body will allow, is Vol. II.

utterly impossible to be known by us, without Revelation. Nor if it were revealed to us, what fort of Figure, Bulk and Motion of Corpufcles, would produce in us the Senfation of a yellow Colour, and what fort of Figure, Bulk and Texture of Parts in the Superficies of any Body, were fit to give fuch Corpufcles their due Motion to produce that Colour; would that be enough to make univerful Propositions with Certainty, concerning the feveral forts of them, unless we had Faculties acute enough to perceive the precise Bulk, Figure, Texture and Motion of Bodies in those minute Parts, by which they operate on our Senses, that so we might by those frame our abstract Ideas of them. I have mentioned here only corporeal Substances, whose Operations feem to lie more level to our Understandings: For as to the Operations of Spirits, both their thinking and moving of Bodies, we at first Sight find our felves at a lofs; though perhaps, when we have applied our Thoughts a little nearer to the Confideration of Bodies, and their Operations, and examined how far our Notions, even in these, reach, with any Clearness, beyond sensible Matter of Fact, we shall be bound to confess, that even in these too, our Discoveries amount to very little beyond perfect Ignorance and Incapacity.

Whilst our Ideas of Subslances contain not their real Constitutions, we can make but sero general certain Propositions concerning them. §. 15. This is evident, the abstract complex Ideas of Substances, for which their general Names stand, not comprehending their real Constitutions, can afford us but very little universal Certainty. Because our Ideas of 'em are not inade up of that, on which those Qualities we observe in 'em, and would inform our selves about, do depend, or with which they have any certain Connection. V. g. Let the Idea to which we give the Name Man, be, as it commonly is, a Body of the ordinary Shape, with Sense, voluntary Motion and Reason joined to it. This being the abstract Idea,

and confequently the Effence of our Species Man, we can make but very few general certain Propositions concerning Man, standing for such an Idea. Because not knowing the real Constitution on which Sensation, Power of Motion and Reasoning, with that peculir Shape, depend, and whereby they are united together in the same Subject, there are very sew other Qualities, with which we can perceive them to have a necessary Connection; and therefore we cannot with Certainty affirm, That all Men sleep by Intervals: that no

Man

Man can be nourished by Wood or Stones; that all Men will be poyfoned by Hemlock: Because these Ideas have no Connection nor Repugnancy with this our nominal Effence of Man, with this abstract Idea that Name stands for. We must in these and the like appeal to Tryal in particular Subjects, which can reach but a little way. We must content our felves with Probability in the rest; but can have no general Certainty, whilst our Specifick Idea of Man contains not that real Constitution, which is the Root wherein all his inseparable Qualities are united, and from whence they flow. Whilst our Idea the word Man stands for, is only an imperfect Collection of fome fenfible Qualities and Powers in him, there is no discernible Connection or Repugnance between our Specifick Idea, and the Operation of either the Parts of Hemlock or Stones, upon his Constitution. There are Animals that fafely eat Hemlock, and others that are nourished by Wood and Stones: But as long as we want *Ideas* of those real Conflitutions of different forts of Animals, whereon these, and the like Qualities and Powers depend, we must not hope to reach Certainty in univerfal Propositions concerning them. Those few Ideas only, which have a discernible Connection with our nominal Essence, or any part of it, can afford us such Propositions. But these are so few, and of so little Moment, that we may justly look on our certain general Knowledge of Substances, as almost none at all.

§. 16. To conclude, General Propositions, of what kind soever, are then only capable of Certainty, when the Terms used in them stand for such Ideas, whose Agreement or Disagreement, as there expressed, is capable to be discovered by us. And we are then certain

Wherein lies the general Certainty of Propolitions.

of their Truth or Falshood, when we perceive the *Ideas* the Terms stand for, to agree, or not agree, according as they are affirm'd or deny'd one of another. Whence we may take Notice, that *general Certainty* is never to be found but in our *Ideas*. Whenever we go to seek it elsewhere in Experiment or Observations without us, our Knowledge goes not beyond Particulars. 'Tis the Contemplation of our own abstract *Ideas*, that alone is able to afford us *general Knowledge*.

CHAP. VII.

Of Maxims.

They are felf-evident. There are a fort of Propositions, which funder the Name of Maxims and Axioms, have passed for Principles of Science; and because they are felf-evident, have been supposed innate, altho' no Body (that I know) ever went about to shew the Reason and Foundation of their Clearness or Cogency. It may however be worth while to enquire into the Reason of their Evidence, and see whether it be peculiar to 'em alone, and also examine how far they influence and govern our other Knowledge.

Wherein that Self-evidence confifts. §. 2. Knowledge, as has been shewn, consists in the Perception of the Agreement or Disagreement of *Ideas*: Now, where that Agreement or Disagreement is perceived immediately by it felf, without the Intervention or Help of

any other, there our Knowledge is Self-evident. This will appear to be so to any one, who will but consider any of those Propositions, which, without any Proof, he affents to at first Sight; for in all of them he will find, that the Reason of his Assent, is from that Agreement or Disagreement, which the Mind, by an immediate comparing them, finds in those Ideas answering the Assirtance or Negation in the Proposition.

Self evidence not peculiar to received Axioms. §. 3. This being fo, in the next Place let us confider, whether this Self-evidence be peculiar only to those Propositions which commonly pass under the Name of Maxims, and have the Dignity of Axioms allowed them. And here 'tis plain, that feveral other Truths, not al-

lowed to be Axioms, partake equally with them in this Self-evidence. This we shall see, if we go over these several Sorts of Agreement or Disagreement of Ideas, which I have above-mentioned, viz. Identity, Relation, Co-existence, and real Existence; which will discover to us, that not only those sew Propositions, which have had the Credit of Maxims,

are felf-evident, but a great many, even almost an infinite

Number of other Propositions are such.

§. 4. For, First, The immediate Perception of the Agreement or Disagreement of Identity, being founded in the Mind's having diffinct Ideas, this affords us as many Self-evident Propositions, as we have distinct Ideas. Every one that has any Knowledge at all, has, as the

First, As to Identity and Diversity, all Propositions are equally self-evident.

Foundation of it, various and distinct Ideas: And it is the first Act of the Mind, (without which, it can never be capable of any Knowledge) to know every one of its Ideas by it felf, and diffinguish it from others. Every one finds in himself, that he knows the Ideas he has; that he knows also, when any one is in his Understanding, and what it is; and that when more than one are there, he knows them diffinctly and unconfusedly one from another. Which always being fo, (it being impossible but that he should perceive what he perceives) he can never be in doubt when any Idea is in his Mind, that it is there, and is that Idea it is; and that two diffinct Ideas, when they are in his Mind, are there, and are not one and the same Idea. So that all such Affirmations and Negations, are made, without any Poffibility of Doubt, Uncertainty or Hesitation, and must necessarily be affented to, as foon as understood; that is, as foon as we have in our Minds, determin'd Ideas, which the Terms in the Proposition stand for. And therefore wherever the Mind with Attention confiders any Proposition, so as to perceive the two Ideas, fignified by the Terms, and affirmed or denied one of the other, to be the same or different, it is presently and infallibly certain of the Truth of fuch a Proposition, and this equally, whether these Propositions be in Terms standing for more general Ideas, or such as are less so, v. g. whether the general Idea of Being be affirmed of it felf, as in this Proposition, Whatsoever is, is; or a more particular Idea be asfirmed of it self, as a Man is a Man, or whatsoever is White, is White. Or whether the Idea of Being in general be denied of not Being, which is the only (if I may so call it) Idea different from it, as in this other Proposition, it is impossible for the same Thing to be, and not to be; or any Idea of any particular Being be denied of another different from it, as a Man is not a Horse; Red is not Blue. The Difference of the Ideas, as foon as the Terms are understood, makes the Truth of the Proposition presently visible, and that with an equal Certainty and Easiness in the less, as well as the

more general Propositions, and all for the same Reason, viz. because the Mind perceives in any Ideas, that it has the fame Idea to the fame with it felf; and two different Ideas to be different, and not the fame. And this it is equally certain of, whether these Ideas be more or less general, abstract, and comprehensive. It is not therefore alone to these two general Propositions, Whatsoever is, is; and it is impeffible for the same thing to be, and not to be; that this Self-evidence belongs by any peculiar Right. The Perception of being, or not being, belongs no more to these vague Ideas, fignified by the Terms Whatfoever and Thing, than it does to any other Ideas. These two general Maxims amounting to no more, in short, but this, that the same is the fame, and fame is not different, are Truths known in more particular Inflances, as well as in these general Maxims, and known also in particular Instances, before these general Maxims are ever thought on, and draw all their Force from the Discernment of the Mind employ'd about particular Ideas. There is nothing more visible, than that the Mind, without the help of any Proof or Reflection on either of these general Propositions, perceives so clearly, and knows so certainly, that the Idea of White is the Idea of White, and not the Idea of Blue; and that the Idea of White, when it is in the Mind, is there, and is not absent, that the Consideration of these Axioms can add nothing to the Evidence or Certainty of its Knowledge. Just so it is (as every one may experiment in himself) in all the *Ideas* a Man has in his Mind: He knows each to be it felf, and not to be another; and to be in his Mind, and not away, when it is there, with a Certainty that cannot be greater; and therefore the Truth of no general Proposition can be known with a greater Certainty, nor add any thing to this. So that in respect of Identity, our intuitive Knowledge reaches as far as our *Ideas*. And we are capable of making as many felf-evident Propositions as we have Names for diffined Ideas. And I appeal to every one's own Mind, whether this Proposition, A Circle is a Circle, be not as felf-evident a Proposition, as that confishing of more general Terms Whatfoever is, is: And again, Whether this Proposition, Blue is not Red, be not a Proposition that the Mind can no more doubt of, as foon as it understands the Words, than it does of that Axiom, it is impossible for the same thing to be, and not to be; and so of all the like.

§. 5. Secondly. As to Co-existence, or such necessary Connection between two Ideas, that in the Subject where one of them is supposed, there the other must necessarily be also; of fuch Agreement or Difagreement as this, the Mind has an immediate Perception but in very few of them; and therefore in this Sort we

Secondly, In Co-existence we have few self evident Propositions.

have but very little intuitive Knowledge. Nor are there to be found very many Propositions that are felf-evident, though fome there are; v. g. the Idea of filling a Place equal to the Contents of its Superficies, being annexed to our Idea of Bcdy, I think it is a felf-evident Proposition, That two Bodies

cannot be in the same Place.

§. 6. Thirdly, As to the Relations of Modes, Mathematicians have framed many Axioms concerning that one Relation of Equality. As Equals taken from Equals, the Remainder will be Equals; which, with the rest of that Kind,

Thirdly, in other Relations we may

however they are received for Maxims by the Mathematicians, and are unquestionable Truths; yet, I think that any one who confiders them, will not find that they have a clearer felfevidence than these, That One and One are equal to Two: that if you take from the Pive Fingers of one Hand two, and from the Five Fingers of the other Hand two, the remaining Numbers will be equal. There, and a Thousand other fuch Propositions, may be found in Numbers, which, at the very first Hearing, force the Assent, and carry with 'em an equal, if not greater Clearness, than those mathematical Axioms.

§. 6. Fourthly. As to real Existence, fince that has no Connection with any other of our Ideas, but that of our felves, and of a first Being, we have in that, concerning the real Existence of all other Beings, not so much as demonstrative, much less a felf-evident Know-

Fourtbly, Coxcerning real Existence we barie none.

ledge; and therefore concerning those there are no Maxims. §. 8. In the next Place let us confider, what Influence these received Maxims have upon the other Parts of our Knowledge. The Rules established in the Schools, that all Reasonings are ex præcognitis & præconcessis, seem to lay the Foundation of all other Knowledge in these Maxims, and to suppose them to be pracognita; whereby, I think, are meant these two Things: First, That these Axioms

These Axions do not much influence our other Know. ledge.

are those Truths that are first known to the Mind. And, second-

ly, that upon them the other Parts of our Knowledge depend. S. 9. First, That they are not the Truths Because they first known to the Mind, is evident to Expeare not the rience, as we have shewn in another Place, B. I. Truths we Ch. II. Who perceives not, that a Child certainfirst knew. ly knows that a Stranger is not its Mother: that its Sucking Bottle is not the Rod, long before he knows that 'tis impossible for the same Thing to be, and not to be? And how many Truths are there about Numbers, which it is obvious to observe, that the Mind is persectly acquainted with, and fully convinced of, before it ever thought on these general Maxims, to which Mathematicians in their Arguings, do fometimes refer them? Whereof the Reason is very plain: For that which makes the Mind affent to fuch Propositions, being nothing else but the Perception it has of the Agreement or Difagreement of its Ideas, according as it finds them affirmed or denied one of another, in Words it understands, and every Idea being known to be what it is, and every two distinct Ideas being known not to be the same, it must necesfarily follow, that such self-evident Truths must be first known, which confift of Ideas that are first in the Mind; and the Ideas first in the Mind, 'tis evident, are those of particular Things, from whence, by flow Degrees, the Understanding proceeds to fome few general ones; which being taken from the ordinary and familiar Objects of Sense, are settled in the Mind, with general Names to them. Thus particular Ideas are first received and distinguished, and so Knowledge got about them; and next to them, the less general or specifick, which are next to particular: For abstract *Ideas* are not so obvious or easy to Children, or the yet unexercised Mind, as particular ones. If they feem to to grown Men, 'tis only because by constant and familiar Use they are made so: For when we nicely reflect upon them, we shall find, that general Ideas are Fictions and Contrivances of the Mind, that carry difficulty with them, and do not fo eafily offer themselves, as we are apt to imagine. For Example, Does it not require some Pains and Skill to form the general *Idea* of a *Triangle*, (which is yet none of the most abstract, comprehensive, and difficult) for it must be neither Oblique, nor Rectangle, neither Equilateral, Equicrural, or Scalenon; but all and none of these at once. In effect, it is something imperfect, that cannot exist; an Idea wherein some Parts of several different and inconsistent Ideas are put together. 'Tis true, the Mind, in this imperfect State, has need of fuch Ideas, and makes all

the haste to them it can, for the conveniency of Communication and Enlargement of Knowledge; to both which it is naturally very much inclined. But yet one has Reason to suspect such *Ideas* are Marks of our Impersection; at least this is enough to shew, that the most abstract and general *Ideas* are not those that the Mind is first and most easily acquainted with, nor such as its earliest Knowledge is conversant about.

§. 10. Secondly, From what has been faid, it plainly follows, that these magnified Maxims, are not the Principles and Foundations of all our other Knowledge. For if there be a great many other Truths, which have as much Self-evidence as they, and a great many that we know before them, it is impossible they.

Because on them the other Parts of our Knowledge do not depend.

should be the Principles from which we deduce all other Truths. Is it impossible to know that one and two are equal to three, but by Virtue of this, or some such Axiom, viz. The Whole is equal to all its Parts taken together? Many a one knows that one and two are equal to three, without having heard, or thought on that, or any other Axiom, by which it might be proved; and knows it as certainly as any other Man knows, that the Whole is equal to all its Parts, or any other Maxim, and all from the same Reason of Self-evidence: the Equality of those *Ideas* being as visible and certain to him without that, or any other Axiom, as with it, it needed no Proof to make it perceived. Nor after the Knowledge, That the Whole is equal to all its Parts, does he know that one and two are equal to three, better or more certainly than he did before. For if there be any Odds in those Ideas, the Whole and Parts are more obscure, or at least more difficult to be fettled in the Mind, than those of one, two and three. indeed, I think, I may ask these Men, who will needs have all Knowledge besides those general Principles themselves, to depend on general, innate, and Self-evident Principles, What Principle is requifite to prove, that one and one are two, that two and two are four, that three times two are fix? Which being known without any Proof, do evince, that either all Knowledge does not depend on certain pracognita, or general Maxims, called Principles, or else that these are Principles: and if these are to be counted Principles, a great part of Numeration will be fo. To which, if we add all the Self-evident Propositions which may be made about all our distinct Ideas, Principles will be almost infinite, at least innumerable, which

Men arrive to the Knowledge of at different Ages; and a great many of these innate Principles, they never come to know all their Lives. But whether they come in View of the Mind earlier or later, this is true of them, that they are all known by their native Evidence, are wholly independent, receive no Light, nor are capable of any Proof one from another; much less the more particular, from the more general; or the more simple, from the more compounded; the more fimple, and less abstract, being the most familiar, and the easier and earlier apprehended. But which ever be the clearest Ideas, the Evidence and Certainty of all such Propositions is in this, That a Man sees the same Idea to be the fame Idea, and infallibly perceives two different Ideas to be different Ideas. For when a Man has in his Understanding the Ideas of one and of two, the Idea of Yellow, and the Idea of Blue, he cannot but certainly know, that the Idea of one is the Idea of one, and not the Idea of two; and that the Idea of Yellow is the Idea of Yellow, and not the Idea of Blue. For a Man cannot confound the Ideas in his Mind, which he has diffinct: That would be to have them confused and distinct at the same Time, which is a Contradiction: and to have none distinct, is to have no use of our Faculties, to have no Knowledge at all. And therefore what Idea foever is affirmed of it felf, or whatsoever two entire distinct Ideas are denied one of another, the Mind cannot but affent to such a Proposition, as infallibly true, as soon as it understands the Terms, without Hesitation or need of Proof, or regarding those made in more general Terms, and called Maxims.

§. 11. What shall we then say? Are these What use general Maxims of no Use? By no Means; these general tho' perhaps their Use is not that which it maxims is commonly taken to be. But since doubthave. In the least of what hath been by some Men ascribed to these Maxims, may be apt to be cry'd out against, as overturning the Foundations of all the Sciences, it may be worth while to consider them, with respect to other Parts of our Knowledge, and examine more particularly to what Purposes they serve, and to what not.

1. It is evident from what has been already faid, that they are of no Use to prove or confirm less general self-evident Pro-

positions.

z. 'Tis as plain that they are not, nor have been the Foundations whereon any Science hath been built. There is, I know, a great deal of Talk, propagated from Scholastick Men, of Sciences and the Maxims on which they are built; But it has been my ill Luck, never to meet with any fuch Sciences; much less any one built upon these two Maxims, What is, is; and It is impossible for the same thing to be, and not to be. And I would be glad to be shewn where any such Science erected upon these, or any other general Axioms is to be found; and fhould be oblig'd to any one who would lay before me the Frame and System of any Science so built on these, or any such like Maxims, that could not be fhewn to fland as firm without any Confideration of them. I ask, Whether these general Maxims have not the same Use in the Study of Divinity, and in Theological Questions, that they have in the other Sciences? They ferve here too, to filence Wranglers, and put an end to Dispute. But I think that no Body will therefore fay, that the Christian Religion is built on these Maxims, or that the Knowledge we have of it, is derived from these Principles. 'Tis from Revelation we have received it, and without Revelation, these Maxims had never been able to help us to it. When we find out an Idea, by whose Intervention we discover the Connection of two others, this is a Revelation from God to us, by the Voice of Reason. For we then come to know a Truth that we did not know before. When God declares any Truth to us, this is a Revelation to us by the Voice of his Spirit, and we are advanced in our Knowledge. But in neither of these do we receive our Light or Knowledge from Maxims. But in the one the Things themselves afford it, and we see the Truth in them by perceiving their Agreement or Difagreement. In the other, God himfelf affords it immediately to us, and we fee the Truth of what he fays in his unerring Veracity.

3. They are not of use to help Men forward in the Advancement of Sciences, or new Discoveries of yet unknown Truths. Mr. Newton, in his never enough to be admired Book, has demonstrated several Propositions, which are so many new Truths, before unknown to the World, and are farther Advances in Mathematical Knowledge: But for the Discovery of these, it was not the general Maxim, What is,

is; or the Whole is bigger than a Part, or the like, that helped him. These were not the Clues that led him into the Discovery of the Truth and Certainty of those Propositi-Nor was it by them that he got the Knowledge of those Demonstrations; but by finding out intermediate Ideas, that shewed the Agreement or Disagreement of the Ideas, as expressed in the Propositions he demonstrated. This is the great Exercise and Improvement of Human Understanding in the enlarging of Knowledge, and advancing the Sciences; wherein they are far enough from receiving any Help from the Contemplation of these, or the like magnified Maxims. those who have this traditional Admiration of these Propofitions, that they think no Step can be made in Knowledge without the Support of an Axiom, no Stone laid in the building of the Sciences without a general Maxim, but diffinguish between the Method of acquiring Knowledge, and of communicating, between the Method of raifing any Science, and that of teaching it to others as far as it is advanced, they would fee that those general Maxims were not the Foundations on which the first Discoverers raised their admirable Structures, nor the Keys that unlocked and opened tirofe Se-Though afterwards, when Schools crets of Knowledge. were erected, and Sciences had their Profesiors to teach what others had found out, they often made use of Maxims, i. e. laid down certain Propositions which were Self-evident, or to be received for true, which being fettled in the Minds of their Scholars, as unquestionable Verities, they on occasion made use of, to convince them of Truths in particular Instances, that were not so familiar to their Minds as those general Axioms which had before been inculcated to them, and carefully fettled in their Minds. Though these particular Instances, when well reflected on, are no less Self-evident to the Understanding, than the general Maxims brought to confirm them: And it was in those particular Instances, that the first Discoverer found the Truth, without the help of the general Maxims: And fo may any one elfe do, who with Attention confiders them.

To come therefore to the Use that is made of Maxims.

1. They are of Use, as has been observed, in the ordinary Methods of teaching Sciences as far as they are advanced: But of little or none in advancing them farther.

2. They are of Use in Disputes, for the silencing of obstinate Wranglers, and bringing those Contests to some Conclusion.

clusion. Whether a need of them to that End, came not in, in the Manner following, I crave leave to Enquire. The Schools having made Disputation the Touch-stone of Mens Abilities, and the Criterion of Knowledge, adjudged Victory to him that kept the Field; and he that had the last Word, was concluded to have the better of the Argument, if not of the Cause. But because by this Means there was like to be no Decifion between skilful Combatants, whilst one never failed of a medius terminus to prove any Proposition, and the other could as constantly, without, or with a Distinction, deny the Major or Minor. To prevent, as much as could be, the running out of Disputes into an endless Train of Syllogisms, certain general Propositions, most of them indeed felf-evident, were introduced into the Schools; which being fuch as all Men allowed and agreed in, were looked on as general Measures of Truth, and served instead of Principles, (where the Disputants had not laid down any other between them) beyond which there was no going, and which must not be receded from by either Side. And thus these Maxims getting the Name of Principles, beyond which Men in Dispute could not retreat, were by Mistake taken to be the Originals and Sources from whence all Knowledge began, and the Foundations whereon the Sciences were built; because when in their Disputes they came to any of these, they stopped there, and went no further, the Matter was determined. But how much this is a Mistake, hath been already shewn.

This Method of the Schools, which have been thought the Fountains of Knowledge, introduced, as I suppose, the like Use of these Maxims, into a great part of Conversation out of the Schools, to stop the Mouths of Cavillers, whom any one is excused from arguing any longer with, when they deny these general self-evident Principles received by all reafonable Men, who have once thought of them; but yet their Use herein is but to put an End to Wrangling. They in Truth, when urged in fuch Cafes, teach nothing: that is already done by the intermediate Ideas made use of in the Debate, whose Connection may be seen without the Help of those Maxims, and so the Truth known before the Maxim is produced, and the Argument brought to a first Principle. Men would give off a wrong Argument before it came to that, if in their Disputes they proposed to themselves the finding and embracing of Truths, and not a Contest for Victory. And thus Maxims have their Use to put a Stop to their

er-

Perverseness, whose Ingenuity should have yielded sooner. But the Method of the Schools having allowed and encouraged Men to oppose and resist evident Truth, till they are baffled, i. e. till they are reduced to contradict themselves. or some established Principle; 'tis no Wonder that they should not, in civil Conversation, be ashamed of that which in the Schools is counted a Virtue and a Glory, viz. obstinately to maintain that Side of the Question they have chosen, whether true or false, to the last Extremity, even after Conviction. A strange way to attain Truth and Knowledge; and that which I think the rational Part of Mankind, not corrupted by Education, could scarce believe should ever be admitted amongst the Lovers of Truth, and Students of Religion or Nature, or introduced into the Seminaries of those who are to propagate the Truths of Religion or Philosophy amongst the Ignorant and Unconvinced. How much such a Way of Learning is likely to turn young Mens Minds from the fincere Search and Love of Truth; nay, and to make them doubt whether there is any fuch Thing, or at least worth the adhering to, I shall not now enquire. This I think, that bating those Places which brought the Peripatetick Philosophy into their Schools, where it continued many Ages, without teaching the World any thing but the Art of Wrangling; these Maxims were no where thought the Foundation on which the Sciences were built, nor the great Helps to the Advacement of Knowledge.

What Use these general Maxims have. As to these general Maxims therefore, they are, as I have said, of great Use in Disputes, to step the Mouths of the Wranglers; but not of much Use to the Discovery of unknown Truths, or to help the Mind forwards in its Search after

Knowledge: For whoever began to build his Knowledge on this general Proposition, What is, is; or it is impessible for the same thing to be, and not to be; and from either of these, as from a Principle of Science, deduced a System of useful Knowledge; wrong Opinions often involving Contradictions, one of these Maxims, as a Touch-stone, may serve well to shew whither they lead. But yet, however sit to lay open the Absurdity or Mistake of a Man's Reasoning or Opinion, they are of very little Use for enlightning the Understanding; and it will not be sound, that the Mind receives much Help from them in its Progress in Knowledge; which would be neither less, nor less certain, were these two general Propositions never thought on. 'Tis true, as I

have faid, they fometimes ferve in Argumentation to stop a Wrangler's Mouth, by shewing the Absurdity of what he faith, and by exposing him to the Shame of contradicting what all the World knows, and he himself cannot but own to be true. But it is one Thing to shew a Man that he is in an Error, and another to put him in Possession of Truth; and I would fain know what Truths these two Propositions are able to teach, and by their Influence make us know, which we did not know before, or could not know without them. Let us reason from them, as well as we can, they are only about identical Predications, and Influence, if any at all, none but fuch. Each particular Proposition concerning Identity or Diversity, is as clearly and certainly known in it self, if attended to, as either of these general ones; only these general ones, as ferving in all Cases, are therefore more inculcated and infifted on. As to other less general Maxims, many of them are no more than bare verbal Propositions, and teach us nothing but the Respect and Import of Names one to another. The Whole is equal to all its Parts: What real Truth, I beseech you, does it teach us? What more is contained in that Maxim, than what the Signification of the Word Totum, or the Whole, does of it felf import? And he that knows that the Word Whole stands for what is made up of all its Parts, knows very little lefs, than that the Whole is equal to all its Parts. And upon the fame Ground, I think that this Proposition, A Hill is higher than a Valley, and feveral the like, may also pass for Maxims. But yet Masters of Mathematicks, when they would, as Teachers of what they know, initiate others in that Science, do not without Reason place this, and some other such Maxims, at the Entrance of their Systems, that their Scholars, having in the Beginning perfectly acquainted their Thoughts with thefe Propositions made in such general Terms, may be used to make fuch Reflections, and have these more general Propositions, as formed Rules and Sayings, ready to apply to all particular Cases. Not that if they be equally weighed, they are more clear and evident than the particular Instances they are brought to confirm: But that being more familiar to the Mind, the very naming them is enough to fatisfy the Understanding. But this, I say, is more from our Custom of using them, and the Establishment they have got in our Minds, by our often thinking of them, than from the different Evidence of the Things. But before Custom has settled Methods of Thinking and Reasoning in our Minds, I am

apt to imagine it is quite otherwise; and that the Child. when a part of his Apple is taken away, knows it better in that particular Instance, than by this general Proposition, The Whole is equal to all its Parts; and that if one of these have need to be confirmed to him by the other, the general. has more need to be let into his Mind by the particular, than the particular by the general. For in particulars, our Knowledge begins, and so spreads it self by Degrees, to Generals; though afterwards the Mind takes the quite contrary Course, and having drawn its Knowledge into as general Propositions as it can, makes those familiar to its Thoughts, and accustoms it self to have recourse to them, as to the Standards of Truth and Falshood. By which familiar Use of them, as Rules to measure the Truth of other Propositions, it comes in time to be thought, that more particular Propositions have their Truth and Evidence from their Conformity to these more general ones, which, in Discourse and Argumentation, are so frequently urged, and constantly admitted. And this I think to be the Reafon why among fo many felf-evident Propositions, the most general only have had the Title of Maxims.

Maxims, if Care be not taken in the Use of Words, may prove Contradistions. §. 12. One thing farther, I think, it may not be amiss to observe concerning these general Maxims, that they are so far from improving or establishing our Minds in true Knowledge, that if our Notions be wrong, loose, or unsteddy, and we resign up our Thoughts to the Sound of Words, rather than fix them on settled determined *Ideas* of Things; I say

these general Maxims will serve to confirm us in Mistakes; and in fuch a way of Use of Words which is most common, will serve to prove Contradictions: v. g. He that with Des Cartes shall frame in his Mind an Idea of what he calls Body, to be nothing but Extension, may easily demonstrate, that there is no Vacuum, i. e. no Space void of Body, by this Maxim, What is, is: For the Idea to which he annexes the Name Body, being bare Extension, his Knowledge that Space cannot be without Body is certain: For he knows his own Idea of Extension clearly and distinctly, and knows that it is what it is, and not another Idea, though it be called by these Three Names, Extension, Body, Space. Which Three Words standing for one and the same Idea, may no doubt, with the same Evidence and Certainty, be affirmed one of another, as each of it felf: And it is as certain, that whilft Ι I use them all to stand for one and the same Idea, this Predication is as true and identical in its Signification, That Space is Body, as this Predication is true and identical, that Body is Body, both in Signification and Sound.

§. 13. But if another shall come, and make to himself another *Idea*, different from *Des Cartes*'s of the Thing, which yet, with *Des Cartes*,

Instance in Vacuum.

he calls by the same Name Body, and make his Idea, which he expresses by the Word Body, to be of a Thing that hath both Extension and Solidity together, he will as easily demonstrate, that there may be a Vacuum, or Space without a Body, as Des Cartes demonstrated the contrary. Because the Idea to which he gives the Name Space, being barely the simple one of Extension; and the Idea, to which he gives the Name Body, being the complex Idea of Extension and Refistibility, or Solidity together in the same Subject, these two Ideas are not exactly one and the same, but in the Understanding as distinct as the Ideas of One and Two, White and Black, or as of Corporeity and Humanity, if I may use those barbarous Terms: And therefore the Predication of them in our Minds, or in Words standing for them, is not identical, but the Negation of them one of another; viz. this Proposition, Extension, or Space is not Body, is as true and evidently certain, as this Maxim, It is impossible for the same Thing to be, and not to be, can make any Proposition.

§. 14. But yet, though both these Propositions (as you see) may be equally demonstrated, viz. that there may be a Vacuum, and that there cannot be a Vacuum, by these two certain

They prove not the Existence of Things without us.

Principles, (viz.) What is, is, and the fame Thing cannot be, and not be; yet neither of these Principles will terve to prove to us, that any, or what Bodies do exist: For that we are left to our Senses, to discover to us as far as they Those universal and self-evident Principles, being only our constant, clear, and distinct Knowledge of our own Ideas, more general or comprehensive, can assure us of nothing that passes without the Mind, their Certainty is founded only upon the Knowledge we have of each Idea by it felf, and of its Distinction from others; about which we cannot be mistaken whilst they are in our Minds, though we may, and often are mistaken, when we retain the Names without the Ideas, or use them confusedly, sometimes for one, and sometimes for another Idea. In which Cases, the Force of these Axioms, reaching only to the Sound, and not the Significa-Vol. II. tion

tion of the Words, ferves only to lead us into Confusion, Miflake, and Error. 'Tis to fliew Men, that these Maxims. however cry'd up for the great Guards to Truth, will not fecure them from Error in a careless loose Use of their Words, that I have made this Remark. In all that is here suggested concerning their little Use for the Improvement of Knowledge, or dangerous Use in undetermined Ideas, I have been far enough from faying or intending they should be laid afide, as some have been too forward to charge me. I affirm them to be Truths, felf-evident Truths; and fo cannot be laid afide. As far as their Influence will reach, 'tis in vain to endeavour, nor would I attempt to abridge it. But yet without any Injury to Truth, or Knowledge, I may have Reason to think their Use is not answerable to the great Stress which seems to be laid on them, and I may warn Men not to make an ill Use of them, for the confirming themselves in Error.

Their Application dangerous about complex Ideas.

§. 15. But let them be of what *Use* they will in verbal Propositions, they cannot discover or prove to us the least Knowledge of the Nature of Substances, as they are found and exist without us, any farther than grounded on

Experience. And though the Consequence of these two Propositions, called Principles, be very clear, and their Use not dangerous or hurtful, in the Probation of such Things, wherein there is no need at all of them for Proof, but fuch as are clear by themselves without them, viz. where our Ideas are determined, and known by the Names that stand for them: Yet when these Principles, viz. What is, is; and, It is impossible for the same Thing to be, and not to be, are made use of in the Probation of Propositions, wherein are Words flanding for complex Ideas, v. g. Man, Horse, Gold, Vertue; there they are of infinite Danger, and most commonly make Men receive and retain Falshood for manifest Truth, and Uncertainty for Demonstration: upon which follows Error, Obstinacy, and all the Mischies that can happen from wrong Reafoning. The Reafon whereof is not, that these Principles are less true, or of less Force in proving Propositions made of Terms standing for complex Ideas, than where the Propositions are about simple Ideas. But because Men mistake generally, thinking that where the fame Terms are preferved, the Propositions are about the same Things, tho' the Ideas they stand for, are in Truth different. these Maxims are made use of to support those, which in Sound and Appearance are contradictory Propositions; as is clear

clear in the Demonstrations above-mentioned about a Vacuum. So that whillt Men take Words for Things, as usually they do, these Maxims may and do commonly serve to prove contradictory Propositions: As shall yet be farther made manifest.

§. 16. For Inflance: Let Man be that concerning which you would by these first Princi-Inflance in ples demonstrate any thing, and we shall see, that fo far as Demonstration is by these Principles, it is only verbal, and gives us no certain univerfal true Proposition or Knowledge of any Being existing without us. First, a Child having framed the Idea of a Man, it is probable, that his Idea is just like that Picture which the Painter makes of the vifible Appearances joined together; and fuch a Complication of *Ideas* together in his Understanding, makes up the fingle complex Idea which he calls Man, whereof White or Flesh-Colour in England being one, the Child can demonstrate to you, that a Negro is not a Man, because White Colour was one of the constant simple *Ideas* of the complex *Idea* he calls *Man*: And therefore he can demonstrate by the Principle, it is impossible for the same Thing to be, and not to be, that a Negro is not a Man; the Foundation of his Certainty being not that universal Proposition, which, perhaps, he never heard nor thought of, but the clear distinct Perception he hath of his own simple Ideas of Black and White, which he cannot be perfuaded to take, nor can ever mistake one for another, whether he knows that Maxim or no: And to this Child, or any one who hath fuch an Idea, which he calls Man, can you never demonstrate that a Man hath a Soul, because his Idea of Man includes no such Notion or Idea in it. And therefore to him, the Principle of What is, is, proves not this Matter; but it depends upon Collection and Observation, by which he is to make his complex Idea called Man.

§. 17. Secondly, Another that hath gone farther in framing and collecting the *Idea* he calls *Man*, and to the outward Shape adds *Laughter* and rational Discourse, may demonstrate, that Infants and Changelings are no Men, by this Maxim, *It is impossible for the same Thing to be, and not to be:* And I have discoursed with very rational Men, who

have actually deny'd that they are Men.

§. 18. Thirdly, Perhaps another makes up the complex Idea which he calls Man, only out of the Ideas of Body in general, and the Powers of Language and Reason, and leaves out the Shape wholly: This Man is able to demonstrate, that a Man may have no Hands, but be Quadrupes, neither of those being included in his Idea of Man; and in whatever Body or Shape he sound Speech and Reason joined, that was a Man: Because having a clear Knowledge of such a complex Idea, it is certain that What is, is.

Little use of these Maxims in Proofs cohere we have clear and distinst Ideas. §. 19. So that, if rightly confidered, I think we may fay, that where our *Ideas* are determined in our Minds, and have annexed to them by us known and fleady Names under those settled Determinations, there is little Need, or no Use at all of these Maxims, to prove the Agreement or Disagreement of any of them. He that cannot discern the Truth or light Propositions, without the Halp of these

Falshood of such Propositions, without the Help of these, and the like Maxims, will not be helped by these Maxims to do it: Since he cannot be supposed to know the Truth of these Maxims themselves without Proof, if he cannot know the Truth of others without Proof, which are as felf-evident Upon this Ground it is, that intuitive Knowledge neither requires nor admits any Proof, one part of it more than another. He that will suppose it does, takes away the Foundation of all Knowledge and Certainty: And he that needs any Proof to make him certain, and give his Affent to this Proposition, that Two are equal to Two, will also have need of a Proof to make him admit, that What is, is. He that needs a Probation to convince him, that Two are not Three, that White is not Black, that a Triungle is not a Circle, &c. or any other two determined distinct Ideas are not one and the fame, will need also a Demonstration to convince him, that it is impossible for the same Thing to be, and not to be.

Their use dangerous where our Ideas are confused. §. 20. And as these Maxims are of little Use where we have determined Ideas, so they are, as I have shewed, of dangerous Use where our Ideas are not determined; and where we use Words that are not annexed to determined Ideas, but such as are of a loose and wandring Signification, sometimes standing for one, and

fometimes for another *Idea*: from which follows Mistake and Error, which these Maxims (brought as Proofs to establish

Propositions, wherein the Terms stand for undetermined Ideas) do by their Authority confirm and rivet.

CHAP. VIII.

Of Trifling Propositions.

§. 1. W Hether the Maxims treated of in the foregoing Chapter, be of that Use to real Knowledge as is generally suppofed, I leave to be confidered. This, I think, may confidently be affirmed, that there are univerfal Propositions, which tho' they be certainly true, yet they add no Light to our Understandings.

ledge.

Some Propo-

fitions bring

no Increase to

our Know-

bring no Increase to our Knowledge. Such are, §. 2. First, All purely identical Propositions. These obviously, and at first blush, appear to contain no Instruction in them: For when we affirm the faid Term of it felf, whe-

As first, Identical Propositions.

ther it be barely verbal, or whether it contains any clear and real Idea, it shews us nothing but what we must certainly know before, whether fuch a Proposition be either made by. or proposed to us. Indeed, that most general one, What is, is, may ferve fometimes to shew a Man the Absurdity he is guilty of, when by Circumlocution, or equivocal Terms, he would in particular Inflances, deny the fame Thing of it felf; because no Body will so openly bid Defiance to common Sense, as to affirm visible and direct Contradictions in plain Words: Or if he does, a Man is excused if he breaks off any farther Discourse with him. But yet, I think, I may fay, that neither that received Maxim, nor any other identical Proposition teaches us any thing: And tho' in fuch kind of Propositions, this great and magnified Maxim, boafled to be the Foundation of Demonstration, may be, and often is made use of to confirm them, yet all it proves, amounts to no more than this, That the same Word may with great Certainty be affirmed of it felf, without any doubt of the Truth of any fuch Proposition; and let me add alfo, without any real Knowledge.

§. 3. For at this Rate, any very ignorant Person, who cast but make a Proposition, and knows what he means when he fays, Ay or No, may make a Million of Propositions, of whose Truths he may be infallibly certain, and yet not know one Thing in the World thereby; v. g. what is a Soul, is a Soul; or a Soul is a Soul, a Spirit is a Spirit; a Fetiche is a Fetiche, &c. These all being equivalent to this Proposition. viz. What is, is; i. e. what hath Existence, hath Existence; or who hath a Soul, hath a Soul. What is this more than trisling with Words? It is but like a Monkey shifting his Oyster from one Hand to the other; and had he had but Words, might, no doubt, have said, Oyster in right Hand is Subject, and Oyster in Lest Hand is Predicate: and so might have made a self-evident Proposition of Oyster, i. c. Oyster is Oyster; and yet with all this, not have been one whit the wiser, or more knowing: And that way of handling the Matter, would much at one have satisfied the Monkey's Hunger, or a Man's Understanding; and they two would have improved in Knowledge

and Bulk together.

I know there are fome, who because identical Propositions are felf-evident, them a great concern for them, and think they do great Service to Philosophy by crying them up, as if in them was contained all Knowledge, and the Understanding were led into all Truth by them only. I grant, as forwardly as any one, that they are all true, and felf-evident. I grant farther, that the Foundation of all our Knowledge lies in the Faculty we have of perceiving the same Idea to be the same, and of discerning it from those that are different, as I have shewn in the foregoing Chapter. But how that vindicates the making use of identical Propositions, for the Improvement of Knowledge, from the Imputation of Trifling, I do not fee. Let any one repeat, as often as he pleases, that the Will is the Will, or lay what Stress on it he thinks fit; of what Use is this, and an infinite the like Propositions, for the enlarging our Knowledge? Let a Man abound as much as the plenty of Words which he has, will permit him in fuch Propositions as these; A Law is a Law, and Obligation is Obligation; Right is Right, and Wrong is Wrong; will these and the like ever help him to an Acquaintance with Ethicks? Or instruct him or others, in the Knowledge of Morality? Those who know not, nor perhaps ever will know, what is Right, and what is Wrong, nor the Measures of them, can with as much Assurance make and infallibly know the Truth of these and all such Propositions, as he that is best instructed in Morality can do. But what Advance do such Propositions give in the Knowledge of any thing necessary or useful for their Conduct?

He would be thought to do little less than trifle, who for the enlightning the Understanding in any part of Knowledge, fhould be bufy with identical Propositions, and insist on such Maxims as these; Substance is Substance, and Body is Body; a Vacuum is a Vacuum, and a Vortex is a Vortex; a Gentaur is a Centaur, and a Chimæra is a Chimæra, &c. For thefe, and all fuch, are equally true, equally certain, and equally felf-evident. But yet they cannot but be counted trifling, when made use of as Principles of Instruction, and Stress laid on them, as Helps to Knowledge; fince they teach nothing but what every one, who is capable of Discourse, knows without being told, viz. That the same Term is the same Term, and the fame *Idea* the fame *Idea*. And upon this Account it was that I formerly did, and fo still think, the offering and inculcating fuch Propositions, in order to give the Understanding any new Light or Inlet into the Knowledge of Things, no better than trifling.

Instruction lies in something very different, and he that would enlarge his own, or another's Mind, to Truths he does not yet know, must find out intermediate Ideas, and then lay them in such Order one by another, that the understanding may see the Agreement or Disagreement of those in Question. Propositions that do this, are instructive: But they are far from such as affirm the same Term of it self; which is no way to advance ones self or others in any fort of Knowledge. It no more helps to that, than it would help any one in his learning to read, to have such Propositions as these inculcated to him, an Ais an A, and a B is a B; which a Man may know as well as any School-Master, and yet never be able to read a Word as long as he lives. Nor do these, or any such identical Propositions, help him one jot forwards in the Skill of Reading, let him make what Use of them he can.

If those who blame my calling them trifling Propositions, had but read, and been at the Pains to understand what I had above writ in very plain English, they could not but have seen that by identical Propositions, I mean only such wherein the same Term importing the same Idea, is affirmed of it self; Which I take to be the proper Signification of identical Propositions; and concerning all such, I think I may continue safely to say, That to propose them as instructive, is no better than trisling. For no one who has the Use of Reason, can miss them, where it is necessary they should be taken Notice of; nor doubt of their Truth, when he does take Notice of them.

But if Men will call *Propositions identical*, wherein the same Term is not affirmed of it self, whether they speak more proposty than I, others may judge: This is certain, all that they say of Propositions that are not *identical*, in my Sense, concerns not me, nor what I have said; all that I have said relating to those Propositions, wherein the same Term is affirmed of it self. And I would sain see an Instance, wherein any such can be made use of, to the Advantage and Improvement of any one's Knowledge. Instances of other kinds, whatever Use may be made of them, concern not me, as not being such as I call *identical*.

§. 4. Secondly, Another fort of Trifling Pro-2dly. When a part of any politions is, when a part of the complex Idea is predicated of the Name of the IV hole; a part of complex Idea is predicated the Definition of the Word defined. Such are all of the whole. Propositions wherein the Genus is predicated of the Species, or more comprehensive of less comprehensive Terms: For what Information, what Knowledge carries this Proposition in it, viz. Lead is a Metal, to a Man who knows the complex Idea the Name Lead stands for? All the simple Ideas that go to the complex one fignified by the Term Metal, being nothing but what he before comprehended, and fignified by the Name Lead. Indeed, to a Man that knows the Signification of the Word Metal, and not of the Word Lead, it is a shorter way to explain the Signification of the Word Lead, by faying it is a Metal, which at once expresses several of its fimple Ideas, than to enumerate them one by one, telling him it is a Body very beavy, fufible and malleable.

§. 5. A like trifling it is, to predicate any As part of the Definition of other part of the Definition of the Term de-the Term defined, or to affirm any one of the simple Ideas of a complex one, of the Name of the whole comfined. plex Idea; as All Gold is fufible. For Fufibility being one of the fimple Ideas that goes to the making up the complex one the Sound Gold stands for, what can it be but playing with Sounds, to affirm that of the Name Gold, which is comprehended in its received Signification? 'T would be thought little better than ridiculous, to affirm gravely, as a Truth of Moment, That Gold is Yellow; and I fee not how it is any jot more material to fay, It is fufible, unless that Quality be lest out of the complex Idea, of which the Sound Gold is the Mark in ordinary Speech. What Instruction can it carry with it, to tell one that which he hath been told already, or he is supposed to know before? For I am supposed to know the Signification of the Word another uses to me, or else he is

caufe

to tell me. And if I know that the Name Gold stands for this complex Idea of Body, yellow, heavy, fufible, malleable, 'twill not much instruct me to put it solemnly afterwards in a Proposition, and gravely say, All Gold is fusible. Such Propositions can only serve to shew the Disingenuity of one, who will go from the Definition of his own Terms, by reminding him sometimes of it; but carry no Knowledge with them, but of the Signification of Words, however certain they be.

§. 6. Every Man is an Animal, or living Body, is as certain a Proposition as can be; but no more conducing to the Knowledge of Things,

than to fay, A Palfry is an ambling Horse, or a neighing ambling Animal, both being only about the Signification of Words, and make me know but this, That Body, Senfe, and Motion, or Power of Sensation and Moving, are Three of those Ideas that I always comprehend and fignify by the Word Man; and where they are not to be found together, the Name Man belongs not to that Thing: And so of the other, that Body, Sense, and a certain way of going, with a certain kind of Voice, are some of those Ideas which I always comprehend, and fignify by the Word Palfry; and when they are not to be found together, the Name Palfry belongs not to that Thing. 'Tis just the same, and to the same Purpose, when any Term standing for any one or more of the simple Ideas, that altogether make up that complex Idea which is called a Man, is affirmed of the Term Man; v.g. suppose a Roman fignified by the Word Homo, all these distinct Ideas united in one Subject, Corporeitas, Sensibilitas, Potentia se movendi, Rationalitas, Risibilitas, he might, no doubt, with great Certainty, univerfally affirm one, more, or all of these together of the Word Homo, but did no more than fay, that the Word Homo, in his Country, comprehended in its Signification all these Ideas. Much like a Romance-Knight, who by the Word Palfry fignified these Ideas; Body of a certain Figure, Four legged, with Sense, Motion, Ambling, Neighing, White, used to have a Woman on his Back, might with the same Certainty. universally affirm also any or all of these of the Word Palfry: But did thereby teach no more, but that the Word Palfry in his, or Romance Language, stood for all these, and was not to be applyed to any Thing, where any of these was wanting. But he that shall tell me, that in whatever Thing Sense, Motion, Reason, and Laughter were united, that Thing had actually a Notion of God, or would be cast into a Sleep by Opium, made indeed an instructive Proposition; because neither having the Notion of God, nor being cast into sleep by Opium, being contained in the Idea signified by the Word Man, we are by such Propositions taught something more than barely what the Word Man stands for: And therefore the Knowledge contained in it, is more than werbal.

For this teaches but the Signification of Words. §. 7. Before a Man makes any Proposition, he is supposed to understand the Terms he uses in it, or else he talks like a Parrot, only making a Noise by Imitation, and framing certain Sounds which he has learnt of others; but not as a rational Creature, using them for

Signs of *Ideas* which he has in his Mind. The Hearer alfo is supposed to understand the Terms as the Speaker uses them, or else he talks Jargon, and makes an unintelligible Noise. And therefore he trifles with Words, who makes such a Proposition, which when it is made, contains no more than one of the Terms does, and which a Man was supposed to know before, v. g. a Triangle hath three Sides, or Saffron is yellow. And this is no farther tolerable, than where a Man goes to explain his Terms, to one who is supposed, or declares himself not to understand him: And then it teaches only the Signification of that Word, and the Use of that Sign.

Sorts of Propositions, with perfect Certainty; the one is, of those trifling Propositions which

have a Certainty in them, but 'tis only a werbal Certainty, but not instructive. And, Secondly, we can know the Truth, and so may be certain in Propositions, which affirm something of another, which is a necessary Consequence of its precise complex Idea, but not contained in it. As that the external Angle of all Triangles, is bigger than either of the opposite internal Angles; which Relation of the outward Angle, to either of the opposite internal Angles, making no part of the complex Idea signified by the Name Triangle; This is a real Truth, and conveys with it instructive real Knowledge.

General Propositions concerning Substances, are often trifling. §. 9. We have little or no Knowledge of what Combinations there be of fimple *Ideas* exifting together in Subflances, but by our Senfes, we cannot make any universal *certain* Propositions concerning them, any farther than

than our nominal Essences lead us; which being to a very few and inconfiderable Truths, in respect of those which depend on their real Constitutions, the general Propositions that are made about Substances, if they are certain, are for the most part but trifling; and if they are instructive, are uncertain, and fuch as we can have no Knowledge of their real Truth, how much foever conftant Observation and Analogy may affift our Judgments in gueffing. Hence it comes to pais, that one may often meet with very clear and coherent Difcourses, that amount yet to nothing. For 'tis plain, that Names of substantial Beings, as well as others, as far as they have relative Significations affixed to them, may with great Truth, be joined negatively and affirmatively in Propositions, as their relative Definitions make them fit to be so joined; and Propositions confisting of such Terms, may, with the same Clearness, be deduced one from another, as those that convey the most real Truths; and all this, without any Knowledge of the Nature or Reality of Things existing without us. By this Method, one may make Demonstrations and undoubted Propositions in Words, and yet thereby advance not one jot in the Knowledge of the Truth of Things; v. g. he that having learned these following Words with their ordinary mutual relative Acceptations annexed to them, v.g. Substance, Man, Animal, Form, Soul, Vegetative, Sensitive, Rational, may make feveral undoubted Propositions about the Soul, without knowing at all what the Soul really is; and of this Sort, a Man may find an infinite Number of Propositions, Reasonings and Conclusions, in Books of Metaphysicks, School-Divinity, and fome fort of natural Philosophy; and after all, know as little of God, Spirits or Bodies, as he did before he fet out.

§. 10. He that hath Liberty to define, i. e. determine the Signification of his Names of And coby.

Substances, (as certainly every one does in Ef-

feet, who makes them fland for his own Ideas) and makes their Significations at a venture, taking them from his own or other Mens Fancies, and not from an Examination or Enquiry into the Nature of Things themselves, may with little Trouble demonstrate them one of another, according to those feveral Respects, and mutual Relations he has given them one to another; wherein, however Things agree, or difagree, in their own Nature, he needs mind nothing but his own Notions, with the Names he hath bestowed upon them: But thereby no more increases his own Knowledge, than he does

his Riches, who taking a Bag of Counters, calls one in a certain Place, a *Pound*; another in another Place, a *Shilling*; and a third in a third Place, a *Pouny*; and fo proceeding, may undoubtedly reckon right, and caft up a great Sum, according to his Counters fo placed, and flanding for more or lefs, as he pleafes, without being one jot the richer, or without even knowing how much a Pound, Shilling, or Penny is, but only that one is contained in the other Twenty Times, and contains the other Twelve; which a Man may also do in the Signification of Words, by making them in respect of one another more or lefs, or equally comprehensive.

Thirdly,
Ufing Words
variously, is
trifling with
them.

§. 11. Though yet concerning most Words used in Discourses, especially argumentative and controversial, there is this more to be complained of, which is the worst fort of Trisling, and which sets us yet farther from the Certainty of Knowledge we hope to attain by them, or viz. that most Writers are so far from instruct-

find in them, viz. that most Writers are so far from instructing us in the Nature and Knowledge of Things, that they ask their Words loofely and uncertainly, and do not, by using them constantly and steddily in the same Significations, make plain and clear Deductions of Words one from another, and make their Discourses coherent and clear, (how little soever it were instructive) which were not difficult to do, did they not find it convenient to shelter their Ignorance or Obstinacy, under the Obscurity and Perplexedness of their Terms: To which, perhaps, Inadvertency and ill Custom do in many Men much contribute.

Marks of verbal Propositi§. 12. To conclude, barely verbal Propositions may be known by these following Marks: First, All Propositions, wherein two abstract Terms are affirmed one of another, are barely about the Signification of Sounds. For fince no abstract Idea can be the same with any other but

it felf, when its abstract Name is affirmed of

First, Predication in abstract.

any other Term, it can fignify no more but this, that it may, or ought to be called by that Name; or that these Two Names signify the same Idea. Thus should any one say, that Parsimony is Frugality, that Gratitude is Justice; that this or that Action is or is not Temperance; however specious these and the like Propositions may at first Sight seem, yet when we come to press them, and examine nicely what they contain, we shall find, that it all amounts to nothing, but the Signification of those Terms.

S. 13. Secondly, All Propositions, wherein a part of the complex Idea, which any Term stands for, is predicated of that Term, are only verbal, v. g. to fay, that Gold is a Metal, or heavy. And thus all Propositions, wherein more comprehensive Words, called Genera, are affirmed of subordinate, or less comprehensive, called Species

Secondly, A part of the Definition predicated of any Term.

or *Individuals*, are barely verbal. When by these two Rules, we have examined the Proposi-

tions that make up the Discourses we ordinarily meet with, both in and out of Books, we shall, perhaps, find that a greater part of 'em than is usually suspected, are purely about the Signification of Words, and contain nothing in 'em, but the

Use and Application of these Signs.

This, I think, I may lay down for an infallible Rule, that where-ever the diffinct Idea any Word stands for, is not known and confidered, and fomething not contained in the Idea, is not affirmed, or denied of it, there our Thoughts flick wholly in Sounds, and are able to attain no real Truth or Falshood. This, perhaps, if well heeded, might fave us a great deal of uscless Amusement and Dispute; and very much shorten our Trouble and Wandring in the fearch of real and true Knowledge.

CHAP. IX.

Of our Knowledge of Existence.

§. 1. H Itherto we have only confidered the Effences of Things, which being only abstract Ideas, and thereby removed in our Thoughts from particular Existence, (that being the proper Operation of the Mind, in

General certain Propolitions, concern not Existence.

Abstraction, to consider an Idea under no other Existence, but what it has in the Understanding) gives us no Knowledge of real Existence at all. Where, by the Way, we may take Notice, that univerful Propositions, of whose Truth or Falfhood we can have certain Knowledge, concern not E_{x-} istence; and farther, that all particular Affirmations or Nogations, that would not be certain, if they were made general, are only concerning Existence; they declaring only the accidental Union or Separation of Ideas in Things existing, which in their abstract Natures, have no known necessary

Union or Repugnancy.

S. 2. But leaving the Nature of Propositions, and different ways of Predication, to be con-A threefold fidered more at large in another Place, let us Knowledge of Existence. proceed now to enquire concerning our Knowledge of the Existence of Things, and how we I fay then, that we have the Knowledge of our come by it. gwn Existence by Intuition; of the Existence of GOD by

Demonstration; and of other Things by Sensation. §. 3. As for our own Existence, we perceive it so plainly, and so certainly, that it neither Our Knowneeds, nor is capable of any Proof. For noledge of our own Existence thing can be more evident to us, than our own Existence. I think, I reason, I feel Pleasure is intuitive. and Pain: Can any of these be more evident to me, than my own Existence? If I doubt of all other Things, that very Doubt makes me perceive my own Existence, and will not suffer me to doubt of that. For if I know I feel Pain, it is evident I have as certain Perception of my own Existence, as of the Existence of the Pain I feel: Or if I know I doubt, I have as certain Perception of the Existence of the Thing doubting, as of that Thought which I call doubt. Experience then convinces us, that we have an intuitive Knowledge of our own Existence, and an internal infallible Perception that we are. In every Act of Sensation, Reasoning or Thinking, we are conscious to our selves of our own Being; and, in this Matter, come not short of the highest Degree of Certainty.

CHAP. X.

Of our Knowledge of the Existence of a GOD.

§. 1. T Hough GOD has given us no innate *Ideas* of himself; though he has stamped no original Characters on our Minds, wherein we may read his Being; yet having furnished us with those Faculties our Minds are endowed with, he hath not left himfelf without Witness; fince we have Sense, Per-

We are capable of knowing certainly that there is a GOD.

ception, and Reason, and cannot want a clear Proof of him, as long as we carry our felves about us. Nor can we juftly complain of our Ignorance in this great Point, fince he has fo plentifully provided us with the Means to discover, and know him, fo far as is necessary to the End of our Being, and the great concernment of our Happiness. But though this be the most obvious Truth that Reason discovers, and though its Evidence be (if I mistake not) equal to mathematical Certainty; yet it requires Thought and Attention, and the Mind must apply it self to a regular Deduction of it from some part of our intuitive Knowledge, or else we shall be as uncertain and ignorant of this, as of other Propositions, which are in themselves capable of clear Demonstration. To shew therefore, that we are capable of knowing, i. e. being certain that there is a GOD, and how we may come by this Certainty, I think we need go no farther than our felves, and that undoubted Knowledge we have of our own Existence.

§. 2. I think it is beyond Question, that Man has a clear Perception of his own Being; he Man knows knows certainly, that he exists, and that he is that be himfelf is. fomething. He that can doubt, whether he be any thing or no, I speak not to, no more than

I would argue with pure Nothing, or endeavour to convince Non-entity, that it were fomething. If any one pretends to be fo sceptical, as to deny his own Existence, (for really to doubt of it, is manifeftly impossible) let him for me enjoy his beloved Happiness of being Nothing, until Hunger, or some other Pain convince him of the contrary. This then, I think,

I may take for a Truth, which every one's certain Knowledge affures him of beyond the Liberty of doubting, viz. that he is

fomething that actually exists.

He knows alfo, that Nothing camot produce a Being, therefore fomething eternal. §. 3. In the next Place, Man knows by an intuitive Certainty, that bare Nothing can no more produce any real Being, than it can be equal to two right Angles. If a Man knows not that Non-entity, or the Absence of all Being, cannot be equal to two right Angles, it is impossible he should know any Demonstration in Euclid. If therefore we know there is some real Being, and that Non-entity cannot produce

any real Being, It is an evident Demonstration, that from Eternity there has been fomething; fince what was not from Eternity, had a Beginning; and what had a Beginning, must

be produced by fomething elfe.

That eternal Being must be most powerful.

§. 4. Next, it is evident, that what had its Being and Beginning from another, must also have all that which is in, and belongs to its Being from another too. All the Powers it has, must be owing to, and received from the same

Source. This eternal Source then of all Being, must also be the Source and Original of all Power; and so this eternal Being must be also the most powerful.

And most

knowing.

§. 5. Again, a Man finds in himself *Perception* and *Knowledge*. We have then got one Step farther; and we are certain now, that there is not only some Being, but some knowing

intelligent Being in the World.

There was a Time then when there was no knowing Being, and when Knowledge began to be; or elfe, there has been also a knowing Being from Eternity. If it be said, there was a Time when no Being had any Knowledge, when that eternal Being was void of all Understanding: I reply, that then it was impossible there should have ever been any Knowledge. It being as impossible that Things wholly void of Knowledge, and operating blindly, and without any Perception, should produce a knowing Being, as it is impossible, that a Triangle should make it self, Three Angles bigger than Two right ones. For it is as repugnant to the Idea of senseles Matter, that it should put into it self Sense, Perception, and Knowledge, as it is repugnant to the Idea of a Triangle, that it should put into it self greater Angles than two ngles eres,

§. 6. Thus from the Confideration of our felves, and what we infallibly find in our own Conflitutions, our Reason leads us to the fore God. Knowledge of this certain and evident Truth,

That there is an eternal, most powerful, and most knowing Being; which whether any one will please to call God, it matters not. The thing is evident, and from this Idea duly confidered, will eafily be deduced all those other Attributes which we ought to afcribe to this eternal Being. If nevertheless any one should be found so senselesly arrogant, as to suppose Man alone, knowing and wife, but yet the Product of mere Ignorance and Chance; and that all the rest of the Univerte acted only by that blind Hap-Hazard: I shall leave with him that very rational and emphatical Rebuke of Tully, L. 2. de Leg. to be confidered at his Leisure, 'What can be 6 more fillily arrogant and misbecoming, than for a Man to think that he has a Mind and Understanding in him, but vet in all the Universe beside, there is no such thing? Or that those Things, which with the utmost stretch of his Reafon, he can fcarce comprehend, should be moved and ' managed without any Reason at all?' Quid oft enim verius, quam neminem effe opportere tam stulte arrogantem, ut in se mentem & rationem putet inesse, in coelo mundog; non putct? Aut ea quæ vix summa ingenii ratione comprehendat, nulla ratione moveri putet?

From what has been faid, it is plain to me, we have a more certain Knowledge of the Existence of a God, than of any thing our Senses have not immediately discovered to us. Nay, I presume I may say, that we more certainly know that there is a God, than that there is any thing else without us. When I say we know, I mean there is such a Knowledge within our reach, which we cannot mis, if we will but apply our Minds

to that, as we do to feveral other Enquiries.

§. 7. How far the Idea of a most perfect Being, which a Man may frame in his Mind, does, or does not prove the Existence of a God, I will not here examine. For in the different Make of Mens Tempers, and Application of their Thoughts, some Arguments prevail more on one, and some on another, for the

Our Idea of a most perfect Being, not the sole Proof of a God.

Confirmation of the fame Truth. But yet I think, this I may fay, That it is an ill Way of establishing this Truth, and filencing Atheists, to lay the whole Stress of so important a Point as this, upon that sole Foundation: And take some Vol. II.

Mens having that Idea of God in their Minds, (for 'tis evident, fome Men have none, and fome worse than none, and the most very different) for the only Proof of a Deity; and out of an Over-fondness of that darling Invention, cashier, or at least endeavour to invalidate all other Arguments, and forbid us to hearken to those Proofs, as being weak or fallacious, which our own Existence, and the sensible Parts of the Universe, offer so clearly and cogently to our Thoughts, that I deem it impossible for a considering Man to withstand them: For I judge it as certain and clear a Truth as can any where be delivered, That the invisible Things of God are clearly seen from the Creation of the World, being understood by the Things that are made, even his eternal Power and God-head. Though our Being furnishes us, as I have shewn, with an evident, and incontestable Proof of a Deity, and I believe no Body can avoid the Cogency of it, who will but as carefully attend to it, as to any other Demonstration of so many Parts; yet this being fo fundamental a Truth, and of that Confequence, that all Religion and genuine Morality depend thereon, I doubt not but I shall be forgiven by my Reader, if I go over fome Parts of this Argument again, and enlarge a little more upon them.

Something from Eternity.

§. 8. There is no Truth more evident, than that Something must be from Eternity. I never yet heard of any one so unreasonable, or that could suppose so manifest a Contradiction, as a

Time wherein there was perfectly Nothing. This being of all Abfurdities the greatest, to imagine that pure Nothing, the perfect Negation and Absence of all Beings, should ever produce any real Existence.

It being then unavoidable for all rational Creatures to conclude that fomething has existed from Eternity, let us next

fee what Kind of Thing that must be.

§. 9. There are but two Sorts of Beings in the World, that Man knows or conceives:

of Beings, Cogitative and Incogitative.

The World, that Man knows or conceives:

First, Such as are purely material, without material, without prings of our Beards, and Parings of our Nails.

Secondly, Senfible, thinking, perceiving Beings, fuch as we find our felves to be; which, if you please, we will hereafter call Cogitative and Incogitative Beings; which to our present Purpose, if for nothing else, are perhaps better Terms, than material and immaterial.

§. 10. If then there must be something eternal, let us see what Sort of Being it must be. And to that it is very obvious to Reason, that it must necessarily be a content Being. For it is as impossible to conceive that ever have incontentiate. Matter should produce a

Incogitative
Being cannot
produce a cogitative.

bare incogitative Matter should produce a thinking intelligent Being, as that nothing should of it self produce Matter. Let us suppose any Parcel of Matter eternal, great or small, we shall find it, in it felf, able to produce Nothing. For Example Let us suppose the Matter of the next Pebble we meet with, eternal, closely united, and the Parts firmly at Rest together, if there were no other Being in the World, must it not eternally remain so, a dead, inactive Lump? Is it possible to conceive it can add Motion to it felf. being purely Matter, or produce any Thing? Matter then, by its own Strength, cannot produce in it felf so much as Motion: The Motion it has must also be from Eternity, or else be produced and added to Matter, by some other Being more powerful than Matter; Matter, as is evident, having not Power to produce Motion in it felf. But let us suppose Motion eternal too; yet Matter, incogitative Matter and Motion, whatever Changes it might produce of Figure and Bulk, could never produce Thought. Knowledge will still be as far beyond the Power of Motion and Matter to produce, as Matter is beyond the Power of Nothing or Non-entity to produce. And I appeal to every one's own Thoughts, whether he cannot as easily conceive Matter produced by Nothing, as Thought to be produced by pure Matter, when before there was no fuch Thing as Thought, or an intelligent Being existing. Divide Matter into as minute Parts as you will, (which we are apt to imagine a fort of spiritualizing, or making a thinking Thing of it) vary the Figure and Motion of it as much as you

please, a Globe, Cube, Cone, Prism, Cylinder, &c. whose Diameters are but 1000000th Part of a Gry (a) will operate no otherwise upon other Bodies of proportionable Bulk, than those of an Inch or Foot Diameter; and you may as rationally expect to produce Sense, Thought, and Knowledge, by putting together, in a certain Figure and Motion, gross Par-

(a) A Gry is $\frac{1}{12}$ of a Line, a Line $\frac{1}{12}$ of an Inch, an Inch $\frac{1}{12}$ of a Philosophical Foot, a Philosophical Foot $\frac{1}{3}$ of a Pendulum, whose Diadroms, in the Latitude of 45 Degrees, are each equal to one Second of Time, or $\frac{1}{12}$ of a Minute. I have affected by made use of this Measure he and the Parts of it, under a decimal Division, with $\frac{1}{12}$ mes

them; because I think it would be of general Convenience, that this should be the common Measure in the Common-wealth of Letters.

ticles of *Matter*, as by those that are the very minutest, that do any where exist. They knock, impel, and resist one another, just as the greater do, and that is all they can do. So that if we will suppose nothing

first, or eternal; Matter can never begin to be: If we suppose bare Matter, without Motion; eternal Motion can never begin to be: If we suppose only Matter and Motion first, or eternal; Thought can never begin to be. For it is impossible to conceive, that Matter, either with or without Motion, could have originally in and from it felf, Sense, Perception, and Knowledge; as is evident from hence, that then Sense, Perception, and Knowledge, must be a Property eternally inseparable from Matter, and every Particle of it. Not to add, that though our general or specifick Conception of Matter makes us fpeak of it as of one thing, yet really all Matter is not one individual Thing, neither is there any fuch thing existing as one material Being, or one fingle Body that we know or can conceive. And therefore, if Matter were the eternal first cogitative Being, there would not be one eternal infinite cogitative Being, but an infinite Number of eternal finite cogitative Beings, independent one of another, of limited Force, and diffinct Thoughts, which could never produce that Order, Harmony and Beauty, which is to be found in Nature. Since therefore whatfoever is the first eternal Being, must neceffarily be cogitative; and whatfoever is first of all Things, must necessarily contain in it, and actually have, at least, all the Perfections that can ever after exist; nor can it ever give to another any perfection that it hath not, either actually in it felf, or at least in a higher Degree: It necessarily follows, that the first eternal Being cannot be Matter.

Therefore there has been an eternal Wijdom. §. 11. If therefore it be evident, that Something necessarily must exist from Eternity, 'tis also as evident that that something must necessarily be a cogitative Being: For it is as impossible, that incogitative Matter should pro-

duce a cogitative Being, as that nothing, or the Negation of all Being, should produce a positive Being or Matter.

§. 12. Though this Discovery of the necessary Existence of an eternal Mind, does sufficiently lead us into the Knowledge of GOD, since it will hence follow, that all other knowing Beings that have a Beginning, must depend on him, and have no other Ways of Knowledge,

Therefore there has been an eternal Wisdom.

or Extent of Power, than what he gives them; and therefore if he made those, he made also the less excellent Pieces of this Universe, all inanimate Beings, whereby his Omnificience, Power and Providence will be established, and all his other Attributes necessarily follow: Yet to clear up this a little farther, we will see what Doubts can be raised against it.

§. 13. First, Perhaps it will be said, that the it be as clear as Demonstration can make it, that there must be an eternal Being, and

Whether material or no.

that Being must also be knowing; yet it does not follow, but that thinking Being may also be material. Let it be so; it equally still follows, that there is a GOD: For if there be an Eternal, Omniscient, Omnipotent Being, it is certain, that there is a GOD, whether you imagine that Being to be material or no. But herein, I suppose, lies the Danger and Deceit of that Supposition: There being no way to avoid the Demonstration, that there is an eternal knowing Being, Men, devoted to Matter, would willingly have it granted, that this knowing Being is material; and then letting flide out of their Minds, or the Difcourse, the Demonstration whereby an eternal knowing Being was proved necessarily to exist, would argue all to be Matter, and so deny GOD, that is, an eternal, cogitative Being; whereby they are fo far from establishing, that they destroy their own Hypothesis. For if there can be, in their Opinion, eternal Matter, without any eternal cogitative Being, they manifestly separate Matter and Thinking, and suppose no necessary Connection of the one with the other, and so establish the Necessity of an eternal Spirit, but not of Matter, fince it has been proved already, that an eternal cogitative Being is unavoidably to be granted. Now, if thinking Matter may be separated, the eternal Existence of Matter will not follow from the external Existence of a cogitative Being, and they suppose it to no Purpose.

§. 14. But now let us fee how they can fa-Not material, * tisfy themselves or others, that this eternal first, because thinking Being is material. everyParticle First, I would ask them, whether they imaof Matter is gine that all Matter, every particle of Matter, not cogitative. tbinks? This, I suppose, they will scarce say, fince then there would be as many eternal thinking Beings, as there are Particles of Matter, and fo an Infinity of Gods. And yet, if they will not allow Matter as Matter, that is, every Particle of Matter to be as well cogitative as extended, they will have as hard a Task to make out to their own Reasons, a cogitative Being out of incogitative Particles, as an extended Being out of unextended Parts, if I may fo

fpeak.

§. 15. Secondly, If all Matter does not think, Secondly, One I next ask, whether it be only one Atom that Particle alone does fo? This has as many Abfurdities as the of Matter, other; for then this Atom of Matter must be cannot be alone eternal or not. If this alone be eternal, cogitative. then this alone, by its powerful Thought or Will, made all the rest of Matter. And so we have the Creation of Matter by a powerful Thought, which is that the Materialists stick at: For if they suppose one single thinking Atom to have produced all the rest of Matter, they cannot afcribe that Pre-eminency to it upon any other Account, than that of its thinking, the only supposed Difference. allow it to be by fome other Way, which is above our Conception, it must be still Creation, and these Men must give up their great Maxim, Ex nihilo nil fit. If it be faid, that all the rest of Matter is equally eternal, as that thinking Atom, it will be to fay any thing at pleafure, though never fo abfurd: For to suppose all Matter eternal, and yet one fmall Particle in Knowledge and Power infinitely above all the rest, is without any of the least Appearance of Reason to frame any Hypothelis. Every Particle of Matter, as Matter,

S. 16. Thirdly, If then neither one peculiar Atom alone can be this eternal thinking Being, nor all Matter, as Matter, i. e. every Particle of Matter, can be it, it only remains, that it is some certain System of Matter duly

is capable of all the same Figures and Motions of any other; and I challenge any one in his Thoughts, to add any Thing

else to one above another.

put together, that is this thinking eternal Being. This is that which I imagine, is that Notion which Men are aptest to have of GOD, who would have him a material Being, as most readily suggested to them, by the ordinary Conceit they have of themselves, and other Men, which they take to be material Thinking Beings. But this Imagination, however more natural, is no less absurd than the other: For to suppose the eternal thinking Being to be nothing else but a Composition of Particles of Matter, each whereof is incogitative, is to ascribe all the Wisdom and Knowledge of that eternal Being only to the Juxta Position of Parts; than which, nothing can be more absurd. For unthinking Particles of Matter, however put together, can have nothing thereby added to them, but a new Relation of Position, which 'tis impossible should give Thought and Knowledge to them.

§. 17. But farther, this corporeal System either has all its Parts at rest, or it is a certain Motion of the Parts wherein its Thinking confitts. If it be perfectly at Rest, it is but one Lump, and so can have no Privileges above one Atom.

Whether in Motion, or at Rest.

ticular

If it be the Motion of its Parts on which its Thinking depends, all the Thoughts there must be unavoidably accidental and limited, fince all the Particles that by Motion cause Thoughts being each of them in it felf without any Thought, cannot regulate its own Motions, much less be regulated by the Thought of the whole, fince that Thought is not the Cause of Motion, (for then it must be antecedent to it, and fo without it) but the Consequence of it, whereby Freedom, Power, Choice, and all rational and wife Thinking or Acting, will be quite taken away: So that fuch a Thinking Being will be no better nor wifer, than pure blind Matter, fince to refolve all into the accidental unguided Motions of blind Matter, or into Thought depending on unguided Motions of blind Matter, is the same Thing; not to mention the Narrowness of such Thoughts and Knowledge that must depend on the Motion of fuch Parts. But there needs no Enumeration of any more Abfurdities and Impossibilities in this Hypothesis, (however full of them it be) than that before-mentioned; fince let this Thinking System be all, or a part of the Matter of the Universe, it is impossible that any one Particle should either know its own, or the Motion of any other Particle, or the whole know the Motion of every Par-

R 4

ticular; and fo regulate its own Thoughts or Itotions, or indeed have any Thought resulting from such Monon.

Matter not co-eternal with an eternal Mind.

§. 18. Others would have Matter to be eternal, notwithstanding that they allow an eternal, cogitative, immaterial Being. This, tho't take not away the Being of a GOD, yet fince it denies one and the First great Piece of his Workmanship, the Creation, let us con-

fider it a little. Matter must be allowed eternal: Why? Because you cannot conceive how it can be made out of Nothing; why do you not also think your self eternal? You will antwer perhaps, because about Twenty or Forty Years fince, you began to be. But if I ask you what that You is, which began then to be, you can scarce tell me. The Matter whereof you are made, began not then to be; for if it did, then it is not eternal; but it began to be put together in fuch a Fashion and Frame as makes up your Body; but yet that Frame of Particles is not you, it makes not that thinking Thing you are; (for I have now to do with one, who anows an eternal, immaterial, thinking Being, but would have unthinking Matter eternal too:) therefore when did that thinking Thing begin to be? If it did never begin to be, then have you always been a thinking Thing from Eternity; the Abfurdity whereof I need not confute, till I meet with one who is fo void of Understanding, as to own it. If therefore you can allow a thinking Thing to be made out of Nothing, (as all Things that are not eternal must be) why also can you not allow it possible for a material Being to be made out of Nothing, by an equal Power, but that you have the Experience of the one in View, and not of the other? Though, when well confidered, Creation of a Spirit will be found to require no less Power, than the Creation of Matter. Nay, possibly, if we would emancipate our selves from vulgar Notions, and raise our Thoughts as far as they would reach, to a closer Contemplation of Things, we might be able to aim at fome dim and feeming Conception how Matter might at first be made, and begin to exist by the Power of that eternal first Being; but to give Beginning and Being to a Spirit, would be found a more inconceivable Effect of Omnipotent Power. But this being what would perhaps lead us too far from the Notions on which the Philosophy now in the World is built, it would not be pardonable to deviate fo far from them, or to enquire fo far as Grammar

it felf would authorize, if the common fettled Opinion opposes it; especially in this Place, where the received Doctrine serves well enough to our present Purpose, and leaves this past doubt, that the Creation or Beginning of any one SUBSTANCE out of Nothing, being once admitted, the Creation of all other, but the CREATOR himself, may, with the same Ease, be supposed.

§. 19. But you will fay, Is it not impossible to admit of the making any Thing out of Nothing, fince we cannot possibly conceive it? I answer, No; 1. Because it is not reasonable to deny the Power of an infinite Being, because we cannot comprehend its Operations.

Matter not co-eternal with an eternal Mind.

We do not deny our Effects upon this Ground, because we cannot possibly conceive the Manner of their Production. We cannot perceive how any Thing but Impulse of Body can move Body; and yet that is not a Reason sufficient to make us deny it possible, against the constant Experience we have of it in our felves, in all our voluntary Motions, which are produced in us only by the free Action or Thought of our own Minds; and are not, nor can be the Effects of the Impulse or Determination of the Motion of blind Matter, in or upon our Bodies; for then it could not be in our Power or Choice to alter it. For Example: My Right Hand writes, whilst my left Hand is still; what causes Rest in one. and Motion in the other? Nothing but my Will, a Thought of my Mind; my Thought only changing, the right Hand refts, and the left Hand moves. This is Matter of Fact, which cannot be denied: Explain this, and make it intelligible, and then the next Step will be to understand Creation: For the giving a new Determination to the Motion of the animal Spirits, (which fome make use of to explain voluntary Motion) clears not the Difficulty one jot; to alter the Determination of Motion, being in this Case no easier nor less, than to give Motion it self; fince the new Determination given to the Animal Spirits, must be either immediately by Thought, or by some other Body put in their way by Thought, which was not in their way before, and fo must owe its Motion to Thought; either of which leaves voluntary Motion as unintelligible as it was before. In the mean time, 'tis an over-valuing our felves, to reduce all to the narrow Measure of our Capacities; and to conclude all Things impossible to be done, whose Manner of doing exceeds our

Comprehension. This is to make our Comprehension infinite, or GOD sinite, when what he can do, is limited to what we can conceive of it. If you do not understand the Operations of your own finite Mind, that Thinking Thing within you, do not deem it strange, that you cannot comprehend the Operations of that eternal infinite Mind, who made and governs all Things, and whom the Heaven of Heavens cannot contain.

CHAP. XI.

Of our Knowledge of the Existence of other Things.

It is to be bad only by Senfation.

S. 1. THE Knowledge of our own Being we have by Intuition. The Existence of a GOD, Reason clearly makes known to us, as has been shewn.

The Knowledge of the Existence of any other Thing, we can have only by Sensation: For there being no necessary Connection of real Existence, with any Idea a Man hath in his Memory, nor of any other Existence, but that of GOD, with the Existence of any particular Man; no particular Man can know the Existence of any other Being, but only when by actual operating upon him, it makes it self perceived by him. For the having the Idea of any thing in our Mind, no more proves the Existence of that Thing, than the Picture of a Man evidences his being in the World, or the Visions of a Dream make thereby a true History.

S. 2. 'Tis therefore the actual receiving of Instance, Whiteness of this Paper.

S. 2. 'Tis therefore the actual receiving of Ideas from without, that gives us Notice of the Existence of other Things, and make us know, that fomething doth exist at that time without us, which causes that Idea in us, though

perhaps we neither know nor confider how it does it: For it takes not from the Certainty of our Senses, and the *Ideas* we receive by them, that we know not the Manner wherein they are produced; v. g. whilst I write this, I have, by the Paper affecting my Eyes, that *Idea* produced in my Mind, which, whatever Object causes, I call White; by which I

know that that Quality or Accident, (i. e. whose Appearance before my Eyes always causes that Idea) doth really exist, and hath a Being without me. And of this, the greatest Assurance I can possibly have, and to which my Faculties can attain, is the Testimony of my Eyes, which are the proper and sole Judges of this Thing, whose Testimony I have reason to rely on, as so certain, that I can no more doubt, whilst I write this, that I see White and Black, and that something really exists, that causes that Sensation in me, than that I write or move my Hand; which is a Certainty as great as human Nature is capable of, concerning the Existence of any Thing, but a Man's self alone, and of GOD.

§. 3. The Notice we have by our Senses, of the existing of Things without us, though it be not altogether so certain as our intuitive Knowledge, or the Deductions of our Reason, employed about the clear abstract Ideas of our own Minds; yet it is an Assurance that deserves the Name of Knowledge. If we persuade our selves, that our Faculties act and inform us right concerning the Existence of those Objects that affect them, it cannot pass for an ill-grounded Considence: For I think no Body

This, tho not for certain as Demonstration, yet may be called Knowledge, and proves the Existence of Things without us.

can, in earnest, be so sceptical, as to be uncertain of the Existence of those Things which he sees and feels. At least, he that can doubt fo far, (whatever he may have with his own Thoughts) will never have any Controversy with me; fince he can never be fure I fay any thing contrary to his Opinion. As to my felf, I think GOD has given me Affurance enough of the Existence of Things without me; fince by their different Application, I can produce in my felf both Pleasure and Pain, which is one great concernment of my present State. This is certain, the Confidence that our Faculties do not herein deceive us, in the greatest Assurance we are capable of, concerning the Existence of material Beings. For we cannot act any Thing, but by our Faculties; nor talk of Knowledge it felf, but by the Help of those Faculties which are fitted to apprehend even what Knowledge is. But befides the Affurance we have from our Senses themselves, that they do not err in the Information they give us of the Existence of Things without us, when they are affected by them, we are farther confirmed in this Assurance by other concurrent Reasons.

First, because we cannot have them but by the Inlet of the Senses. §. 4. First, 'Tis plain, those Perceptions are produced in us by exterior Causes affecting our Senses; because those that want the Organs of any Sense, never can have the Ideas belonging to that Sense produced in their Minds. This is too evident to be doubted; and therefore we cannot but be assured.

in by the Organs of that Sense, and no other Way. The Organs themselves, 'tis plain, do not produce them; for then the Eyes of a Man in the Dark would produce Colours, and his Nose smell Roses in the Winter: But we see no Body gets the Relish of a Pine-Apple, till he goes to the *Indies* where it is, and tastes it.

2 Because an Idea from actual Sensation, and another from Menory, are very distinct Perceptions.

§. 5. Secondly, Because fometimes I find, that I cannot avoid the having those Ideas produced in my Mind: For though when my Eyes are shut, or Windows fast, I can at Pleasure re-call to my Mind the Ideas of Light, or the Sun, which former Sensations had lodged in my Memory; so I can at Pleasure lay by that Idea, and take into my View that of the Smell of a Rose, or Taste of Sugar. But if I

turn my Eyes at Noon towards the Sun, I cannot avoid the Ideas which the Light or Sun then produces in me. So that there is a manifest Difference betwen the Ideas laid up in my Memory, (over which, if they were there only, I should have constantly the same Power to dispose of them, and lay them by at Pleasure) and those which force themselves upon me, and I cannot avoid having. And therefore it must needs be some exterior Cause, and the brisk acting of some Objects without me, whose Efficacy I cannot resist, that produces those Ideas in my Mind, whether I will or no. Besides, there is no Body who doth not perceive the Difference in himfelf, between contemplating the Sun, as he hath the Idea. of it in his Memory, and actually looking upon it: Of which two, his Perception is fo diffinct, that few of his Ideas are more diffinguishable one from another: And therefore he hath certain Knowledge, that they are not both Memory, or the Actions of his Mind, and Fancies only within him; but that actual Seeing hath a Caufe without,

§. 6. Thirdly, Add to this, that many of those Ideas are produced in us with Pain, which afterwards we remember without the least Offence. Thus the Pain of Heat or Cold, when the Idea of it is revived in our Minds, gives us no Disturbance; which, when felt, was very troublefome, and is again, when actually repeated; which is occasioned by the Diforder the external Object causes in our Bodies, when applied to it. And we remember the Pain of Hunger, Thirst, or the Head-ach, without any Pain at all; which would either never diffurb us, or else constantly do it, as often as

3dly, Pleafure or Pain which accompanies actual Seasation accompanies not the returning of those Ideas without the external Objests.

we thought of it, were there nothing more but Ideas floating in our Minds, and Appearances entertaining our Fancies, without the real Existence of Things affecting us from Abroad. The same may be said of Pleasure, accompanying several actual Senfations: And though mathematical Demonstration depends not upon Sense, yet the examining them by Diagrams, gives great Credit to the Evidence of our Sight, and feems to give it a Certainty approaching to that of Demonstration it felf. For it would be very strange, that a Man should allow it for an undeniable Truth, that two Angles of a Figure which he measures by Lines and Angles of a Diagram, should be bigger one than the other; and yet doubt of the Existence of those Lines and Angles, which by looking on, he makes use of to measure that by.

§. 7. Fourthly, Our Senses, in many Cases, bear witness to the Truth of each other's Report, concerning the Existence of sensible Things without us. He that fees a Fire, may, if he doubt whether it be any thing more than a bare Fancy, feel it too; and be convinced, by putting his Hand in it. Which certainly could never be put into fuch exquisite Pain, by a bare Idea or Phantom, unless that the Pain be a Fancy too:

Fourthly, Our Senses assist one anothers Testimony of the Existence of outward Things.

Which yet he cannot, when the Burn is well, by raifing the

Idea of it, bring upon himself again.

Thus I see, whilst I write this, I can change the Appearance of the Paper; and by defigning the Letters, tell beforehand what new Idea it shall exhibit the very next Moment, barely by drawing my Pen over it; which will neither appear (let me fancy as much as I will) if my Hand fland flill: or though I move my Pen, if my Eyes be shut: Nor when those Characters are once made on the Paper, can I chuse asterwards but fee them as they are; that is, have the Ideas of fuch Letters as I have made. Whence it is manifest, that they are not barely the Sport and Play of my own Imagination, when I find that the Characters, that were made at the Pleasure of my own Thoughts, do not obey them; nor yet cease to be, whenever I shall fancy it, but continue to affect my Senses constantly and regularly, according to the Figures I made them. To which, if we will add, that the Sight of those shall, from another Man, draw such Sounds as I before-hand defign they shall stand for, there will be little Reason left to doubt that those Words I write do really exift without me, when they cause a long Series of regular Sounds to affect my Ears, which could not be the Effect of my Imagination, nor could my Memory retain them in that Order.

This Certainty is as great as our Condition needs. §. 8. But yet, if after all this, any one will be fo fceptical, as to diffruft his Senfes, and to affirm, that all we fee and hear, feel and tafte, think and do, during our whole Being, is but the Series and deluding Appearances of a long Dream, whereof there is no Reality, and therefore will question the Existence of all Things,

or our Knowledge of any thing; I must defire him to consider, that if all be a Dream, then he doth but dream that he makes the Question; and so it is not much matter, that a waking Man should answer him. But yet, if he pleafes, he may dream that I make him this Answer, That the Certainty of Things existing in rerum Natura, when We have the Testimony of our Senses for it, is not only as great as our Frame can attain to, but as our Condition needs. For our Faculties being fuited not to the full Extent of Being, nor to a perfect, clear, comprehensive Knowledge of Things free from all Doubt and Scruple, but to the Prefervation of us, in whom they are, and accommodated to the Use of Life; they serve to our purpose well enough, if they will but give us certain Notice of those Things, which are convenient or inconvenient to us. that fees a Candle burning, and hath experimented the Force of its Flame, by putting his Finger in it, will little doubt that this is fomething existing without him, which does him Harm, and put him to great Pain; Which is Affurance

Affurance enough when no Man requires greater Certainty, to govern his Actions by, than what is as certain as his Actions themselves. And if our Dreamer pleases to try whether the glowing Heat of a Glass Furnace, be barely a wandring Imagination in a drowsy Man's Fancy, by putting his Hand into it, he may, perhaps, be wakened into a Certainty greater than he could wish, that it is something more than bare Imagination. So that this Evidence is as great as we can desire, being as certain to us as our Pleasure or Pain, i. e. Happiness or Misery; beyond which we have no Concernment, either of Knowing or Being. Such an Assurance of the Existence of Things without us, is sufficient to direct us in the attaining the Good and avoiding the Evil, which is caused by them, which is the important Concernment we have of being made acquainted with 'em.

§. 9. In fine then, when our Senses do actually convey into our Understandings any *Idea*, we cannot but be satisfied that there doth something at that time really exist without us, which doth affect our Senses, and by them give Notice of it self to our apprehensive Fa-

But reaches no farther than actual Sensation.

culties, and actually produce that Idea which we then perceive: And we cannot fo far distrust their Testimony, as to doubt that fuch Collections of Simple Ideas, as we have observed by our Senses to be united together, do really exist together. But this Knowledge extends as far as the present Testimony of our Senses, employ'd about particular Objects, that do then affect them, and no farther. For if I faw fuch a Collection of Simple Ideas, as is wont to be called Man, existing together one Minute since, and am now alone; I cannot be certain that the same Man exists now, fince there is no necessary Connection of his Existence a Minute fince, with his Existence now. By a Thousand Ways he may cease to be, fince I had the Testimony of my Senses for his Existence. And if I cannot be certain that the Man I faw last to Day, is now in Being, I can less be certain that he is fo, who hath been longer removed from my Senfes, and I have not feen fince Yesterday, or fince the last Year; and much less can I be certain of the Existence of Men that I never faw. And therefore, though it be highly probable that Millions of Men do now exist, yet whilst I am alone writing this, I have not that Certainty of it, which we strictly call Knowledge; though the great Likelihood of it puts me past

Doubt, and it be reasonable for me to do several Things upon the Confidence that there are Men (and Men also of my Acquaintance, with whom I have to do) now in the World: But this is but Probability, not Knowledge.

Folly to expest Demonstration in every Thing. §. 10. Whereby yet we may observe how foolish and vain a Thing it is for a Man of a narrow Knowledge, who having Reason given him to judge of the different Evidence and Probability of Things, and to be swayed accordingly; how vain, I say, it is to expect De-

monstration and Certainty in Things not capable of it, and refuse Affent to very rational Propositions, and act contrary to very plain and clear Truths, because they cannot be made out so evident, as to surmount every the least (I will not say Reafon, but) Pretence of Doubting. He that in the ordinary Affairs of Life would admit of nothing but direct plain Demonstration, would be sure of nothing in this World, but of perishing quickly. The Wholesomness of his Meat or Drink would not give him Reason to venture on it: And I would sain know what 'tis he could do upon such Grounds, as were capable of no Doubt, no Objection.

Past Existence is known by Memory. §. 11. As when our Senses are actually employed about any Object, we do know that it does exist; so by our Memory we may be affured, that heretofore Things that affected our Senses have existed. And thus we have Know-

ledge of the past Existence of several Things, whereof our Senses having informed us, our Memories still retain the Ideas: and of this we are past all Doubt, so long as we remember well. But this Knowledge also reaches no farther than our Senses have formerly affured us. Thus feeing Water at this instant, 'tis an unquestionable Truth to me, that Water doth exist: And remembring that I saw it yesterday, it will also be always true; and as long as my Memory retains it, always an undoubted Proposition to me, that Water did exist the 10th of July, 1688, as it will also be equally true, that a certain Number of very fine Colours did exist, which, at the fame time, I faw upon the Bubble of that Water: But being now quite out of the Sight both of the Water and Bubbles too, it is no more certainly known to me, that the Water doth now exist, than that the Bubbles or Colours therein do fo; it being no more necessary that Water should exist to Day, because it existed Yesterday, than that the Colours lours or Bubbles exist to Day, because they existed Yesterday; though it be exceedingly much more probable, because Water hath been observed to continue long in Existence, but Bubbles, and the Colours on them, quickly cease to be.

§. 12. What Ideas we have of Spirits, and how we come by them, I have already shewn. But though we have those *Ideas* in our Minds, knowable. and know we have them there, the having the Ideas of Spirits does not make us know that

The Existence of Spirits not

any fuch Things do exist without us, or that there are any finite Spirits, or any other spiritual Beings, but the eternal GOD. We have Ground from Revelation, and feveral other Reasons, to believe with Assurance, that there are such Creatures; but our Senses not being able to discover them, we want the Means of knowing their particular Existences. For we can no more know that there are finite Spirits really existing by the Idea we have of such Beings in our Minds, than by the Ideas any one has of Fairies, or Centaurs, he can come to know, that Things answering those Ideas, do really exist.

And therefore concerning the Existence of finite Spirits. as well as feveral other Things, we must content our selves with the Evidence of Faith; but universal certain Propositions concerning this Matter, are beyond our reach. For however true it may be, v. g. that all the Intelligent Spirits that GOD ever created, do still exist; yet it can never make a part of our certain Knowledge. These, and the like Propositions, we may affent to, as highly probable, but are not, I fear, in this State, capable of knowing. We are not then to put others upon Demonstrating, nor our selves upon Search of universal Certainty in all those Matters wherein we are not capable of any other Knowledge, but what our Senies give us in this or that particular.

§. 13. By which it appears, that there are two Sorts of Propositions. 1. There is one Sort of Propositions concerning the Existence of any Thing answerable to such an Idea; as having the Idea of an Elephant, Phænix, Motion, or an Angle, in my Mind, the first and natural Enquiry is, Whether fuch a Thing does any where

Particular. Propositions concerning Existences, are knowable.

exist? And this Knowledge is only of Particulars. No Existence of any Thing without us, but only of GOD, can certainly be known farther than our Senses inform us. 2. There is another Sort of Propositions, wherein is expressed the Agree-

Vol. II.

ment or Disagreement of our abstract Ideas, and their Dependance one on another. Such Propositions may be univerafal and certain. So having the Idea of GOD, and my self, of Fear and Obedience, I cannot but be sure that GOD is to be seared and obeyed by me: And this Proposition will be certain concerning Man in general, if I have made an abstract Idea of such a Species, whereof I am one Particular. But yet this Proposition, how certain soever, That Men ought to sear and obey GOD, proves not to me the Existence of Men in the World, but will be true of all such Creatures, whenever they do exist: Which Certainty of such general Propositions, depends on the Agreement or Disagreement is to be discovered in those abstract Ideas.

And general Propositions concerning abstract Ideas. §. 14. In the former Case, our Knowledge is the Consequence of the Existence of Things producing *Ideas* in our Minds by our Senses: In the latter, Knowledge is the Consequence of the *Ideas*, (be they what they will) that are in our Minds producing there general certain Propositions. Many of these are called

aterna Veritates, and all of them indeed are so; not from being written all or any of them in the Minds of all Men, or that they were any of them Propositions in any one's Mind, till he having got the abstract Ideas, joined or separated them by Affirmation or Negation. But wherefoever we can suppose such a Creature as Man is, endowed with such Faculties, and thereby furnished with such Ideas as we have, we must conclude he must needs, when he applies his Thoughts to the Confideration of his Ideas, know the Truth of certain Propositions, that will arise from the Agreement or Disagreement which he will perceive in his own *Ideas*. Such Propofitions are therefore called eternal Truths, not because they are eternal Propositions actually formed, and antecedent to the Understanding, that at any time makes them; nor because they are imprinted on the Mind from any Patterns that are any where of them out of the Mind, and existed before: But because being once made about abstract Ideas, so as to be true, they will, whenever they can be supposed to be made again at any time past or to come, by a Mind having those Ideas, always actually be true. For Names being supposed to stand perpetually for the same Ideas; and the same Ideas having immutably the fame Habitudes one to another; Propositions concerning any abstract Ideas, that are once true, must needs be eternal Verities.

CHAP. XII.

Of the Improvement of our Knowledge.

§. 1. I T having been the common received Opinion amongst Men of Letters, that Knowledge Maxims were the Foundation of all Knowis not from ledge; and that the Sciences were each of Maxims. them built upon certain Pracognita, from whence the Understanding was to take its Rise, and by which it was to conduct it felf, in its Enquiries into the Matters belonging to that Science; the beaten Road of the Schools has been to lay down in the Beginning, one or more general Propositions, as Foundations whereon to build the Knowledge that was to be had of that Subject. These Doctrines thus laid down for Foundations of any Science, were called Principles, as the Beginnings from which we must set out, and look no farther backwards in our Enquiries, as we have already observed.

§. 2. One thing, which might probably give an Occasion to this Way of Proceeding (The Occasion other Sciences, was (as I suppose) the good from of that Opinion.) wherein Men being observed to attain a great Certainty of Knowledge, these Sciences came by Preeminence to be called Madimata, and Madimas, Learning, or Things learned, throughly learned, as having, of all others,

the greatest Certainty, Clearness and Evidence, in

them.

§. 3. But if any one will confider, he will (I guess) find that the great Advancement and Certainty of real Knowledge, which Men arrived to in these Sciences, was not owing to the Influence of these Principles, nor derived find Ideas. from any peculiar Advantage they received from two or three general Maxims laid down in the Beginning; but from the clear, diffind, compleat Ideas their Thoughts were employed about, and the Relation of Equality and Excess so clear between some of them, that they had

an intuitive Knowledge, and by that, a Way to discover it in others, and this without the Help of those Maxims. For I ask, Is it not possible for a young Lad to know that his whole Body is bigger than his little Finger, but by Virtue of this Axiom, That the Whole is bigger than a Part; nor be affured of it, 'till he has learned that Maxim? Or cannot a Country Wench know, that having received a Shilling from one that owes her three, and a Shilling also from another that owes her three, that the remaining Debts in each of their Hands, are equal? Cannot she know this, I fay, without she fetch the Certainty of it from this Maxim, That if you take Equals from Equals, the Remainder will be Equals; a Maxim which possibly she never heard or thought of? I defire any one to confider, from what has been elsewhere faid, which is known first and clearest by most People, the particular Inflance, or the general Rule; and which it is that gives Life and Birth to the other. general Rules are but the comparing our more general and abstract Ideas, which are the Workmanship of the Mind, made, and Names given to them, for the easier Dispatch in its Reasonings, and drawing into comprehensive Terms, and short Rules, its various and multiplied Observations. But Knowledge began in the Mind, and was founded on Particulars; though afterwards, perhaps, no Notice be taken thereof; it being natural for the Mind (forward still to enlarge its Knowledge) most attentively to lay up those general Notions, and make the proper Use of them, which is to difburthen the Memory of the cumbersome Load of Particulars. For I defire it may be confidered what more Certainty there is to a Child, or any one, that his Body, little Finger and all, is bigger than his little Finger alone, after you have given to his Body the Name Whole and to his little Finger the Name Part, than he could have had before; or what new Knowledge concerning his Body, can these two relative Terms give him, which he could not have without them? Could he not know that his Body was bigger than his little Finger, if his Language were yet so impersect, that he had no such relative Terms as *Whole* and *Part?* I ask farther, When he has got these Names, how is he more certain that his Body is a Whole, and his little Finger a Part, than he was, or might be certain, before he learned those Terms, that his Body was bigger than his little Finger? Any one may as reasonably doubt or deny, that his little Finger is a Part of his Body, as that it is less than his Body. And he that can doubt whether

whether it be less, will as certainly doubt whether it be a Part. So that the Maxim, The Whole is bigger than a Part, can never be made use of to prove the little Finger less than the Body, but when it is useless, by being brought to convince one of a Truth which he knows already. For he that does not certainly know that any Parcel of Matter, with another Parcel of Matter joined to it, is bigger than either of them alone, will never be able to know it by the Help of these two relative Terms, Whole and Part, make of them what Maxim you please.

§. 4. But be it in the *Mathematicks* as it will, whether it be clearer, that taking an Inch from a black Line of two Inches, and an Inch from a red Line of two Inches, the remaining Parts of the two Lines will be equal; or that

Dangerous to build upon precarious Principles.

if you take Equals from Equals, the Remain-

der will be Equals: Which, I say, of these two is the clearer and first known, I leave to any one to determine, it not being material to my present Occasion. That which I have here to do, is to enquire, whether if it be the readiest way to Knowledge, to begin with general Maxims, and build upon them, it be yet a sase way to take the Principles, which are laid down in any other Science, as unquestionable Truths; and so receive them without Examination, and adhere to them without suffering to be doubted of, because Mathematicians have been so happy, or so sair, to use none but self-evident and undeniable. If this be so, I know not what may not pass for Truth in Morality, what may not be introduced and proved in natural Philosophy.

Let that Principle of some of the Philosophers, that all is Matter, and that there is nothing else, be received for certain and indubitable, and it will be easy to be seen by the Writings of some that have revived it again in our Days, what Consequences it will lead us into. Let any one, with Poicemo, take the World; or, with the Stoicks, the Ether, or the Sun; or, with Anaximenes, the Air to be God; and what a Divinity, Religion, and Worship, must we needs have! Nothing can be so dangerous as Principles thus take up without Questioning or Examination; especially if they be such as concern Morality, which influence Mens Lives, and give a Biass to all their Actions. Who might not justify expect another Kind of Life in Aristippus, who placed Happiness in bodily Pleasure; and in Antisthenes, who received

Virtue sufficient to Felicity? And he who, with Plate, shall place Beatstude in the Knowledge of God, will have his Thoughts raised to other Contemplations than those who look not beyond this Spot of Earth, and those perishing Things which are to be had in it. He that, with Archelaus, shall lay it down as a Principle, That Right and Wrong, Honest and Dishonest, are defined only by Laws, and not by Nature, will have other Measures of moral Rectitude and Pravity, than those who take it for granted, that we are under Obligations antecedent to all human Constitutions.

This is no certain Way to Truth.

§. 5. If therefore those that pass for *Principles*, are not certain, (which we must have some way to know, that we may be able to distinguish them from those that are doubtful) but are only made so to us by our blind Assent,

we are liable to be missed by them; and instead of being guided into Truth, we shall, by Principles, be only confirm-

ed in Mistake and Error.

But to compare clear compleat Ideas under steady Names. §. 6. But fince the Knowledge of the Certainty of Principles, as well as of all other Truths, depends only upon the Perception we have of the Agreement or Difagreement of our *Ideas*, the Way to improve our Knowledge, is not, I am fure, blindly, and with an implicit Faith, to receive and fwallow Prin-

ciples; but is, I think, to get and fix in our Minds elear, diffinet and compleat Ideas, as far as they are to be had, and annex to them proper and conflant Names. And thus, perhaps, without any other Principles, but barely confidering those Ideas, and by comparing them one with another, finding their Agreement and Disagreement, and their several Relations and Habitudes, we shall get more true and clear Knowledge by the Conduct of this one Rule, than by taking up Principles, and thereby putting our Minds into the Disposal of others.

The true Method of advaneing Knowledge, is by confidering our abstract Ideas. §. 7. We must therefore, if we will proceed as Reason advises, adapt our Methods of Enquiry to the Nature of the Ideas we examine, and the Truth we search after. General and certain Truths are only sounded in the Habitudes and Relations of abstract Ideas. A sagacious and methodical Application of our

Thoughts, for the finding out these Relations, is the only

way to discover all that can be put with Truth and Certainty concerning 'em, into general Propositions. By what Steps we are to proceed in these, is to be learned in the Schools of the Mathematicians, who from very plain and eafy Beginnings, by gentle Degrees, and a continued Chain of Reasonings, proceed to the Discovery and Demonstration of Truths that appear at first fight beyond human Capacity. The Art of finding Proofs, and the admirable Methods they have invented for the fingling out, and laying in order those intermediate Ideas that demonstratively shew the Equality or Inequality of unapplicable Quantities, is that which has carried them fo far, and produced fuch wonderful and unexpected Discoveries: But whether something like this, in respect of other Ideas, as well as those of Magnitude, may not in Time be found out, I will not determine. This, I think, I may fay, that if other Ideas, that are the real, as well as nominal Effences of their Species, were purfued in the way familiar to Mathematicians, they would carry our Thoughts farther, and with greater Evidence and Clearness than possibly we are apt to imagine.

§. 8. This gave me the Confidence to advance that Conjecture which I fuggest, Chap. 3. viz. That Morality is capable of Demonstration, as well as Mathematicks. For the Ideas that Ethicks are conversant about, being all real Essences, and such as I imagine have

By which Morality also may be made clearer.

a discoverable Connection and Agreement one with another; fo far as we can find their Habitudes and Relations, fo far we shall be possessed of certain, real, and general Truths; and I doubt not, but if a right Method were taken, a great part of Morality might be made out with that Clearness, that could leave, to a considering Man, no more Reason to doubt, than he could have to doubt of the Truth of Propositions in Mathematicks, which have been demonstrated to him.

§. 9. In our Search after the Knowledge of Substances, our want of Ideas, that are suitable to such a way of proceeding, obliges us to a quite different Method. We advance not here, as in the other (where our abstract Ideas are real, as well as nominal Essences) by contemplating our Ideas, and considering their

But Knowledge of Bodies is to be improved only by Expericuce.

Relations and Correspondencies; that helps us very little, for the Reasons that in another place we have at large set down. By which, I think, it is evident, that Substances

afford Matter of very little general Knowledge; and the bare Contemplation of their abitract Ideas, will carry us but a very little way in the Search of Truth and Certainty. What then are we to do for the Improvement of our Knowledge in fubstantial Beings? Here we are to take a quite contrary Course; the want of Ideas of their real Essences, sends us from our own Thoughts, to the Things themselves, as they exist. Experience here must teach me what Reason cannot: And 'tis by trying alone, that I can certainly know, what other Qualities co-exist with those of my complex Idea, v. g. whether that yellow, heavy, fufible Body I call Gold, be malleable or no: which Experience (which way ever it prove in that particular Body I examine) makes me not certain that it is fo in all or any other yellow, heavy, fufible Bodies, but that which I have tryed. Because it is no Consequence one way or t'other from my complex Idea; the Necessity or Inconfistence of Malleability hath no visible Connection with the Combination of that Colour, Weight, and Fufibility in any Body. What I have faid here of the nominal Effence of Gold, supposed to confist of a Body of such a determinate Colour, Weight, and Fusibility, will hold true, if Malleableness, Fixedness, and Solubility in Aqua Regia, be added to it. Our Reasonings from these Ideas will carry us but a little way in the certain Discovery of the other Properties in those Masses of Matter wherein all these are to be found. Because the other Properties of fuch Bodies depending not on these, but on that unknown real Effence, on which these also depend, we cannot by them discover the rest; we can go no farther than the fimple Ideas of our nominal Essence will carry us, which is very little beyond themselves; and so afford us but very sparingly any certain, universal, and useful Truths. For upon Tryal, having found that particular Piece (and all others of that Colour, Weight; and Fusibility, that I ever tryed) Malleable, that also makes now perhaps a part of my complex Idea, part of my nominal Effence of Gold: Whereby, though I make my complex Idea, to which I affix the Name Gold, to confift of more simple Ideas than before; yet Hill, it not containing the real Effence of any Species of Bodies, it helps me not certainly to know (I fay to know, perhaps, it may not conjecture) the other remaining Properties of that Body, farther than they have a visible Connection with fome or all of the simple Ideas that make up my nominal Esfence. For Example: I cannot be certain from this complex Idea, whether Gold be fixed or no; because, as before, there

is

is no necessary Connection or Inconsistence to be discovered betwixt a complex *Idea* of a Body, yellow, heavy, fusible, malleable, betwixt these, I say, and *Fixedness*: so that I may certainly know, that in whatsoever Body these are found, there *Fixedness* is sure to be. Here again, for Assurance, I must apply my self to *Experience*; as far as that reaches, I may have certain Knowledge, but no farther.

§. 10. I deny not, but a Man accustomed to rational and regular Experiments shall be able to see farther into the Nature of Bodies, and guess righter at their yet unknown Properties, than one that is a Stranger to them:

This may procure us Convenience, not Science.

But yet, as I have faid, this is but Judgment and Opinion, not Knowledge and Certainty. This way of getting and improving our Knowledge in Substances only by Experience and History, which is all that the Weakness of our Faculties in this State of Mediocrity, which we are in in this World, can attain to, makes me suspect that natural Philosophy is not capable of being made a Science. We are able, I imagine, to reach very little general Knowledge concerning the Species of Bodies, and their feveral Properties. Experiments and Historical Observations we may have, from which we may draw Advantages of Ease and Health, and thereby increase our Stock of Conveniences for this Life; but beyond this, I fear our Talents reach not, nor are our Faculties, as I guess, able to advance.

§. 11. From whence it is obvious to conclude, that fince our Faculties are not fitted to penetrate into the internal Fabrick and real Effences of Bodies, but yet plainly discover to us the Being of a GOD, and the Knowledge of our selves, enough to lead us into a full and clear Discovery of our Duty, and great Concern-

We are fitted for moral Knowledge and natural Improvements.

ment, it will become us, as rational Creatures, to employ those Faculties we have, about what they are most adapted to, and follow the Direction of Nature, where it seems to point us out the way. For 'tis rational to conclude, that our proper Employment lies in those Enquiries, and in that fort of Knowledge which is most suited to our natural Capacities, and carries in it our greatest Interest, i. e. the Condition of our eternal Estate. Hence I think I may conclude, that Merality is the proper Science and Business of Mankind in general, (who are both concerned and fitted to search out their Summum

Bonum)

Bonum) as feveral Arts, converfant about feveral Parts of Nature, are the Lot and private Talent of particular Men, for the common Use of Human Life, and their own particular Subfiftence in this World. Of what Confequence the Difcovery of one natural Body and its Properties may be to human Life, the whole great Continent of America is a convincing Inftance; whose Ignorance in useful Arts, and want of the greatest part of the Conveniences of Life, in a Country that abounded with all Sorts of natural Plenty, I think, may be attributed to their Ignorance, of what was to be found in a very ordinary despicable Stone, I mean the Mineral of Iron. And whatever we think of our Parts and Improvements in this part of the World, where Knowledge and Plenty feem to vie each with other; yet to any one that will ferioufly reflect on it, I suppose it will appear past doubt, that were the Use of Iron lost among us, we should in a few Ages be unavoidably reduced to the Wants and Ignorance of the ancient favage Americans, whose natural Endowments and Provisions come no way short of those of the most flourishing and polite Nations; fo that he who first made known the Use of that one contemptible Mineral, may be truly stiled the Father of Arts, and Author of Plenty.

But must beevare of Hypotheses, and evrong Principles. §. 12. I would not thererefore be thought to difefteem, or diffuade the Study of Nature. I readily agree the Contemplation of his Works gives us Occasion, to admire, revere, and glorify their Author: And if rightly directed, may be of greater Benefit to Mankind, than the Monuments of exemplary Charity, that have, at fo

great Charge, been raised by the Founders of Hospitals and Alms-houses. He that first invented Printing, discovered the Use of the Compass, or made publick the Virtue and right Use of Kin Kina, did more for the Propagation of Knowledge, for the Supplying and Increase of useful Commodities, and saved more from the Grave, than those who built Colleges, Work-Houses, and Hospitals. All that I would say, is, that we should not be too forwardly possessed with the Opinion or Expectation of Knowledge, where it is not to be had, or by Ways that will not attain it: That we should not take doubtful Systems for compleat Sciences; nor unintelligible Notions for scientifical Demonstrations. In the Knowledge of Bodies, we must be content to glean what we can from particular Experiments; since we cannot, from a Discovery of their real Essences, grasp at a Time whole Sheaves; and in Bundles comprehend the Na-

ture and Properties of whole Species together. Where our Enquiry is concerning Co-existence, or Repugnancy to co-exist, which by Contemplation of our Ideas we cannot discover; there Experience, Observation, and natural History, must give us by our Senses, and by Retail, an infight into corporeal Substances. The Knowledge of Bodies we must get by our Senses, warily employ'd in taking Notice of their Qualities and Operations on one another: And what we hope to know of separate Spirits in this World, we must, I think, expect only from Revelation. He that shall consider how little general Maxims, precarious Principles, and Hypothefes laid down at Pleasure, have promoted true Knowledge, or helped to fatisfy the Enquiries of rational Men after real Improvements; how little, I fay, the fetting out at that End has for many Ages together, advanced Mens Progress towards the Knowledge of natural Philosophy, will think we have Reason to thank those, who in this latter Age have taken another Course, and have trod out to us, though not an eafier Way to learned Ignorance, yet a furer Way to profitable Knowledge.

§. 13. Not that we may not, to explain any Phanomena of Nature, make use of any pro-The true Use of Hypotheses. bable Hypothesis whatsoever. Hypotheses, if

they are well made, are at least great Helps to

the Memory, and often direct us to new Discoveries. But my Meaning is, that we should not take up any one too hastily, (which the Mind, that would always penetrate into the Caufes of Things, and have Principles to rest on, is very apt to do) till we have very well examined Particulars, and made feveral Experiments in that Thing which we would explain by our Hypothesis, and see whether it will agree to them all; whether our Principles will carry us quite through, and not be as inconfiftent with one Phanomenon of Nature, as they feem to accommodate, and explain another. And at least that we take Care that the Name of Principles deceive us not, nor impose on us, by making us receive that for an unquestionable Truth, which is really at best but a very doubtful Conjecture, such as are most (I had almost said all) of the Hypotheles in natural Philosophy.

6. 14. But whether natural Philosophy be capable of Certainty or no, the Ways to enlarge our Knowledge, as far as we are capable, feem

to me, in fhort, to be these two:

Clear and distinet Ideas with settled Names, and

the finding of those which shew their Agreement or Disagreement, are the Ways to enlarge our Knowledge. First, The, first is to get and settle in our Minds determined Ideas of those Things, whereof we have general or specifick Names; at least of so many of them, as we would confider and improve our Knowledge in, or Reason about. And if they be specifick Ideas of Substances, we should endeavour also to make them as compleat as we can; whereby I mean that we should put together as many simple

Ideas, as being constantly observed to co-exist, may perfectly determine the Species; and each of those simple Ideas, which are the Ingredients of our complex one, should be clear and distinct in our Minds: For it being evident that our Knowledge cannot exceed our Ideas, as far as they are either imperfect, consused, or obscure, we cannot expect to have certain, perfect, or clear Knowledge.

Secondly, The other is the Art of finding out those intermediate Ideas, which may shew us the Agreement or Repugnancy of other Ideas, which cannot be immediately compared.

Mathematicks an Instance of it. §. 15. That these two (and not the relying on Maxims, and drawing Consequences from some general Propositions) are the right Method of improving our Knowledge in the *Ideas*

of our Modes, besides those of Quantity, the Confideration of Mathematical Knowledge will eafily inform us. Where first we shall find, that he that has not a perfect and clear Idea of those Angles or Figures, of which he defires to know any Thing, is utterly thereby uncapable of any Knowledge about them. Suppose but a Man not to have a perfect exact Idea of a right Angle, a Scalenum, or Trapezium, and there is nothing more certain, than that he will in vain feek any Demonstration about them. Farther it is evident, that it was not the Influence of those Maxims which are taken for Principles in Mathematicks, that hath led the Masters of that Science into those wonderful Discoveries they have made. Let a Man of good Parts know all the Maxims generally made use of in Mathematicks, never so perfectly, and contemplate their Extent and Consequences as much as he pleases, he will, by their Assistance, I suppose, fcarce ever come to know, that the Square of the Hypothenuse in a right angled Triangle, is equal to the Squares of the two other Sides. The Knowledge that the Whole is equal to all its Parts, and if you take Equals from Equals, the Remainder will be equal, &c. help'd him not, I presume, to this Considerations concerning our Knowledge. 269

this Demonstration: And a Man may, I think, pore long enough on those Axioms, without ever seeing one jot the more of Mathematical Truths. They have been discovered by the Thoughts otherwise applied; the Mind had other Objects, other Views before it, far different from those Maxims, when it first got the Knowledge of such kind of Truths in Mathematicks, which Men well enough acquainted with those received Axioms, but ignorant of their Method who first made these Demonstrations, can never sufficiently admire. And who knows what Methods, to enlarge our Knowledge in other Parts of Science, may hereaster be invented, answering that of Algebra in Mathematicks, which so readily finds out Ideas of Quantities to measure others by, whose Equality or Proportion we could otherwise very hardly, or perhaps never come to know?

CHAP. XIII.

Some farther Considerations concerning our Knowledge.

§. 1. OUR Knowledge, as in other Things, fo in this, has a great Conformity with our Sight, that it is neither wholly necessary, nor wholly voluntary. If our Knowledge were altogether necessary, all Mens Knowledge would not only be alike, but every

Our Knowledge partly necessary, partly voluntary.

Man would know all that is knowable; and if it were wholly voluntary, fome Men so little regard or value it, that they would have extream little, or none at all. Men that have Senses cannot chuse but receive some *Ideas* by them, and if they have Memory, they cannot but retain some of them; and if they have any distinguishing Faculty, cannot but perceive the Agreement or Disagreement of some of them one with another; as he that has Eyes, if he will open them by Day, cannot but see some Objects, and perceive a Difference in them. But though a Man with his Eyes open in the Light, cannot but see; yet there be certain Objects, which he may chuse whether he will turn his Eyes to; there may be in his reach a Book containing Pictures and Dissources capable

270 Considerations concerning our Knowledge.

capable to delight or inftruct him, which yet he may never have the Will to open, never take the Pains to look into.

§. 2. There is also another Thing in a Man's The Applica-Power, and that is, though he turns his Eyes tion voluntafometimes towards an Object, yet he may ry, but we chuse whether he will curiously survey it, and know as Things are, with an intent Application endeavour to obnot as we ferve accurately all that is visible in it. please. yet, what he does fee, he cannot fee otherwife It depends not on his Will to fee that Black than he does. which appears Yellow; nor to perfuade himself, that what actually fealds him, feels cold: The Earth will not appear painted with Flowers, nor the Fields covered with Verdure. whenever it has a Mind to it: In the cold Winter, he cannot help feeing it white and hoary, if he will look abroad. Just thus is it with our Understanding; all that is voluntary in our Knowledge, is the employing, or with-holding any of our Faculties from this or that fort of Objects, and a more or less accurate Survey of them; but they being employed, our Will hath no Power to determine the Knowledge of the Mind one way or other; that is done only by the Objects themselves, as far as they are clearly discovered. And therefore, as far as Mens Senses are conversant about external Objects, the Mind cannot but receive those Ideas which are prefented by them, and be informed of the Existence of Things without; and fo far as Mens Thoughts converse with their own determined Ideas, they cannot but, in some Measure, observe the Agreement and Disagreement that is to be found amongst some of them, which is so far Knowledge: and if they have Names for those Ideas which they have thus confidered, they must needs be affured of the Truth of those Propositions, which express that Agreement or Disagreement they perceive in them, and be undoubtedly convinced of those Truths. For what a Man fees, he cannot but fee, and what he perceives, he cannot but know that he perceives.

§. 3. Thus he that has got the *Ideas* of Num
Inflance in bers, and hath taken the Pains to compare one,

Numbers. two, and three, to fix, cannot chuse but know

that they are equal. He that hath got the

Idea of a Triangle, and found the Ways to measure its Angles,

and their Marriander is contain that its three Angles or

and their Magnitudes, is certain that its three Angles are equal to two right ones: And can as little doubt of that, as

of this Truth, that it is impossible for the same Thing to be, and not to be.

He also that hath the *Idea* of an intelligent, but frail and weak Being, made by and depending on another, who is cternal, omnipo-

In natural Religion.

tent, perfectly wise and good, will as certainly know that Man is to Honour, Fear, and Obey GOD, as that the Sun shines when he sees it. For if he hath but the Ideas of two such Beings in his Mind, and will turn his Thoughts that way, and consider them, he will as certainly find, that the inferior, finite, and dependent, is under an Obligation to obey the supream and infinite, as he is certain to find, that three, four and seven are less than sisten, if he will consider and compute those Numbers; nor can he be surer in a clear Morning that the Sun is risen, if he will but open his Eyes, and turn them that way. But yet these Truths being never so certain, never so clear, he may be ignorant of either, or all of them, who will never take the Pains to employ his Faculties as he should, to inform himself about them.

CHAP. XIV.

Of Judgment.

§. 1. THE Understanding Faculties being given to Man, not barely for Spe-Our Knowculation, but also for the Conduct of his ledge being Life, Man would be at a great Lofs, if he Soort, we want had nothing to direct him, but what has Jomething else. the Certainty of true Knowledge. For that being very short and scanty, as we have seen, he would be often utterly in the Dark, and in most of the Actions of his Life, perfectly at a fland, had he nothing to guide him in the Absence of clear and certain Knowledge. He that will not eat, till he has Demonstration that it will nourish him; he that will not flir, till he infallibly knows the Bufifiness he goes about will succeed, will have little else to do. but fit still and perish.

What Use to be made of this twilight State. §. 2. Therefore, as God has fet fome Things in broad Day-light, as he has given us fome certain Knowledge, though limited to a few Things in Comparison, probably, as a Taste of what intellectual Creatures are capable of,

to excite in us a Defire and Endeavour after a better State; fo, in the greatest part of our Concernment, he has afforded us only the Twilight, as I may fo fay, of Probability, fuitable, I prefume, to that State of Mediocrity and Probationership, he has been pleased to place us in here; wherein, to check our Over-confidence and Prefumption, we might by every Day's Experience, be made fenfible of our Shortfightedness, and Liableness to Error; the Sense whereof might be a constant Admonition to us, to spend the Days of this our Pilgrimage with Industry and Care, in the Search, and following of that way, which might lead us to a State of greater Perfection. It being highly rational to think, even were Revelation filent in the Case, that as Men employ those Talents God has given them here, they shall accordingly receive their Rewards at the Close of the Day, when their Sun shall set, and Night shall put an End to their Labours.

Judgment fupplies the Want of Knowledge. §. 3. The Faculty which God has given Man to supply the Want of clear and certain Knowledge, in Cases where that cannot be had, is fudgment: Whereby the Mind takes its Ideas to agree or disagree; or which is the same, any Proposition to be true or salse

without perceiving a demonstrative Evidence in the Proofs. The Mind fometimes exercises this Judgment out of Necesfity, where demonstrative Proofs, and certain Knowledge, are not to be had; and fometimes out of Laziness, Unskilfulness, or Haste, even where demonstrative and certain Proofs are to be had. Men often flay not warily to examine the Agreement or Difagreement of two Ideas, which they are defirous or concerned to know; but either incapable of fuch Attention as is requifite in a long Train of Gradations, or impatient of Delay, lightly cast their Eyes on, or wholly pass by the Proofs; and so, without making out the Demon-Aration, determine of the Agreement or Difagreement of two Ideas, as it were by a View of them as they are at a Distance, and take it to be the one or the other, as seems most likely to them upon such a loose Survey. culty of the Mind, when it is exercised immediately about Things Things, is called Judgment: when about Truths delivered in Words, is most commonly called Assent or Dissent: Which being the most usual way wherein the Mind has occasion to employ this Faculty, I shall, under these Terms, treat of it as least liable in our Language to Equivocation.

§. 4. Thus the Mind has two Faculties, con-

versant about Truth and Falshood.

First, Knowledge, whereby it certainly perceives, and is undoubtedly fatisfy'd of the Agreement or Disagreement of any Ideas.

Judgment is the prefuming Things to be fo, without perceiving it.

Secondly, Judgment, which is the putting Ideas together, or feparating them from one another in the Mind, when their certain Agreement or Disagreement is not perceived, but presumed to be so; which is, as the Word imports, taken to be so, before it certainly appears. And if it so unites, or separates them, as in reality Things are, it is right Judgment.

CHAP. XV.

Of Probability,

§. 1. A S Demonstration is the shewing the Agreement or Disagreement of two Probability is Ideas, by the Intervention of one or more the Appear-Proofs which have a constant, immutable, ance of Agreeand visible Connection one with another; so ment upon fallible Proofs. Probability is nothing but the Appearance of fuch an Agreement or Disagreement, by the Intervention of Proofs, whose Connection is not constant and immutable, or at least is not perceived to be so, but is, or appears, for the most part to be so, and is enough to induce the Mind to judge the Proposition to be true or falle, rather than the contrary. For Example: In the Demonstration of it, a Man perceives the certain immutable Connection there is of equality between the three Angles of a Triangle, aud those intermediate ones, which are made use of to show their Equality to two right ones; and fo, by an intuitive Knowledge of the Agreement or Diagreement of the intermediate Ideas in each Step of the Progress, the whole Series is continued with an Evidence, which clearly shows the A-Vol. II. greamant greement or Disagreement of those three Angles in Equality to two right ones: And thus he has certain Knowledge that it is fo. But another Man, who never took the Pains to obferve the Demonstration, hearing a Mathematician, a Man of Credit, affirm the three Angles of a Triangle, to be equal to two right ones, affents to it, i. e. receives it for true. which Case, the Foundation of his Assent is the Probability of the Thing, the Proof being fuch as for the most part carries Truth with it: The Man, on whose Testimony he receives it, not being wont to affirm any thing contrary to, or befides his Knowledge, especially in Matters of this kind. So that that which causes his Assent to this Proposition, that the three Angles of a Triangle are equal to two right ones, that which makes him take these Ideas to agree, without knowing them to do fo, is the wonted Veracity of the Speaker in other Caies, or his supposed Veracity in this.

It is to supply the Want of Knowledge. §. 2. Our Knowledge, as has been flewn, being very narrow, and we not happy enough to find certain Truth in every Thing which we have occasion to consider, most of the Propositions we think, reason, discourse, nay, act up-

on, are fuch as we cannot have undoubted Knowledge of their Truth; yet fome of them border so near upon Certainty, that we make no doubt at all about them, but assent to them as firmly, and act, according to that Assent, as resolutely as if they were infallibly demonstrated, and that our Knowledge of them was perfect and certain. But there being Degrees herein, from the very Neighbourhood of Certainty and Demonstration, quite down to Improbability and Unlikelines, even to the Consines of Impossibility; and also Degrees of Assent from sull Assence and Considence, quite down to Conjecture, Doubt and Distruss; I shall come now, (having, as I think, sound out the Bounds of human Knowledge and Certainty) in the next Place, to consider the several Degrees and Grounds of Probability, and Assent or Faith.

Being that which makes us prefume Things to be true, before we know them to be fo.

§. 3. Probability is Likeliness to be true, the very Notation of the Word fignifying such a Proposition, for which there be Arguments or Proofs, to make it pass, or be received for true. The Entertainment the Mind gives this fort of Propositions, is called Belief, Assent, or Opinion, which is the admitting or receiving any Proposition for true, upon Arguments, or

Proofs

The Grounds of Probability

are two; Con-

formity with

our ocon Ex-

perience, or

Proofs that are found to persuade us to receive it as true, without certain Knowledge that it is fo. And herein lies the Difference between Probability and Certainty, Faith and Knowledge, that in all the Parts of Knowledge, there is Intuition; each immediate Idea, each Step has its visible and certain Connection; in Belief not fo. That which makes me believe, is formething extraneous to the Thing I believe; fomething not evidently joined on both fides to, and not fo manifestly shewing the Agreement or Disagreement of those Ideas that are under Confideration.

§. 4. Probability then, being to supply the Defect of our Knowledge, and to guide us where that fails, is always conversant about Propositions whereof we have no Certainty, but only fome Inducements to receive them for The Grounds of it are, in short, these

two following:

the Testimony First, The Conformity of any Thing with of others Exour own Knowledge, Observation, and Experience.

perience.

Secondly, The Testimony of others, vouching their Observation and Experience. In the Testimony of others, is to be confidered, 1. The Number. 2. The Integrity. 3. The Skill of the Witnesses. 4. The Design of the Author, where it is a Testimony out of a Book cited. 5. The Consistency of the Parts and Circumstances of the Relation. 6. Contrary Testimonies.

§. 5. Probability wanting that intuitive Evidence which infallibly determines the Understanding, and produces certain Knowledge, the Mind, if it would proceed rationally, ought to examine all the Grounds of Probability, and fee how they make more or lefs, for or against any Proposition, before it asfents to, or diffents from it, and upon a due balancing the Whole, reject or receive it, with

In this, all the Agreements pro and con, ought to be examined, before we come to a Juagment.

a more or less firm Assent, proportionably to the Preponderancy of the greater Grounds of Probability on one fide or the

other. For Example:

If I my felf see a Man walk on the Ice, it is past Probability, 'tis Knowledge: But if another tells me he saw a Man in England, in the midft of a sharp Winter, walk upon Water hardened with Cold; this has fo great Conformity Т 2

with what is usually observed to happen, that I am disposed by the Nature of the thing it felf, to affent to it, unless fome manifest Suspicion attend the Relation of that Matter of Fact. But if the same Thing be told to one born between the Tropicks, who never faw nor heard of any fuch Thing before, there the whole Probability relies on Testimony: And as the Relators are more in Number, and of more Credit, and have no Interest to speak contrary to the Truth; so that Matter of Fact is like to find more or less Belief. Though to a Man, whose Experience has been always quite contrary, and has never heard of any thing like it, the most untainted Credit of a Witness will scarce be able to find Belief. And as it happened to a Dutch Ambassador, who entertaining the King of Siam with the Particularities of Holland, which he was inquifitive after, amongst other Things told him, that the Water in his Country would fometimes, in cold Weather, be so hard that Men walked upon it, and that it would bear an Elephant, if he were there. To which the King reply'd, Hitherto I have believed the strange Things you have told me, because I look upon you as a sober fair Man; but now I am fure you lye.

§. 6. Upon these Grounds depends the Probability of any Proposition: And as the Paper Conformity of our Knowledge, as the Certainty of Observations, as the Frequency and Control of the Proposition of the

flancy of Experience, and the Number and Credibility of Testimonies, do more or less agree or disagree with it, fo is any Proposition in it felf, more or less probable. There is another, I confess, which though by it self it be no true Ground of Probability, yet is often made use of for one, by which Men most commonly regulate their Assent, and upon which they pin their Faith more than any thing elfe, and that is the Opinion of others: though there cannot be a more dangerous thing to rely on, nor more likely to mislead one, fince there is much more Falfhood and Error among Men, than Truth and Knowledge. And if the Opinions and Perfunfions of others, whom we know and think well of, be a Ground of Affent, Men have Reason to be Heathens in Japan, Mahometans in Turkey, Papists in Spain, Protestants in England, and Lutherans in Sweden. But of this wrong Ground of Assent, I shall have Occasion to speak more at large in another Place.

CHAP. XVI.

Of the Degrees of Assent.

§. 1. THE Grounds of Probability we have laid down in the foregoing Chapter; as they are the Foundations on which our Affent is built, fo are they also the Measure whereby its several Degrees are, or ought to be regulated: Only we are to take Notice, that whatever Grounds of Probabilities they are the several probabilities and the several probabilities are several probabilities.

Our Affent ought to be regulated by the Grounds of Probability.

bability there may be, yet they operate no farther on the Mind, which fearches after Truth, and endeavours to judge right, than they appear, at least in the first Judgment or Search that the Mind makes. I confess, in the Opinions Men have, and firmly flick to, in the World, their Assent is not always from an actual View of the Reasons that at first prevailed with them; it being in many Cases almost impossible, and in most very hard, even for those who have very admirable Memories, to retain all the Proofs, which, upon a due Examination, made them embrace that fide of the Question. It fuffices that they have once, with Care and Fairness, fifted the Matter as far as they could; and that they have fearched into all the Particulars that they could imagine, to give any Light to the Question, and with the best of their Skill, cast up the Account upon the whole Evidence: And thus having once found on which fide the Probability appeared to them, after as full and exact an Enquiry as they can make, they lay up the Conclusion in their Memories, as a Truth they have discovered; and for the future they remain satisfied with the Testimony of their Memories, that this is the Opinion, that, by the Proofs they have once feen of it, deferves such a Degree of their Assent as they afford it.

§. 2. This is all that the greatest Part of Men are capable of doing, in regulating their Opinions and Judgments, unless a Man will exact of them, either to retain distinctly in their Memories all the Proofs concerning any probable Truth, and that too in the same Or-

These cannot always be assually in View, and then we must content our

Scleres with the remembrance that rue once faw Ground for such a Degree of Affent.

der, and regular Deduction of Confequences, in which they have formerly placed or feen them; which fometimes is enough to fill a large Volume upon one fingle Queffion: Or elfe they must require a Man, for every Opinion that he embraces, every Day to examine the Proofs; both which are impossible.

is unavoidable therefore, that the Memory be relied on in the Case, and that Men be perfuaded of several Opinions, whereof the Proofs are not actually in their Thoughts; nay, which perhaps they are not able actually to recal. Without this, the greatest part of Men must be either very Scepticks, or change every Moment, and yield themselves up to whoever, having lately studied the Question, offers them Arguments; which, for want of Memory, they are not able presently to Answer.

The ill Confequence of this, if our former Judgment were not rightly made.

S. 3. I cannot but own, that Mens flicking to their past Judgment, and adhering firmly to Conclusions formerly made, is often the Cause of great Obstinacy in Error and Mistake. But the Fault is not that they rely on their Memories for what they have before well judged, but because they judged before they had well examined. May we not find a

great Number (not to fay the greatest Part) of Men, that think they have formed right Judgments of feveral Matters, and that for no other Reason, but because they never thought otherwise? That imagine themselves to have judged right, only because they never questioned, never examined their own Opinions? Which is indeed to think they judged right, because they never judged at all: And yet these, of all Men, hold their Opinions with the greatest Stiffness; those being generally the most fierce and firm in their Tenets, who have least examined them. What we once know, we are certain is fo; and we may be secure that there are no latent Proofs undiscovered, which may overturn our Knowledge, or bring it in Doubt. But in Matters of Probability, 'tis not in every Cafe we can be fure that we have all the Particulars before us, that any way concern the Question; and that there is no Evidence behind, and yet unfeen, which may cast the Probability on the other fide, and outweigh all that at prefent feems to preponderate with us. Who almost is there that hath the Leifure, Patience, and Means to collect together all the Proofs concerning most of the Opinions he hae, so as safely to conclude, that he hath a clear and full View, and that there is no more to be alledged for his better Information? And yet we are forced to determine our selves on the one side or other. The Conduct of our Lives, and the Management of our great Concerns, will not bear Delay; for those depend, for the most part, on the Determination of our Judgment in Points wherein we are not capable of certain and demonstrative Knowledge, and wherein it is necessary for us to embrace the one side or the other.

§. 4. Since therefore it is unavoidable to the greatest part of Men, if not all, to have several *Opinions*, without certain and indubitable Proofs of their Truths; and it carries too great an Imputation of Ignorance, Lightness, or Folly, for Men to quit and renounce their

The right Use of it, mutual Charity and Forbearance.

former Tenets prefently upon the offer of an Argument which they cannot immediately answer, and shew the Infufficiency of: it would methinks become all Men to maintain Peace, and the common Offices of Humanity and Friendship, in the Diversity of Opinions, since we cannot reasonably expect, that any one should readily and obsequiously quit his own Opinion, and embrace ours, with a blind Refignation to an Authority which the Understanding of Man acknowledges For however it may often mistake, it can own no other Guide but Reason, nor blindly submit to the Will and Di-Etates of another. If he you would bring over to your Sentiments, be one that examines before he Assents, you must give him Leave at his Leifure to go over the Account again, and recalling what is out of his Mind, examine all the Particulars, to fee on which fide the Advantage lies; and if he will not think our Arguments of Weight enough to engage him anew in 10 much Pains, 'tis but what we do often our felves in the like Case; and we should take it amiss, if others should prescribe to us what Points we should study: And if he be one who takes his Opinions upon Trust, how can we imagine that he should renounce those Tenets which Time and Custom have so settled in his Mind, that he thinks them felf-evident, and of an unquestionable Certainty; or which he takes to be Impressions he has received from GOD himself, or from Men sent by him? How can we expect, I fay, that Opinions thus fettled, should be given up to the Arguments

Arguments or Authority of a Stranger or Adversary, especially if there be any Suspicion of Interest or Design, as there never fails to be where Men find themselves ill treated? We fhould do well to commiferate our mutual Ignorance, and endeavour to remove it in all the gentle and fair Ways of Information, and not inflantly treat others ill, as obstinate and perverse, because they will not renounce their own, and receive our Opinions, or at least those we would force upon them. when 'tis more than probable that we are no less obstinate in not embracing some of theirs. For where is the Man that has uncontestable Evidence of the Truth of all that he holds, or of the Falshood of all he condemns; or can fay, that he has examined, to the Bottom, all his own, or other Mens Opinions? The Necessity of believing, without Knowledge, nay often upon very flight Grounds, in this fleeting State of Action and Blindness we are in, should make us more busy and careful to inform our felves, than conftrain others; at least those who have not throughly examined to the Bottom all their own Tenets, must confess they are unfit to prescribe to others, and are unreasonable in imposing that as Truth on other Mens Belief, which they themselves have not searched into, nor weighed the Arguments of Probability on which they should receive or reject it. Those who have fairly and truly examined, and are thereby got past Doubt in all the Doctrines they profess, and govern themselves by, would have a juster Pretence to require others to follow them: But these are so few in Number, and find so little Reason to be magisterial in their Opinions, that nothing infolent and imperious is to be expected from them: And there is Reason to think, that if Men were better inftructed themselves, they would be less imposing on others.

\$. 5. But to return to the Grounds of Affent, and the feveral Degrees of it, we are to take Notice, that the Propositions we receive upon Inducements of Probability, are of two Speculation.

\$\int_{Probability}\$ is fent, and the feveral Degrees of it, we are to take Notice, that the Propositions we receive upon Inducements of Probability, are of two Sorts, either concerning some particular Existence, or, as it is usually termed, Matter of

Fact, which falling under Observation, is capable of Human Testimony; or else concerning Things, which being beyond the Discovery of our Senses, are not capable of any such Testunony.

§. 6. Concerning the first of these, viz. par-

ticular Matter of Fact.

First, Where any particular Thing, consonant to the constant Observation of our selves and others in the like Case, comes attested by the concurrent Reports of all that mention it, we receive it as easily, and build as firmly upon it, as if it were certain Knowledge: and we reason and act thereupon with as little Doubt,

The concurrent Experience of all other Men with ours, produces Affurance approaching to Knowledge.

as if it were perfect Demonstration. Thus, if all English Men, who have Occasion to mention it, should affirm that it froze in England the last Winter, or that there were Swallows feen there in the Summer, I think a Man could almost as little doubt of it, as that feven and four are eleven. The first therefore, and highest Degree of Probability, is, when the general Consent of all Men, in all Ages, as far as it can be known, concurs with a Man's conftant and never failing Experience in like Cases, to confirm the Truth of any particular Matter of Fact attested by fair Witnesses; such are all the stated Constitutions and Properties of Bodies, and the regular Proceedings of Causes and Effects in the ordinary Course of Nature. This we call an Argument from the Nature of Things themselves: For what our own and other Mens conftant Observation has found always to be after the fame Manner, that we with Reason conclude to be the Effects of fleddy and regular Causes, though they come not Thus, that Fire within the Reach of our Knowledge. warmed a Man, made Lead fluid, and changed the Colour or Confistency in Wood or Charcoal; that Iron funk in Water. and fwam in Quickfilver: These, and the like Propositions about particular Facts, being agreeable to our constant Experience, as often as we have to do with these Matters, and being generally spoke of, (when mentioned by others) as Things found constantly to be fo, and therefore not fo much as controverted by any Body, we are put past Doubt, that a Relation affirming any such Thing to have been, or any Predication that it will happen again in the fame Manner, is very These Probabilities rise so near to Certainty, that they govern our Thoughts as absolutely, and influence all our Actions as fully, as the most evident Demonstration; and in what concerns us, we make little or no Difference between them and certain Knowledge. Our Belief thus grounded, rifes to Affurance,

Unquestionable Testimony and Experience for the most Part produce Constdence. §. 7. Secondly, The next Degree of Probability is, when I find by my own Experience, and the Agreement of all others that mention it, a Thing to be for the most part so: and that the particular Instance of it is attested by many and undoubted Witnesses, v. g. History giving us such an Account of Men in all Ages, and my own Experience, as far as I had an Opportunity to observe, confirming it, that

most Men preser their private Advantage to the publick: If all Historians that write of *Tiberius*, say that *Tiberius* did so, it is extremely probable. And in this Case, our Assent has a sufficient Foundation to raise it self to a Degree which we

may call Confidence.

Fair Testimony, and the Nature of the Thing indisferent, produces also confident Belief.

§. 8. Thirdly, In Things that happen indifferently, as that a Bird should fiy this or that way, that it should Thunder on a Man's right or left Hand, &c. when any particular Matter of Fact is vouched by the concurrent Testimony of unsufpected Witnesses, there our Assentials also unavoidable. Thus, that there is such a City in Italy as Rome; that about 1700 Years ago, there lived in it a Man

called Julius Casar; that he was a General, and that he won a Battel against another called Pompey: This, though in the Nature of the Thing there be nothing for nor against it, yet being related by Historians of Credit, and contradicted by no one Writer, a Man cannot avoid believing it, and can as little doubt of it, as he does of the Being and Actions of his own Acquaintance, whereof he himself is a Witness.

Experiences and Testimonies classing, infinitely vary the Degrees of Probability. §. 9. Thus far the Matter goes easy enough. Probability upon such Grounds carries so much Evidence with it, that it naturally determines the Judgment, and leaves us as little Liberty to believe or disbelieve, as a Demonstration does, whether we will know or be ignorant. The Difficulty is, when Testimonies contradict common Experience, and the Reports of

History and Witnesses clash with the ordinary Course of Nature, or with one another; there it is, where Diligence, Attention and Exactness is required to form a right Judgment, and to proportion the Assert to the different Evidence and Probability of the Thing, which rises and falls according as those two Foundations of Credibility, viz. Common Observation

vation in like Cases, and particular Testimonies in that particular Instance, favour or contradict it. These are liable to so great Variety of Contrary Observations, Circumstances, Reports, different Qualifications, Tempers, Designs, Oversights, &c. of the Reporters, that 'tis impossible to reduce to precise Rules, the various Degrees wherein Men give their Assent. This only may be said in general, that as the Arguments and Proofs, fro and con, upon due Examination, nicely weighing every particular Circumstance, shall to any one appear, upon the whole Matter, in a greater or less Degree to preponderate on either side, so they are sitted to produce in the Mind such different Entertainment, as we call Belief, Conjecture, Guess, Doubt, Wavering, Distrust, Disbelief, &c.

§. 10. This is what concerns Affent in Matters wherein Testimony is made use of; concerning which, I think it may not be amiss to take Notice of a Rule observed in the Law of England, which is, that though the attested Copy of a Record be good Proof, yet the Copy of a Correspond to well attested, and by power so well attested.

Traditional Testimonies, the farther remov'd, the less their Proof.

py never fo well attefted, and by never fo credible Witnesses, will not be admitted as a Proof in Judicature. This is fo generally approved as reasonable, and suited to the Wisdom and Caution to be used in our Enquiry after material Truths, that I never yet heard of any one that blamed it. This Practice, if it be allowable in the Decisions of Right and Wrong, carries this Observation along with it, viz. That any Testimony, the farther off it is from the Original Truth, the less Force and Proof it has. The Being and Existence of the Thing it felf, is what I call the original Truth. A credible Man vouching his Knowledge of it, is a good Proof: But if another equally credible do witness it from his Report, the Testimony is weaker; and a third that attests the Hear-say of an Hear-say, is yet less considerable. So that in traditional Truth, each Remove weakens the Force of the Proof; and the more Hands the Tradition has successively passed through, the less Strength and Evidence does it receive from them. This I thought necessary to be taken Notice of, because I find amongst some Men the quite contrary commonly practifed, who look on Opinions to gain Force by growing older; and what a Thousand Years fince would not, to a rational Man, contemporary with the first Voucher, have appeared at all probable, is now urged as certain beyond all Question, only becaufe

because several have since, from him, said it one after another. Upon this Ground, Propositions evidently salse or doubtful enough in their first beginning, come by an inverted Rule of Probability to pass for authentick Truths; and those which found or deserved little Credit from the Mouths of their first Authors, are thought to grow venerable by Age, and are urged as undeniable.

§. 11. I would not be thought here to leffen the Credit and Use of History: 'Tis all the Light we have in many Cases; and we receive from it a great part of the useful Truths we

have, with a convincing Evidence. I think nothing more valuable than the Records of Antiquity: I wish we had more of them, and more uncorrupted. But this Truth it felf forces me to fay, That no Probability can arise higher than its first Original. What has no other Evidence than the fingle Testimony of one only Witness, must stand or fall by his only Testimony, whether good, bad, or indifferent; and though cited afterwards by Hundreds of others, one after another, is fo far from receiving any Strength thereby, that it is only the weaker. Passion, Interest, Inadvertency, Mistake of his Meaning, and a Thousand odd Reasons or Capricio's Mens Minds are acted by, (impossible to be discovered) may make one Man quote another Man's Words or Meaning wrong. He that has but ever fo little examined the Citations of Writers cannot doubt how little Credit the Quotations deferve, where the Originals are wanting; and confequently how much lefs, Quotations of Quotations can be relyed on. This is certain, that what in one Age was affirmed upon flight Grounds, can never after come to be more valid in future Ages, by being often repeated. But the farther still it is from the Original, the less valid it is, and has always less Force in the Mouth or Writing of him that last made use of it, than in his from whom he received it.

In Things which Sense cannot discover, Analogy is the great Rule of Probability.

§. 12. The Probabilities we have hitherto mentioned, are only such as concern Matter of Fact, and such Things as are capable of Obfervation and Testimony. There remains that other fort, concerning which Men entertain Opinions with Variety of Assent, though the Things be such, that falling not under the Reach of our Senses, they are not capable of

Testimony. Such are, 1. The Existence, Nature and Operations

tions of finite immaterial Beings, without us; as Spirits, Angels, Devils, &c. or the Existence of material Beings, which either for their Smallness in themselves, or Remoteness from us, our Senses cannot take Notice of; as whether there be any Plants, Animals, and intelligent Inhabitants in the Planets, and other Mansions of the vast Universe. 2. Concerning the manner of Operation in most Parts of the Works of Nature; wherein, tho' we fee the fenfible Effects, yet their Causes are unknown, and we perceive not the Ways and Manner how they are produced. We see Animals are generated, nourished, and move: The Loadstone draws Iron; and the Parts of a Candle fuccessively melting, turn into Flame, and give us both Light and Heat. These and the like Effects we see and know; but the Causes that operate, and the Manner they are produced in, we can only guess, and probably conjecture. For these, and the like, coming not within the Scrutiny of human Senses, cannot be examined by them, or be attested by any Body, and therefore can appear more or less probable, only as they more or less agree to Truths that are established in our Minds, and as they hold Proportion to other Parts of our Knowledge and Observation. Analogy in these Matters, is the only help we have, and 'tis from that alone we draw all our Grounds of Probability. Thus observing that the bare Rubbing of two Bodies violently one upon another, produces Heat, and very often Fire it felf, we have Reason to think, that what we call Heat and Fire, confifts in a violent Agitation of the imperceptible minute Parts of the burning Matter: Observing likewise that the different Refractions of pellucid Bodies produce in our Eyes the different Appearances of feveral Colours; and also that the different ranging and laying the superficial Parts of feveral Bodies, as of Velvet, watered Silk, &c. does the like, we think it probable that the Colour and Shining of Bodies, is in them nothing but the different Arangement and Refraction of their minute and fenfible Parts. Thus finding in all Parts of the Creation, that fall under human Observation, that there is a gradual Connection of one with another without any great or difcernible Gaps between, in all that great Variety of Things we fee in the World, which are fo closely linked together, that, in the feveral Ranks of Beings, it is not easy to discover the Bounds betwixt them, we have Reason to be perfuaded, that by such gentle Steps Things ascend upwards in Degrees of Perfection. 'Tis an hard Matter to fay where Senfible and Rational begin, and where Infenfible and Irrational end: And who is there quick-fighted enough to determine precifely, which is the lowest Species of living Things, and which the first of those which have no Life? Things, as far as we can observe, lessen and augment, as the Quantity does in a regular Cone, where, though there be a manifest Odds betwixt the Bigness of a Diameter at remote Distance, yet the Difference between the upper and under, where they touch one another, is hardly difcernible. The Difference is exceeding great between some Men, and fome Animals; but if we will compare the Understanding and Abilities of some Men, and some Brutes, we shall find fo little Difference, that 'twill be hard to fay, that that of the Man is either clearer or larger. Observing, I say, such gradual and gentle Descents downwards in those Parts of the Creation that are beneath Man, the Rule of Analogy may make it probable, that it is fo also in Things above us and our Observation; and that there are several Ranks of intelligent Beings, excelling us in feveral Degrees of Perfection, afcending upwards towards the infinite Perfection of the Creator, by gentle Steps and Differences, that are every one at no great Distance from the next to it. This fort of Probability, which is the best Conduct of rational Experiments, and the Rife of Hypothesis, has also its Use and Influence; and a wary Reasoning from Analogy, leads us often into the Discovery of Truths, and useful Productions, which would otherwise lye concealed.

One Case where contrary Experience lessens not the Testimony. §. 13. Though the common Experience, and the ordinary Course of Things, have justly a mighty Influence on the Mindsof Men, to make them give or resuse Credit to any Thing proposed to their Belief; yet there is one Case wherein the Strangeness of the Fact lessens not the Assent to a fair Testimony given of it. For where

fuch supernatural Events are suitable to Ends aimed at by him, who has the Power to change the Course of Nature, there, under such Circumstances, they may be the fitter to procure Belief, by how much the more they are beyond, or contrary to ordinary Observation. This is the proper Case of *Miracles*, which, well attested, do not only find Credit themselves, but give it also to other Truths, which need such Confirmation.

§. 14. Besides those we have hitherto mentioned, there is one fort of Propositions that challenge the highest Degree of our Assent upon bare Testimony, whether the Thing proposed, agree or disagree with common Experience, and the ordinary Course of Things, or no. The Reason whereof is, because the

The bare Testimony of Revelation, is the highest Certainty.

Testimony is of such an one as cannot deceive, nor be deceived, and that is of God himself. This carries with it Affurance beyond Doubt, Evidence beyond Exception. This is called by a peculiar Name, Revelation, and our Affent to it, Faith: Which as absolutely determines our Minds, and as perfectly excludes all wavering, as our Knowledge it felf; and we may as well doubt of our own Being, as we can, whether any Revelation from God be true. So that Faith is a fettled and fure Principle of Affent and Affurance, and leaves no manner of room for doubt or Hesitation. Only we must be sure, that it be a divine Revelation, and that we understand it right; else we shall expose our selves to all the Extravagancy of Enthusiasm, and all the Error of wrong Principles, if we have Faith and Affurance in what is not divine Revelation. And therefore, in those Cases our Assent can be rationally no higher than the Evidence of its being 2 Revelation, and that this is the Meaning of the Expressions it's delivered in. If the Evidence of its being a Revelation, or that this is its true Sense, be only on probable Proofs, our Assent can reach no higher than an Assurance or Diffidence, arifing from the more or less apparent Probability of the Proofs. But of Faith, and the Precedency it ought to have before other Arguments of Persuasion, I shall speak more hereafter, where I treat of it, as it is ordinarily placed. in Contradiffinction to Reason; though in Truth, it be nothing else but an Assent founded on the highest Reason.

CHAP. XVII.

Of Reason.

Various Significations of the Word Reason.

§. 1. THE Word Reason, in the English Language, has different Significations: Sometimes it is taken for true and clear Principles; fometimes for clear and fair Deductions from those Principles; and sometimes for the Caufe, and particularly the final

But the Confideration I shall have of it here, is in a Signification different from all thefe; and that is, as it stands for a Faculty in Man, that Faculty whereby Man is fupposed to be distinguished from Beasts, and wherein it is evi-

dent he much furpailes them.

Wherein Reasoning consists.

§. 2. If general Knowledge, as has been fhewn, confifts in a Perception of the Agreement or Disagreement of our own *Ideas*, and the Knowledge of the Existence of all Things without us, (except only of a God, whose Ex-

istence every Man may certainly know and demonstrate to himfelf from his own Existence) be had only by our Senses: What Room then is there for the Exercise of any other Faculty, but outward Sense, and inward Perception? What need is there of Reason? Very much; both for the Enlargement of our Knowledge, and regulating our Assent: for it hath to do both in Knowledge and Opinion, and is necessary and affifting to all our other intellectual Faculties, and indeed, contains two of them, viz. Sagacity and Illation. By the one, it finds out, and by the other, it so orders the intermediate Ideas, as to discover what Connection there is in each Link of the Chain, whereby the Extreams are held together; and thereby, as it were, to draw into View the Truth fought for, which is that we call Illation or Inference, and confifts in nothing but the Perception of the Connection there is between the Ideas, in each Step of the Deduction, whereby the Mind comes to fee either the certain Agreement or Difagreement of any two Ideas, as in Demonstration, in which it arrives at KnowKnowledge: or their probable Connection, on which it gives or withholds its Affent, as in Opinion. Senfe and Intuition reach but a very little way. The greatest Part of our Knowledge depends upon Deductions and intermediate Ideas: And in those Cases, where we are fain to substitute Assent instead of Knowledge, and take Propositions for true, without being certain they are so, we have need to find out, examine, and compare the Grounds of their Probability. both these Cases, the Faculty which finds out the Means, and rightly applies them to discover Certainty in the one. and Probability in the other, is that which we call Reason. For as Reason perceives the necessary and indubitable Connection of all the Ideas or Proofs one to another, in each Step of any Demonstration that produces Knowledge: fo it likewife perceives the probable Connection of all the *Ideas* or Proofs one to another, in every Step of a Discourse to which it will think Assent due. This is the lowest Degree of that which can be truly called Reason. For where the Mind does not perceive this probable Connection; where it does not discern whether there be any such Connection or no, there Mens Opinions are not the Product of Judgment, or the Confequence of Reason, but the Effects of Chance and Hazard of a Mind floating at all Adventures, without Choice, and without Direction.

§. 3. So that we may in Reason consider these four Degrees; the first and highest, is Its four the discovering and finding out of Proofs; the Parts. fecond, the regular and methodical Disposition of them, and laying them in a clear and fit Order, to make their Connection and Force be plainly and eafily perceived; the third is the perceiving their Connection; and the fourth, a making a right Conclusion. These several Degrees may be observed in any mathematical Demonstration: It being one Thing to perceive the Connection of each Part, as the Demonstration is made by another; another to perceive the Dependence of the Conclusion on all the Parts; a third to make out a Demonstration clearly and neatly one's felf; and something different from all these, to have first found out those intermediate *Ideas* or Proofs by which it is made.

Vol. II. U §. 4.

Syllogism not the great Instrument of Reason. §. 4. There is one Thing more, which I shall defire to be considered concerning Reafon: and that is, whether Syllogism, as is generally thought, be the proper Instrument of it, and the usefullest way of exercising this Fa-

culty. The Caufes I have to doubt, are these:

First, Because Syllogism serves our Reason but in one only of the fore-mentioned Parts of it; and that is, to shew the Connection of the Proofs in any one Instance, and no more; but in this it is of no great Use, since the Mind can perceive such Connection where it really is, as easily, nay perhaps bet-

ter, without it.

If we will observe the Acting of our own Minds, we shall find that we reason best and clearest, when we only obferve the Connection of the Proof, without reducing our Thoughts to any Rule of Syllogism. And therefore we may take Notice, that there are many Men that reason exceeding clear and rightly, who know not how to make a Syllogism. He that would look into many Parts of Asia and America, will find Men reason there, perhaps, as acutely as himself, who yet never heard of a Syllogism, nor can reduce any one Argument to those Forms: And I believe scarce any one ever makes Syllogisms in Reasoning within himself. Indeed Syllogism is made use of on Occasion to discover a Fallacy hid in a rhetorical Flourish, or cunningly wrapped up in a smooth Period; and stripping an Absurdity of the Cover of Wit and good Language, shew it in its naked Deformity. But the Weakness or Fallacy of such a loose Discourse, it shews, by the artificial Form it is put into, only to those who have throughly fludy'd Mode and Figure, and have fo examined the many ways that three Propositions may be put together, as to know which of them does certainly conclude right, and which not, and upon what Grounds it is that they do fo. All who have fo far confidered Syllogism, as to see the Reason why, in three Propositions laid together in one Form, the Conclusion will be certainly right, but in another, not certainly fo, I grant are certain of the Conclusions they draw from the Premises in the allowed Modes and Figures. But they who have not fo far looked into those Forms, are not sure, by Virtue of Syllogism, that the Conclusion certainly follows from the Premifes; they only take it to be fo by an implicit Faith in their Teachers, and a Confidence in those Forms of Argumentation: but this is still but believing, not being certain. Now,

if of all Mankind, those who can make Syllogisms, are extreamly sew in Comparison of those who cannot, and if of those sew who have been taught Logick, there is but a very small Number who do any more than believe that Syllogisms in the allowed Modes and Figures do conclude right, without knowing certainly that they do so; if Syllogisms must be taken for the only proper Instrument of Reason and Means of Knowledge, it will follow, that before Aristotle there was not one Man that did, or could know any thing by Reason; and that since the Invention of Syllogisms, there is not one of Ten Thousand that doth.

But God has not been fo sparing to Men to make them barely two-legged Creatures, and left it to Aristotle to make them rational, i. e. those few of them that he could get so to examine the Grounds of Syllogisms, as to see, that in above Threescore ways, that three Propositions may be laid together, there are but about Fourteen wherein one may be fure that the Conclusion is right, and upon what Ground it is, that in these sew the Conclusion is certain, and in the other not. God has been more bountiful to Mankind than fo: He has given them a Mind that can reason without being instructed in Methods of Syllogizing: The Understanding is not taught to Reason by these Rules; it has a native Faculty to perceive the Coherence or Incoherence of its Ideas, and can range them right, without any fuch perplexing Repetitions. I fay not this any way to leffen Ariffotle, whom I look on as one of the greatest Men amongst the Antients; whose large Views, Acuteness, and Penetration of Thought, and Strength of Judgment, few have equalled: And who in this very Invention of Forms of Argumentation, wherein the Conclusion may be shewn to be rightly inferred, did great Service against those who were not ashamed to deny any Thing. And I readily own, that all right Reasoning may be reduced to his Forms of Syllogism. But yet I think, without any Diminution to him, I may truly fay, that they are not the only, nor the best way of Reasoning, for the leading of those into Truth who are willing to find it, and defire to make the best Use they may of their Reason, for the Attainment of Knowledge. And he himfelf, it is plain, found out fome Forms to be conclusive, and others not; not by the Forms them--selves, but by the original way of Knowledge, i. e. by the visible Agreement of Ideas. Tell a Country Gentlewoman, that the Wind is South-West, and the Weather lowring, and U 2 like like to rain, and fhe will eafily understand, 'tis not safe for her to go abroad thin clad, in such a Day, after a Fever: She clearly sees the probable Connection of all these, viz. South West Wind, and Clouds, Rain, Wetting, taking Cold, Relapse, and Danger of Death, without tying them together in those artificial and cumbersome Fetters of several Syllogisms, that clog and hinder the Mind, which proceeds from one part to another quicker and clearer without them: And the Probability which she easily perceives in Things thus in their native State would be quite lost, if this Argument were managed learnedly, and proposed in Mode and Figure. For it very often consounds the Connection: And, I think, every one will perceive in Mathematical Demonstrations, that the Knowledge gained thereby, comes shortest and clearest without Syllogism.

Inference is looked on as the great Act of the rational Faculty, and so it is, when it is rightly made; but the Mind, either very defirous to enlarge its Knowledge, or very apt to favour the Sentiments it has once imbibed, is very forward to make Inferences, and therefore often makes too much haste, before it perceives the Connection of the *Ideas* that

must hold the Extreams together.

To infer, is nothing but by Virtue of one Proposition laid down as true, to draw in another as true, i. e. to fee or suppose such a Connection of the two Ideas of the inferred Proposition. v. g. Let this be the Proposition laid down, Men shall be punished in another World, and from thence be inferred this other, Then Men can determine themselves. The Question now is to know, whether the Mind has made this Inference right, or no; if it has made it, by finding out the intermediate Ideas, and taken a View of the Connection of them, placed in a due Order, it has proceeded rationally, and made a right Inference. If it has done it without fuch a View, it has not fo much made an Inference that will hold, or an Inference of right Reason, as shewn a Willingness to have it be, or be taken for fuch. But in either Case is it Syllogism that discovered those *Ideas*, or shewed the Connection of them, for they must be both found out, and the Connection every where perceived, before they can rationally be made use of in Syllogism; unless it can be said, that any Idea, without confidering what Connection it hath with the two other, whose Agreement should be shewn by it, will do well enough in the Syllogism, and may be taken at a venture for

the Medius Terminus, to prove any Conclusion. But this no Body will fay, because it is by Virtue of the perceived Agreement of the intermediate Idea with the Extreams, that the Extreams are concluded to agree; and therefore each intermediate Idea must be such, as in the whole Chain hath a visible Connection with those two it is placed between, or else thereby the Conclusion cannot be inferred or drawn in; for where-ever any Link of the Chain is loofe, and without Connection, there the whole Strength of it is loft, and it hath no Force to infer or draw in any thing. In the Inflance above-mentioned, what is it shews the Force of the Inference, and confequently the Reafonableness of it, but a View of the Connection of all the intermediate Ideas that draw in the Conclusion or Proposition inferred; v. g. Men shall be punished — God the Punisher, — just Punishment, — the Punished guilty, — could have done otherwise, - Freedom, - Self-determination: by which Chain of Ideas thus visibly linked together in Train, i. e. each intermediate Idea agreeing on each fide with those two it is immediately placed between, the Ideas of Men and Self-determination appear to be connected, i. e. this Proposition, Men can determine themselves, is drawn in, or inferred from this, that they shall be punished in the other World. For here the Mind feeing the Connection there is between the Idea of Mens Punishment in the other World, and the Idea of God punishing; between God punishing, and the Justice of the Punishment; between Justice of Punishment and Guilt: between Guilt and a Power to do otherwise; between a Power to do otherwise and Freedom, and between Freedom and Self-determination, sees the Connection between Men and Self-determination.

Now, I ask, whether the Connection of the Extreams be not more clearly feen in this fimple and natural Disposition, than in the perplexed Repetitions, and Jumble of five or fix Syllogisms? I must beg Pardon of calling it Jumble, till some Body shall put these Ideas into so many Syllogisms, and then say, that they are less jumbled, and their Connection more visible, when they are transposed and repeated, and spun out to a greater Length in artificial Forms, than in that short natural plain Order they are laid down in here, wherein every one may see it, and wherein they must be seen, before they can be put into a Train of Syllogisms. For the natural Order of the connecting Ideas must direct the Order of the Syllogisms, and a Man must

fee the Connection of each intermediate Idea with those that it connects, before he can with Reason make use of it in a Syllogism. And when all those Syllogisms are made, neither those that are, nor those that are not Logicians, will fee the Force of the Argumentation, i. e. the Connection of the Extreams one jot the better. [For those that are not Men of Art, not knowing the true Forms of Syllogism, nor the Reasons of them, cannot know whether they are made in right and conclusive Modes and Figures or no, and so are not at all helped by the Forms they are put into, though by them the natural Order, wherein the Mind could judge of their respective Connection, being disturbed, renders the Illation much more uncertain than without them. And as for Logicians themselves, they see the Connection of each intermediate Idea with those it stands between, (on which the Force of the Inference depends,) as well before as after the Syllogism is made, or else they do not see it at all. For a Syllogism neither shews nor strengthens the Connection of any two Ideas immediately put together, but only by the Connection feen in them shews what Connection the Extreams have one with another. But what Connection the Intermediate has with either of the Extreams in that Syllogifm, that no Syllogism does or can shew. That the Mind only doth, or can perceive as they stand there in that fuxta-position only by its own View, to which the Syllogistical Form it happens to be in gives no Help or Light at all; it only shews, that if the intermediate Idea agrees with those it is on both fides immediately applied to, then those two remote ones, or as they are called Extreams, do certainly agree; and therefore the immediate Connection of each *Idea* to that which it is applied to on each fide, on which the Force of the Reaforing depends, is as well feen before as after the Syllogifm is made, or else he that makes the Syllogifm could never see it at all. This, as has been already observed, is seen only by the Eye, or the perceptive Faculty of the Mind, taking a view of them laid together, in a Juxta-position, which View of any two it has equally, whenever they are laid together in any Proposition, whether that Proposition be placed as a Major, or a Minor, in a Syllogifm, or no.

Of what Use then are Syllogisms? I answer, Their chief and main Use is in the Schools, where Men are allowed without Shame to deny the Agreement of Ideas, that do manifestly agree; or out of the Schools to those, who from

thence have learned without Shame to deny the Connection of Ideas, which even to themselves is visible. But to an ingenuous Searcher after Truth, who has no other Aim but to find it, there is no need of any fuch Form to force the allowing of the Inference: The Truth and Reasonableness of it is better feen in ranging of the Ideas in a fimple and plain Order. And hence it is, that Men in their own Enquiries after Truth, never use Syllogisms to convince themfelves, for in teaching others to instruct willing Learners.] Because before they can put them into a Syllogism, they must fee the Connection that is between the intermediate Idea, and the two other Ideas it is fet between, and applied to, to. flew their Agreement; and when they fee that, they fee whether the Inference be good or no, and so Syllogism comes too late to fettle it. For to make use again of the former Instance, I ask whether the Mind, considering the Idea of Justice, placed as an intermediate Idea between the Punishment of Men, and the Guilt of the punished, (and, till it does so consider it, the Mind cannot make use of it as a medius terminus) does not as plainly see the Force and Strength of the Inference, as when it is formed into Syllogism? To shew it in a very plain and easy Example; let Animal be the intermediate Idea, or medius terminus, that the Mind makes use of to shew the Connection of Homo and Vivens; I ask whether the Mind does not more readily and plainly see that Connection in the simple and proper Position of the connecting Idea in the Middle; thus,

Home ____ Animal ____ Vivens;

Than in this perplexed one,

Animal-Vivens-Home-Animal.

Which is the Position these *Ideas* have in a Syllogism, to shew the Connection between *Homo* and *Vivens* by the Intervention of *Animal*,

Indeed Syllogism is thought to be of necessary Use, even to the Lovers of Truth, to shew them the Fallacies that are often conceal'd in florid, witty or involved Discourses. But that this is a Mistake, will appear, if we consider that the Reason why sometimes Men, who sincerely aim at Truth are imposed upon by such loose, and as they are called,

 U_4

Rhetorical Discourses, is, that their Fancies being struck with some lively metaphorical Representations, they neglect to observe, or do not easily perceive what are the true Ideas upon which the Inference depends. Now, to shew such Men the Weakness of such an Argumentation, there needs no more but to strip it of the superfluous Ideas, which, blended and consounded with those on which the Inference depends, seem to shew a Connection where there is none, or at least do hinder the Discovery of the want of it; and then to lay the naked Ideas on which the Force of the Argumentation depends, in their due Order, in which Position the Mind taking a View of them, sees what Connection they have, and so is able to judge of the Inference, without any

need of a Syllogism at all.

I grant that Mode and Figure are commonly made use of in fuch Cases, as if the Detection of the Incoherence of such loose Discourses were wholly owing to the Syllogistical Form; and fo I my felf formerly thought, till upon a stricter Examination, I now find that laying the intermediate Ideas naked in their due Order, shews the Incoherence of the Argumentation better than Syllogism; not only as subjecting each Link of the Chain to the immediate View of the Mind in its proper place, whereby its Connection is best observ'd; but also because Syllogism shews the Incoherence only to those (who are not one of Ten Thousand) who perfectly understand Mode and Figure, and the Reason upon which those Forms are established; whereas a due and orderly placing of the Ideas, upon which the Inference is made, makes every one, whether Logician or not Logician, who understands the Terms, and hath the Faculty to perceive the Agreement or Difagreement of fuch Ideas, (without which, in or out of Syllogism, he cannot perceive the Strength or Weakness, Coherence or Incoherence of the Discourse) see the Want of Connection in the Argumentation, and the Abfurdity of the Inference.

And thus I have known a Man unskilful in Syllogifm, who at first hearing could perceive the Weakness and Inconclusiveness of a long artificial and plausible Discourse, wherewith others better skilled in Syllogism have been mislead; and I believe there are few of my Readers who do not know such. And indeed, if it were not so, the Debates of most Princes Councils, and the Business of Assemblies, would be in danger to be mismanaged, since those who are relied up-

on, and have usually a great Stroke in them, are not always fuch, who have the good Luck to be perfectly knowing in the Forms of Syllogism, or expert in Mode and Figure. And if Syllogism were the only, or so much as the surest way to detect the Fallacies of artificial Discourses, I do not think that all Mankind, even Princes in Matters that concern their Crowns and Dignities, are fo much in Love with Falshood and Mistake, that they would every where have neglected to bring Syllogism into the Debates of Moment, or thought it ridiculous fo much as to offer them in Affairs of Confequence; a plain Evidence to me, that Men of Parts and Penetration, who were not idly to dispute at their Ease, but were to act according to the Refult of their Debates, and often pay for their Miftakes with their Heads and Fortunes, found those Scholastick Forms were of little Use to discover Truth or Fallacy, whilst both the one and the other might be shewn, and better shewn without them, to those, who would not refuse to see, what was visibly shewn them.

Secondly, Another Reason that makes me doubt whether Syllogism be the only proper Instrument of Reason in the Discovery of Truth, is, that of whatever use Mode and Figure is pretended to be in the laying open of Fallacy, (which has been above confidered) those Scholastick Forms of Discourse are not less liable to Fallacies, than the plainer Ways of Argumentation; and for this I appeal to common Observation, which has always found these artificial Methods of Reasoning more adapted to catch and entangle the Mind, than to instruct and inform the Understanding. And hence it is, that Men even when they are baffled and filenced in this Scholastick Way, are seldom or never convinced, and so brought over to the conquering Side; they perhaps acknowledge their Adversary to be the more skilful Disputant, but rest nevertheless persuaded of the Truth on their Side; and go away, worsted as they are, with the same Opinion they brought with them, which they could not do, if this Way of Argumentation carried Light and Conviction with it, and made Men see where the Truth lay; and therefore Syllogism has been thought more proper for the attaining Victory in Dispute, than for the Discovery or Confirmation of Truth in fair Énquiries: And if it be certain, that Fallacy can be couched in Syllogisms, as it cannot be denied, it must be fomething elfe, and not Syllogism, that must discover them.

I have had Experience how ready some Men are, when all the Use which they have been wont to ascribe to any Thing is not allowed, to cry out, that I am for laying it wholly afide. But to prevent fuch unjust and groundless Imputations, I tell them, that I am not for taking away any Helps to the Understanding, in the Attainment of Knowledge. And if Men skilled in, and used to Syllogisms, find them affiffing to their Reason in the Discovery of Truth, I think they ought to make Use of them. All that I aim at is, that they should not ascribe more to these Forms, than belongs to them; and think, that Men have no Use, or not so full a Use of their Reasoning Faculty, without them. Some Eyes want Spectacles to fee Things clearly and diffinctly; but let not those that use them therefore say no Body can see clearly without them: Those who do so will be thought in Favour with Art (which perhaps they are beholden to) a little too much to depress and discredit Nature. Reason, by its own Penetration, where it is ftrong and exercised, usually sees quicker and clearer without Syllogism. If use of those Spectacles has fo dimm'd its Sight, that it cannot without them fee Confequences or Inconfequences in Argumentation, I am not fo unreasonable as to be against the using them. Every one knows what best fits his own Sight: but let him not thence conclude all in the Dark, who use not just the fame Helps that he finds a need of.

Helps little
in Demonstration, less in
Probability.

§. 5. But however it be in Knowledge, I think I may truly fay, it is of far lefs, or no Use at all in Probabilities. For the Affent there being to be determined by the Preponderancy, after a due weighing of all the Proofs, with

all Circumftances on both fides, nothing is fo unfit to affift the Mind in that, as Syllogism; which running away with one affumed Probability, or one topical Argument, pursues that till he has led the Mind quite out of Sight of the Thing under Confideration; and forcing it upon some remote Difficulty, hold it saft there intangled, perhaps, and as it were manacled in the Chain of Syllogisms, without allowing it the Liberty, much less affording it the Helps requisite to shew on which Side, all Things considered, is the greater Probability.

§. 6. But let it help us (as perhaps may be faid) in convincing Men of their Errors and Mistakes: (and yet I would fain fee the Man that was forced out of his Opinion by Dint of Syllogism) yet still it fails our Reason in that Part, which, if not its highest Persection, is yet certainly its hardest Task, and that which we most need its Help in; and that is, the sinding

Serves not to increase our Kuowledge, but sence with it.

most need its Help in; and that is, the finding out of Proofs, and making new Discoveries. The Rules of Syllogism serve not to furnish the Mind with those intermediate Ideas that may shew the Connection of remote ones. This Way of Reasoning discovers no new Proofs, but is the Art of marfhalling and ranging the old ones we have already. The 47th Proposition of the first Book of Euclid, is very true; but the Discovery of it, I think, not owing to any Rules of common Logick. A Man knows first, and then he is able to prove fyllogistically: So that Syllogism comes after Knowledge, and then a Man has little or no need of it. But 'tis chiefly by the finding out those *Ideas* that shew the Connection of diffant ones, that our Stock of Knowledge is increased, and that useful Arts and Sciences are advanced. Syllogifm, at best, is but the Art of sencing with the little Knowledge we have, without making any Addition to it. And if a Man should employ his Reason all this Way, he will not do much otherwise than he, who having got some Iron out of the Bowels of the Earth, should have it beaten up all into Swords, and put into his Servants Hands to fence with, and bang one another. Had the King of Spain employed the Hands of his People, and his Spanish Iron so, he had brought to light but little of that Treasure that lay so long hid in the dark Entrails of America. And I am apt to think, that he who should employ all the Force of his Reason only in brandishing of Syllogisms, will discover very little of that Mass of Knowledge which lies yet concealed in the secret Recesses of Nature; and which, I am apt to think, native ruftick Reason (as it formerly has done) is likelier to open a Way to, and add to the common Stock of Mankind, rather than any Scholastick Proceeding by the strict Rules of Mode and Figure.

§. 7. I doubt not, nevertheless, but there are Ways to be found to affish our Reason in this most useful Part; and this the judicious Hooker encourages me to say, who in his Eccl.

Other Helps should be sought. Pol. 1. 1. §. 6. speaks thus: If there might be added the right Helps of true Art and Learning, (which Helps I must plainly confess, this Age of the World carrying the Name of a learned Age, doth neither much know, nor generally regard) there would undoubtedly be almost as much Difference in Maturity of Judgment between Men therewith inur'd, and that which now Men are, as between Men that are now, and Innocents. I do not pretend to have found or discovered here any of Those right Helps of Art this great Man of deep Thought mentions; but this is plain, that Syllogism, and the Logick now in Use, which were as well known in his Days, can be none of those he means. It is sufficient for me, if by a Discourse perhaps something out of the Way, I am fure as to me wholly new and unborrowed, I shall have given an Occasion to others to cast about for new Discoveries, and to feek in their own Thoughts for those right Helps of Art which will scarce be found, I fear, by those who fervilely confine themselves to the Rules and Dictates of others. For beaten Facts lead these fort of Cattle (as an observing Roman calls them) whose Thoughts reach only to Imitation, non quo eundem est, sed quo itur. But I can be bold to say, that this Age is adorned with some Men of that Strength of Judgment, and Largeness of Comprehension, that if they would employ their Thoughts on this Subject, could open new and undifcovered Ways to the Advancement of Knowledge.

We reason about Particulars.

S. 8. Having here had an Occasion to speak of Syllogism in general, and the Use of it in Reasoning, and the Improvement of our Knowledge, 'tis fit, before I leave this Subject, to

take Notice of one manifest Mistake in the Rules of Syllogism; viz. That no Syllogistical Reasoning can be right and conclusive, but what has, at least, one general Proposition in it. As if we could not Reason, and have Knowledge about Particulars. Whereas, in truth, the Matter rightly considered, the immediate Object of all our Reasoning and Knowledge is nothing but Particulars. Every Man's Reasoning and Knowledge is only but the Ideas existing in his own Mind, which are truly every one of them particular Existences; and our Knowledge and Reasoning about other Things, is only as they correspond with those our particular Ideas. So that the Perception of the Agreement or Disagreement of our particular Ideas, is the whole and utmost of all our Knowledge. Universality is but

but accidental to it, and confifts only in this, That the particular Ideas about which it is, are fuch, as more than one particular Thing can correspond with, and be represented by. But the Perception of the Agreement or Disagreement of any two Ideas, and confequently our Knowledge, is equally clear and certain, whether either, or both, or neither of those Ideas be capable of representing more real Beings than one, or no. One thing more I crave leave to offer about Syllogism before I leave it, viz. May one not upon just Ground enquire whether the Form Syllogism now has, is that which in reason it ought to have? For the Medius Terminus being to join the Extremes, i. e. the intermediate Ideas by its Intervention, to shew the Agreement or Disagreement of the two in Question, would not the Position of the Medius Terminus be more natural, and shew the Agreement or Difagreement of the Extremes clearer and better, if it were placed in the Middle between them; which might be eafily done by transposing the Propositions, and making the Medius Terminus the Predicate of the first, and the Subject of the Second. As thus,

> Omnis Homo est Animal, Omne Animal est vivens, Ergo omnis Homo est vivens.

Omne Corpus est extensum & solidum, Nullum extensum & solidum est pura extensio, Ergo Corpus non est pura extensio.

I need not trouble my Reader with Instances in Syllogisms, whose Conclusions are particular. The same Reason holds for the same Form in them, as well as in the general.

§. 9. Reafon, though it penetrates into the Depths of the Sea and Earth, elevates our Thoughts as high as the Stars, and leads us thro' the vaft Spaces, and large Rooms of this mighty Fabrick, yet it comes far fhort of the real Extent of even corporeal Being; and there are many Inflances wherein it fails us: As,

First, It perfectly fails us, where our Ideas fail. It neither does, nor can extend it self farther than they do. And therefore where-ever we have no Ideas, our Reasoning stops, and we are at an End of our Reckoning: And if at any time

The Word was god.
The More was god.
The More was grove a pro-

we reason about Words, which do not stand for any Ideas, 'tis

only about those Sounds, and nothing else.

§. 10. Secondly, Our Reason is often puzled, and at a Loss, because of the Obscurity, Confusion or Impersection of the Ideas it is 2dly. Because of obscure and imperfect employed about; and there we are involved in Ideas. Difficulties and Contradictions. Thus, not having any perfect Idea of the least Extension

of Matter, nor of Infinity, we are at a Loss about the Divisibility of Matter; but having perfect, clear and distinct Ideas of Number, our Reason meets with none of those inextricable Difficulties in Numbers, nor finds it felf involved in any Contradictions about them. Thus we having but imperfect Ideas of the Operations of our Minds, and of the Beginning of Motion or Thought, how the Mind produces either of them in us, and much imperfecter yet, of the Operation of GOD, run into great Difficulties about free created Agents, which Reason cannot well extricate it self out of.

\$. 11. Thirdly, Our Reason is often at a stand, because it perceives not those Ideas, Thirdly, For want of which could serve to shew the certain or probable Agreement or Disagreement of any two intermediate Ideas. other Ideas: And in this fome Mens Faculties far out-go others. Till Algebra, that great Instrument and Instance of human Sagacity, was dif-

covered, Men, with Amazement looked on feveral of the Demonstrations of ancient Mathematicians, and could scarce forbear to think the finding feveral of those Proofs to be fomething more than human.

§. 12. Fourthly, The Mind by proceeding upon false Principles, is often engag'd in Absur-Fourthly. dities and Difficulties, brought into Straits Because of wrong Prinand Contradictions, without knowing how to ciples. free it felf: And in that Case it is in vain to implore the Help of Reason, unless it be to discover the Falshood, and reject the Influence of those

wrong Principles. Reason is so far from clearing the Difficulties which the Building upon false Foundations bring a Man into, that if he will purfue it, it entangles him the more, and engages him deeper in Perplexities. .

§. 13. Fifthly, As obscure and impersect Ideas often involve our Reason, so upon the same Ground, do dubious Words, and uncertain Signs, often in Discourses and Arguings, when not warily attended to, puzzle Mens Reason, and bring them to a Non-plus: But these two latter are our Fault, and not the Fault of Reason. But yet the Consequences of them are nevertheless obvious; and the Perplexities or Errors they fill Mens Minds with, are every where observable.

§. 14. Some of the *Ideas* that are in the Mind, are so there, that they can be by themselves immediately compared one with another: And in these the Mind is able to perceive, that they agree, or disagree, as clearly as that it has them. Thus the Mind perceives, that an Arch of a Circle, is less than the whole Circle, as clearly as it does the *Idea* of a Circle.

Our highest Degree of Knowledge, is intuitive, without Reasoning.

cle: And this therefore, as has been faid, I call intuitive Knowledge, which is certain, beyond all Doubt, and needs no Probation, nor can have any; this being the highest of all human Certainty. In this confifts the Evidence of all those Maxims which no Body has any Doubt about, but every Man (does not, as is faid, only affent to, but) knows to be true, as foon as ever they are proposed to his Understanding. In the Discovery of, and Assent to these Truths, there is no Use of the discursive Faculty, no need of Reasoning, but they are known by a superior, and higher Degree of Evidence. And fuch, if I may guess at Things unknown, I am apt to think, that Angels have now, and the Spirits of just Men made perfect, shall have, in a future State, of Thoufands of Things, which now either wholly escape our Apprehenfions, or which our fhort-fighted Reason having got fome faint Glimpse of, we, in the dark, grope after.

§. 15. But though we have here and there a little of this clear Light, fome Sparks of bright Knowledge; yet the greatest Part of our *Ideas* are such, that we cannot discern their Agreement or Disagreement, by an immediate

The next is Demonstration by Reasoning.

comparing them. And in all these we have Need of Reasoning, and must, by Discourse and Inscrence, make our Discoveries. Now, of these there are two forts, which I shall take the Liberty to mention here again:

 $Fi\gamma 7,$

First, Those whose Agreement or Disagreement, though it cannot be feen by an immediate putting them together, vet may be examined by the Intervention of other Ideas. which can be compared with them. In this Case, when the Agreement or Disagreement of the intermediate Idea, on both fides with those which we would compare, is plainly discerned, there it amounts to Demonstration, whereby Knowledge is produced, which though it be certain, yet it is not so easy, nor altogether so clear, as intuitive Knowledge: because in that there is barely one simple Intuition, wherein there is no room for any the least Mistake or Doubt; the Truth is feen all perfectly at once. In Demonstration, 't's true, there is Intuition too, but not altogether at once; for there must be a Remembrance of the Intuition of the Agreement of the Medium, or intermediate Idea, with that we compared it with before, when we compare it with the other; and where there be many Mediums, there the Danger of the Mistake is the greater. For each Agreement or Disagreement of the Ideas must be observed and seen in each Step of the whole Train, and retained in the Memory, just as it is, and the Mind must be sure that no part of what is neceffary to make up the Demonstration, is omitted or over-look-This makes fome Demonstrations long and perplexed, and too hard for those who have not Strength of Parts distinctly to perceive, and exactly carry fo many Particulars orderly in their Heads. And even those, who are able to master such intricate Speculations, are fain fometimes to go over them again, and there is need of more than one Review before they can arrive at Certainty. But yet where the Mind clearly retains the Intuition it had of the Agreement of any Idea with another, and that with a third, and that with a fourth, &c. there the Agreement of the first and the fourth is a Demonstration, and produces certain Knowledge, which may be called rational Knowledge, as the other is Intuitive.

To supply the Narrowness of this, we have nothing but Judement upon probable Reasoning.

§. 16. Secondly, There are other Ideas, whose Agreement or Disagreement can no otherwise be judged of, but by the Intervention of others, which have not a certain Agreement with the Extremes, but an usual or likely one: And in these it is, that the Judgment is properly exercised, which is the acquiescing of the Mind, that any Ideas do agree, by comparing them with such probable Mediums. This, though

though it never amounts to Knowledge, no, not to that which is the lowest Degree of it; yet sometimes the intermediate Ideas tye the Extremes fo firmly together, and the Probability is so clear and strong, that Assent as necessarily follows it. as Knowledge does Demonstration. The great Excellency and Use of the Judgment is to observe right, and take a true Estimate of the Force and Weight of each Probability: and then casting them up all right together, chuse that side which has the Over-balance.

§. 17. Intuitive Knowledge is the Perception Intuition. of the certain Agreement or Disagreement Demonstratiof two Ideas, immediately compared togeon, Judgment. ther.

Rational Knowledge is the Perception of the certain Agreement or Disagreement of any two Ideas, by the Intervention

of one or more other *Ideas*.

Judgment is the thinking or taking two Ideas to agree or disagree by the Intervention of one or more Ideas, whose certain Agreement or Disagreement with them it does not perceive, but hath observed to be frequent and usual.

§. 18. Though the deducing one Proposition from another, or making Inferences in Words, Consequences be a great part of Reason, and that which it of Words, and is usually employed about; yet the principal Consequences of Ideas. Act of Ratiocination is the finding the Agreement or Disagreement of two Ideas one with another, by the Intervention of a third. As a Man, by a Yard, finds two Houses to be the same Length, which could not be brought together to measure their Equality by juxtaposition. Words have their Consequences, as the Signs of

fuch Ideas: And Things agree or difagree, as really they are; but we observe it only by our *Ideas*.

§. 19. Before we quit this Subject, it may be worth our while a little to reflect on four Sorts of Arguments, that Men in their Reasonings with others do ordinarily make use of, to prevail on their Assent; or at least so to awe them, as to filence their Opposition.

Four Sorts of Arguments. First, Ad Verecundiam.

First, The first is, to alledge the Opinions of Men, whose Parts, Learning, Eminency, Power or some other Cause, has gained a Name, and fettled their Reputation in the common Esteem with some kind of Authority. When Men are established in any kind of Dignity, 'tis thought a Breach of

Vol. II. Modesty Modesty for others to derogate any way from it, and question the Authority of Men, who are in possession of it. This is apt to be censur'd, as carrying with it too much of Pride, when a Man does not readily yield to the Determination of approv'd Authors, which is wont to be received with Respect and Submission by others; and 'tis look'd upon as Insolence for a Man to set up, and adhere to his own Opinion, against the current Stream of Antiquity, or to put it in the Balance against that of some learned Doctor, or otherwise approved Writer. Whoever backs his Tenets with such Authorities, thinks he ought thereby to carry the Cause, and is ready to stile it Impudence in any one who shall stand out against them. This I think may be called Argumentum ad Verecundiam.

\$. 20. Secondly, Another way that Men ordinarily use to drive others, and force them to fubmit their Judgments, and receive the Opinion in Debate, is to require the Adversary to admit what they alledge as a Proof, or to assign a better. And this I call Argumentum ad Ignorantiam.

uns i can myumentum uu ignoru Thirdh

§. 21. Thirdly, A third way is to press a Man with Consequences drawn from his own Principles or Concessions. This is already known under the Name of Argumentum ad Hominem.

Fourthly, Ad Judicium.

Thirdly, Ad Hominem.

§. 22. Fourthly, The fourth is the using of Proofs drawn from any of the Foundations of Knowledge or Probability. This I call Argumentum ad Judicium. This alone of all the

four brings true Instruction with it, and advances us in our way to Knowledge. For, 1. It argues not another Man's Opinion to be right, because I out of Respect, or any other Consideration, but that of Conviction, will not contradict him. 2. It proves not another Man to be in the right way, nor that I ought to take the same with him, because I know not a better. 3. Nor does it follow, that another Man is in the right way, because he has shewn me that I am in the wrong. I may be modest, and therefore not oppose another Man's Persuasion; I may be ignorant, and not be able to produce a better; I may be in an Error, and another may shew me that I am so. This may dispose me perhaps for the Reception of Truth, but helps me not to it; that must come from Proofs and Arguments, and Light arising from the Nature of Things themselves, and not from my Shamesacedness, Ignorance, or Error.

§. 23. By what has been before faid of Reafon, we may be able to make some Guess at the Distinction of Things, into those that are according to, above, and contrary to Reason. 1. According to Reason are such Propositions,

Above, contrary, and according 'to Reason.

whose Truth we can discover, by examining and tracing those Ideas we have from Sensation and Reflection; and by natural Deduction find to be true or probable. 2. Above Reason are such Propositions, whose Truth or Probability we cannot by Reason derive from those Principles. 3. Contrary to Reason are such Propositions, as are inconsistent with, or irreconcilable to our clear and distinct Ideas. Thus the Existence of one GOD, is according to Reason; the Existence of more than one GOD contrary to Reason; the Resurrection of the Dead, above Reason. Farther, as above Reason may be taken in a double Sense, viz. either as signifying above Probability, or above Certainty; so in that large Sense also, contrary to Reason, is, I suppose, sometimes taken.

§. 24. There is another Use of the Word Reason, wherein it is opposed to Faith; which, though it be in it self a very improper Way of speaking, yet common Use has so authorized

Reason and Faith not opposite.

it, that it would be Folly either to oppose or hope to remedy it; only I think it may not be amiss to take Notice, that however *Faith* be opposed to *Reason*, *Faith* is nothing but a firm Affent of the Mind: which if it be regulated, as is our Duty, cannot be afforded to any Thing, but upon good Reason, and so cannot be opposite to it. He that believes, without having any Reason for believing, may be in Love with his own Fancies; but neither feeks Truth as he ought, nor pays the Obedience due to his Maker, who would have him use those discerning Faculties he has given him, to keep him out of Mistake and Error. He that does not this to the best of his Power, however he sometimes lights on Truth, is in the right but by Chance; and I know not whether the Luckiness of the Accident will excuse the Irregularity of his Proceeding. This at least is certain, that he must be accountable for whatever Mistakes he runs into; whereas he that makes use of the Light and Faculties GOD has given him, and feeks fincerely to discover Truth by those Helps and Abilities he has, may have this Satisfaction in doing his Duty as a rational Creature, that though he should miss Truth, he will not miss the Reward of it: For he go-

中

verns his Affent right, and places it as he should, who in any Case or Matter whatsoever believes or disbelieves according as Reason directs him. He that does otherwise, transgresses against his own Light, and misuses those Faculties which were given him to no other End, but to search and follow the clearer Evidence, and greater Probability. But since Reason and Faith are by some Men opposed, we will so consider them in the following Chapter.

CHAP. XVIII.

Of Faith and Reason, and their distinct Provinces.

Nicessary to know their Boundaries. §. t. That been above flewn, 1. That we are of necessity ignorant, and want Knowledge of all Sorts, where we want *Ideas*. 2. That we are ignorant, and want rational Knowledge, where we want Proofs.

3. That we want general Knowledge and Certainty, as far as we want clear and determined specifick *Ideas*. 4. That we want Probability to direct our Assent in Matters where we have neither Knowledge of our own, nor Testimony of other

Men to bottom our Reason upon.

From these Things thus premised, I think we may come to lay down the Measures and Boundaries between Faith and Reason: the want thereof may possibly have been the Cause, if not of great Disorders, yet at least of great Disputes, and perhaps Mistakes in the World: For till it be resolved how far we are to be guided by Reason, and how far by Faith, we shall in vain dispute, and endeavour to convince one another in Matters of Religion.

Faith and Reason what, as contradistinguished. §. 2. I find every Sect, as far as Reason will help them, make use of it gladly; and where it fails them, they cry out, 'Tis Matter of Faith, and above Reason. And I do not see how they can argue with any one, or ever convince a

Gainfayer, who makes use of the same Plea, without setting down strict Boundaries between Faith and Reason, which ought to be the first Point established in all Questions, where Faith has any thing to do.

Reason

Reason therefore here, as contradiftinguished to Faith, I take to be the Discovery of the Certainty or Probability of such Propositions or Truths, which the Mind arrives at by Deduction made from such Ideas which it has got by the Use of its natural Faculties, viz. by Sensation or Resection.

Faith, on the other Side, is the Affent to any Proposition, not thus made out by the Deductions of Reason, but upon the Credit of the Proposer, as coming from GOD, in some extraordinary way of Communication. This way of discovering

Truths to Men, we call Revelation.

§. 3. First, then, I say, that no Man inspired by GOD, can by any Revelation communicate to others any new simple Ideas, which they had not before from Sensation or Resection: For whatsoever Impressions he himself may have from the immediate Hand of GOD, this Revelation, if it be of new simple Ideas, cannot be

No new simple Idea can be co veyed by traditional Revelation.

conveyed to another, either by Words, or any other Signs; because Words, by their immediate Operation on us, cause no other *Ideas* but of their natural Sounds; and 'tis by the Custom of using them for Signs, that they excite and revive in our Minds latent *Ideas*: but yet only such *Ideas* as were there before. For Words seen or heard recal to our Thoughts those *Ideas* only, which to us they have been wont to be Signs of; but cannot introduce any perfectly new, and formerly unknown simple *Ideas*. The same holds in all other Signs, which cannot signify to us Things of which we have before never had any *Idea* at all.

Thus whatever Things were discovered to St. Paul when he was rapped up into the Third Heaven, whatever new Ideas his Mind there received, all the Description he can make to others of that Place, is only this, that there are such Things as Eye bath not seen, nor Ear beard, nor bath it entred into the Heart of Man to conceive. And supposing GOD should discover to any one, supernaturally, a Species of Creatures inhabiting, for example, Jupiter or Saturn, (for that it is possible there may be such, no Body can deny) which had hix Senses; and imprint on his Mind the Ideas conveyed to theirs by that fixth Sense, he could no more, by Words, produce in the Minds of other Men those Ideas, imprinted by that fixth Sense, than one of us could convey the Idea of any Colour by the Sounds of Words into a Man, who having the other four Senses perfect, had always totally wanted the fifth

 X_3

of Seeing. For our fimple *Ideas* then, which are the Foundation and fole Matter of all our Notions and Knowledge, we must depend wholly on our Reason, I mean, our natural Faculties, and can by no means receive them, or any of them, from *traditional Revelation*; I say, *traditional Revelation*, in distinction to *original Revelation*. By the one, I mean that first Impression which is made immediately by GOD, on the Mind of any Man, to which we cannot set any Bounds; and by the other, those Impressions delivered over to others in Words, and the ordinary ways of conveying our Conceptions one to another.

Traditional
Revelation
may make us
know Propositions knowable also by
Reason, but
not with the
same Certainty that Reason doth.

§. 4. Secondly, I fay, that the fame Truths may be discovered, and conveyed down from Revelation, which are discoverable to us by Reason, and by those Ideas we naturally may have. So GOD might, by Revelation, discover the Truth of any Proposition in Euclid; as well as Men, by the natural Use of their Faculties, come to make the Discovery themselves. In all Things of this kind, there is little Need or Use of Revelation, GOD having furnished us with natural, and surer Means to arrive at the Know-

For whatfoever Truth we come to the clear ledge of them. Discovery of, from the Knowledge and Contemplation of our own Ideas, will always be certainer to us, than those which are conveyed to us by traditional Revelation: For the Knowledge we have that this Revelation came at first from GOD, can never be so fure as the Knowledge we have from the clear and distinct Perception of the Agreement or Disagreement of our own Ideas. v. g. If it were revealed some Ages since, that the three Angles of a Triangle were equal to two right ones, I might affent to the Truth of that Proposition, upon the Credit of the Tradition, that it was revealed: But that would never amount to fo great a Certainty as the Knowledge of it, upon the comparing and measuring my own Ideas of two right Angles, and the three Angles of a Triangle. The like holds in Matter of Fact, knowable by our Senses; v. g. the History of the Deluge is conveyed to us by Writings, which had their Original from Revelation; and yet no Body, I think, will fay he has as certain and clear a Knowledge of the Flood, as Noah that faw it; or that he himself would have had, had he then been alive, and feen it. For he has no greater an Assurance than

that of his Senses, that it is writ in the Book suppos'd writ by Moses inspired; but he has not so great an Assurance that Moses writ that Book, as if he had seen Moses write it. So that the Assurance of its being a Revelation, is less still than the Assurance of his Senses.

§. 5. In Propositions then, whose Certainty is built upon the clear Perception of the Agreement or Disagreement of our Ideas attain'd either by immediate Intuition, as in self-evident Propositions, or by evident Deductions of Reason in Demonstrations, we need not the Assistance of Revelation, as necessary to gain our Assent, and introduce them into our Minds;

Revelation cannot be admitted against the clear Evidence of Reafon.

because the natural ways of Knowledge could settle them there, or had done it already, which is the greatest Assurance we can possibly have of any thing, unless where GOD immediately reveals it to us: and there too our Assurance can be no greater than our Knowledge is, that it is a Revelation from GOD. But yet nothing I think can, under that Title, shake or over-rule plain Knowledge, or rationally prevail with any Man to admit it for true, in a direct Contradiction to the clear Evidence of his own Understanding: For fince no Evidence of our Faculties by which we receive such Revelations, can exceed, if equal, the Certainty of our intuitive Knowledge, we can never receive for a Truth any Thing that is directly contrary to our clear and diffinct Knowledge, v. g. the *Ideas* of one Body and one Place, do so clearly agree, and the Mind has so evident a Perception of their Agreement, that we can never affent to a Proposition, that affirms the same Body to be in two diffant Places at once, however it should pretend to the Authority of a divine Revelation: fince the Evidence. First, That we deceive not our felves in ascribing it to GOD; Secondly, That we understand it right; can never be so great, as the Evidence of our own intuitive Knowledge, whereby we difcern it impossible for the same Body to be in two Places at once. And therefore no Proposition can be received for divine Revelation, or obtain the Affent due to all fuch, if it be contradictory to our clear intuitive Knowledge. cause this would be to subvert the Principles and Foundations of all Knowledge, Evidence, and Assent whatsoever: And there would be left no Difference between Truth and Falshood, no Measures of Credible and Incredible in the World, if doubtful Propositions shall take Place before self-X д

evident; and what we certainly know, give way to what we may possibly be mistaken in. In Propositions therefore contrary to the clear Perception of the Agreement or Difagreement of any of our Ideas, 'twill be in vain to urge them as Matters of Faith. They cannot move our Affent, under that or any other Title whatfoever: For Faith can never convince us of any Thing, that contradicts our Knowledge; because, though Faith be founded on the Testimony of GOD, (who cannot lye) revealing any Proposition to us; yet we cannot have an Affurance of the Truth of its being a divine Revelation, greater than our own Knowledge: fince the whole Strength of the Certainty depends upon our Knowledge, that GOD revealed it; which in this Case, where the Proposition fupposed revealed contradicts our Knowledge or Reason, will always have this Objection hanging to it, (viz.) that we cannot tell how to conceive that to come from GOD, the bountiful Author of our Being, which, if received for true, must overturn all the Principles and Foundations of Knowledge he has given us; render all our Faculties useless; wholly destroy the most excellent part of his Workmanship, our Understandings; and put a Man in a Condition, wherein he will have less Light, less Conduct, than the Beast that perisheth. For if the Mind of Man can never have a clearer (and perhaps not fo clear) Evidence of any Thing to be a divine Revelation, as it has of the Principles of its own Reason, it can never have a ground to quit the clear Evidence of its Reason, to give Place to a Proposition, whose Revelation has not a greater Evidence than those Principles have.

Traditional Revelation much less. §. 6. Thus far a Man has Use of Reason, and ought to hearken to it, even in immediate and original Revelation, where it is supposed to be made to himself: But to all those who pretend not to immediate *Revelation*, but are

required to pay Obedience, and to receive the Truths revealed to others, which, by the Tradition of Writings, or Word of Mouth, are conveyed down to them, Reason has a great deal more to do, and is that only which can induce us to receive them. For Matter of Faith being only divine Revelation, and nothing else; Faith, as we use the Word, (called commonly Divine Faith) has to do with no Propositions, but those which are supposed to be divinely revealed. So that I do not see how those, who make Revelation alone the sole Object

Object of Faith, can fay, that it is a Matter of Faith, and not of Reason, to believe, that such or such a Proposition, to be found in fuch or fuch a Book, is of Divine Inspiration; unless it be revealed, that that Proposition, or all in that Book, was communicated by Divine Inspiration. Without fuch a Revelation, the believing, or not believing that Propofition, or Book, to be of Divine Authority, can never be Matter of Faith, but Matter of Reason; and such, as I must come to an Assent to, only by the Use of my Reason, which can never require or enable me to believe that which is contrary to it self: It being impossible for Reason ever to procure any Assent to that, which to it self appears unreasonable.

In all Things therefore, where we have clear Evidence from our Ideas, and those Principles of Knowledge I have above-mentioned, Reason is the proper Judge; and Revelation, though it may in confenting with it confirm its Dictates, yet cannot in fuch Cases invalidate its Decrees: Nor can we be obliged, where we have the clear and evident Sentence of Reason, to quit it, for the contrary Opinion, under a Pretence that it is Matter of Faith; which can have no Authority against the plain and clear Dictates of Reason.

§. 7. But, Thirdly, There being many Things, wherein we have very imperfect No-Things above tions, or none at all; and other Things, of Reason,

whose past, present, or suture Existence, by the Natural Use of our Faculties, we can have no Knowledge at all; these, as being beyond the Discovery of our natural Faculties, and above Reason, are, when revealed, the proper Matter of Faith. Thus, that Part of the Angels rebelled against GOD, and thereby lost their first happy State; and that the Dead shall rife, and live again: These, and the like, being beyond the Discovery of Reason, are purely Matters of Faith; with which Reason has, directly, nothing to do.

§. 8. But fince GOD in giving us the Light of Reason has not thereby tied up his own Hands from affording us, when he thinks fit, the Light of Revelation in any of those Matters, wherein our natural Faculties are able to give a probable Determination; Revelation,

Or not contrary to Reason, if revealed, are Matter of Faith.

where God has been pleased to give it, must carry it against the probable Conjectures of Reason, because the Mind, not being certain of the Truth of that it does not evidently know. but only yielding to the Probability that appears in it, is bound to give up its Assent to such a Testimony; which, it is satisfied, comes from one who cannot err, and will not deceive. But yet it still belongs to Reason, to judge of the Truth of its being a Revelation, and of the Signification of the Words wherein it is delivered. Indeed, if any Thing shall be thought Revelation, which is contrary to the plain Principles of Reason, and the evident Knowledge the Mind has of its own clear and distinct Ideas, there Reason must be hearkened to, as to a Matter within its Province. Since a Man can never have so certain a Knowledge, that a Proposition, which contradicts the clear Principles and Evidence of his own Knowledge, was divinely revealed, or that he understands the Words rightly, wherein it is delivered, as he has, that the contrary is true; and so is bound to confider and judge of it as a Matter of Reason, and not swallow it, without Examination, as a Matter of Faith.

Revelation in Matters robere Reason cannot judge, or but probably, ought to be hearkened

§. 9. First, Whatever Proposition is revealed, of whose Truth our Mind, by its natural Faculties and Notions cannot judge, that is purely Matter of Faith, and above Reason.

Secondly, All Propositions, whereof the Mind, by the Use of its natural Faculties, can come to determine and judge, from naturally acquired *Ideas*, are *Matter of Reason*; with this Difference still, that in those concerning

which it has but an uncertain Evidence, and so is persuaded of their Truth, only upon probable Grounds, which still admit a Possibility of the contrary to be true, without doing Violence to the certain Evidence of its own Knowledge, and overturning the Principles of all Reason; in such probable Propositions, I say, an evident Revelation ought to determine our Assent even against Probability. For where the Principles of Reason have not evidenced a Proposition to be certainly true or false, there clear Revelation, as another Principle of Truth, and Ground of Assent, may determine; and so it may be Matter of Faith, and be also above Reason; because Reason, in that particular Matter being able to reach no higher than Probability, Faith gave the Determination where Reason came short; and Revelation discovered on which side the Truth lay.

§. 10. Thus far the Dominion of Faith reaches, and that without any Violence or Hindrance to Reason; which is not injured, or disturbed, but affished and improved, by new Discoveries of Truth, coming from the eternal Fountain of all Knowledge. Whatever God hath revealed, is certainly true; no Doubt can be made of it. This is the proper Object of

In Matters
where Reason
can afford
certain Knowledge, that is
to be hearkened to.

Faith: But whether it be a divine Revelation or no, Reafon must judge; which can never permit the Mind to reject a greater Evidence to embrace what is less evident, nor allow it to entertain Probability in Opposition to Knowledge and Certainty. There can be no Evidence, that any traditional Revelation is of divine Original, in the Words we receive it, and in the Sense we understand it, so clear, and so certain, as that of the Principles of Reason: And therefore, nothing that is contrary to, and inconfistent with clear and self-evident Dictates of Reason, has a right to be urged or assented to, as a Matter of Faith, wherein Reason hath nothing to do. Whatfoever is divine Revelation, ought to over-rule all our Opinions, Prejudices, and Interests, and hath a right to be received with full Affent: Such a Submiffion as this of our Reason to Faith, takes not away the Land-marks of Knowledge: This shakes not the Foundations of Reason, but leaves us that Use of our Faculties, for which they were given us.

§. 11. If the Provinces of Faith and Reafon are not kept distinct by these Boundaries, there will, in Matter of Religion, be no room for Reason at all; and those extravagant Opinions and Ceremonies, that are to be found in the several Religions of the World, will not deserve to be blamed. For, to this crying up of Faith, in Opposition to Reason, we may, I think, in good Measure, ascribe those Absurdities that fill almost all the Religions which possess and divide Mankind. For Men having

If the Boundaries be not fet between Faith and Rcason, no Enthusiasm, or Extravagancy in Religion, can be contradicted.

been principled with an Opinion, that they must not consult Reason in the Things of Religion, however apparently contradictory to common Sense, and the very Principles of all their Knowledge, have let loose their Fancies, and natural Superstition; and have been, by them, led into so strange Opinions, and extravagant Practices in Religion, that a considerate Man cannot but stand amazed at their Follies, and

udge

judge them so far from being acceptable to the great and wise GOD, that he cannot avoid thinking them ridiculous, and offensive to a sober good Man. So that, in effect, Religion, which should most distinguish us from Beasts, and ought most peculiarly to elevate us, as rational Creatures, above Brutes, is that wherein Men often appear most irrational, and more senseless than Beasts themselves. Gredo, quia impossibile est: I believe, because it is impossible, might, in a good Man, pass for a Sally of Zeal; but would prove a very ill Rule for Men to chuse their Opinions or Religion by.

CHAP. XIX.

Of Enthusiasm.

§. 1. H E that would feriously fet upon the Search of Truth, ought in the Love of Truth first Place to prepare his Mind with a Love necessary. of it: For he that loves it not, will not take much Pains to get it, nor be much concerned when he misses it. There is no Body in the Common-wealth of Learning, who does not profess himself a Lover of Truth: And there is not a rational Creature that would not take it amiss to be thought otherwise of. And yet for all this, one may truly fay, there are very few Lovers of Truth for Truth's Sake, even amongst those who persuade themselves that they How a Man may know whether he be so in earnest, is worth Enquiry: And I think there is this one unerring Mark of it, viz. The not entertaining any Proposition with greater Affurance, than the Proofs it is built upon will warrant. Whoever goes beyond this Measure of Assent, 'tis plain, receives not Truth in the Love of it; loves not Truth for Truth's Sake, but for fome other bye End. For the Evidence that any Proposition is true, (except such as are self-evident) lying only in the Proofs a Man has of it, whatfoever Degrees of Assent he affords it beyond the Degrees of that Evidence, 'tis plain all that Surplusage of Assurance is owing to fome other Affection, and not to the Love of Truth: It being as impossible, that the Love of Truth should carry my Assent above the Evidence, that there is to me, that it is true, as that the Love of Truth should make me Assent to any Proposition, for the Sake of that Evidence, which it has not, that it is true; which is, in effect, to love it as a Truth, because it is possible or probable that it may not be In any Truth that gets not possession of our Minds by the irrefistible Light of Self-evidence, or by the Force of Demonstration, the Arguments that gain it Affent, are the Vouchers and Gage of its Probability to us; and we can receive it for no other than fuch as they deliver it to our Understandings. Whatsoever Credit or Authority we give to any Proposition more than it receives from the Principles and Proofs it supports it felf upon, is owing to our Inclinations that way, and is so far a Derogation from the Love of Truth, as fuch: Which, as it can receive no Evidence from our Passions or Interests, so it should receive no Tincture from them.

§. 2. The affuming an Authority of dictating to others, and a Forwardness to prescribe A Forwardness to aistate. to their Opinions, is a constant Concomitant from whence. of this Byass and Corruption of our Judgments: For how almost can it be otherwise, but that he should be ready to impose on others Belief, who has already imposed on his own? Who can reasonably expect Arguments and Conviction from him, in dealing with others, whose Understanding is not accustomed to them in his dealing with himself? Who does Violence to his own Faculties, tyrannizes over his own Mind, and usurps the Prerogative that belongs to Truth alone, which is to command Affent by only its own Authority, i. e. by and in proportion to that

§. 3. Upon this Occasion I shall take the Liberty to consider a third Ground of Assent, Force of Enwhich, with some Men, has the same Authority, and is as considertly relied on as either Faith or Reason: I mean Enthusiasm. Which, laying by Reason, would set up Revelation without it. Whereby in Effect it takes away both Reason and Revelation, and substitutes in the room of it the ungrounded Fancies of a Man's own Brain, and assumes 'em for a Foundation both of Opinion and Conduct.

§. 4. Reason is natural Revelation, whereby the eternal Father of Light, and Fountain of all Knowledge, communicates to Mankind that

Evidence which it carries with it.

Reafon and Revelation. Portion of Truth which he has laid within the Reach of their natural Faculties. Revelation is natural Reason enlarged by a new Set of Discoveries communicated by GOD immediately, which Reason vouches the Truth of, by the Testimony and Proofs it gives, that they come from GOD. So that he that takes away Reason, to make Way for Revelation, puts out the Light of both, and does much what the same, as if he would persuade a Man to put out his Eyes, the better to receive the remote Light of an invisible Star by a Telescope.

\$. 5. Immediate Revelation being a much cafier way for Men to establish their Opinions, and regulate their Conduct, than the tedious and not always successful Labour of strict Rea-

foning, it is no wonder that fome have been very apt to pretend to Revelation, and to persuade themselves that they are under the peculiar Guidance of Heaven in their Actions and Opinions, especially in those of them which they cannot account for by the ordinary Methods of Knowledge, and Principles of Reason. Hence we see, that in all Ages, Men, in whom Melancholy has mixed with Devotion, or whose Conceit of themselves has raised them into an Opinion of a greater Familiarity with GOD, and a nearer Admittance to his Favour, than is afforded to others, have often flattered themselves with a Persuasion of an immediate Intercourse with the Deity, and frequent Communications from the Divine Spirit. GOD I own cannot be denied to be able to enlighten the Understanding by a Ray darted into the Mind immediately from the Fountain of Light. This they underfland he has promifed to do, and who then has fo good a Title to expect it, as those who are his peculiar People, chosen by him, and depending on him?

§. 6. Their Minds being thus prepared, whatever groundless Opinion comes to settle it self strongly upon their Fancies, is an Illumination from the Spirit of GOD, and presently of divine Authority: And whatsoever odd Action they find in themselves a strong Inclination to do, that Impulse is concluded to be a Call or Direction from Heaven, and must be obeyed; its a Commission from above, and they cannot err in execut-

ing it.

§. 7. This I take to be properly Enthusiasm, which, though founded neither on Reason nor divine Revelation, but rising from the Conceits of a warmed or over-weening Brain.

Brain, works yet, where it once gets footing, more powerfully on the Persuasions and Actions of Men, than either of those two, or both together: Men being most forwardly obedient to the Impulses they receive from themselves; and the whole Man is sure to act more vigorously, where the whole Man is carried by a natural Motion. For strong Conceit, like a new Principle, carries all easily with it, when got above common Sense, and freed from all Restraint of Reason, and Check of Reslection, it is heightened into a divine Authority, in concurrence with our own Temper and Inclination.

§. 8. Though the odd Opinions and extravagant Actions Enthusiasm has run Men into, were enough to warn them against this wrong Principle so apt to misguide them both in their Belief and Conduct; yet the Love of something extraordinary, the East and Glory it is to

Enthusiasm mistaken for Seeing and Feeling.

thing extraordinary, the Ease and Glory it is to be inspired, and be above the common and natural ways of Knowledge, fo flatters many Mens Laziness, Ignorance and Vanity, that when once they are got into this way of immediate Revelation, of Illumination without Search, and of Certainty without Proof, and without Examination, 'tis a hard Matter to get them out of it. Reason is lost upon them: they are above it: They see the Light insused into their Understandings, and cannot be mistaken; 'tis clear and visible there, like the Light of bright Sun-shine; shews it selfand needs no other Proof, but its own Evidence; they feel the Hand of GOD moving them within, and the Impulses of the Spirit, and cannot be mistaken in what they feel. Thus they support themselves, and are sure Reason hath nothing to do with what they see and feel in themselves; what they have a fenfible Experience of, admits no Doubt, needs no Probation. Would be not be ridiculous, who should require to have it proved to him, that the Light shines, and that he fees it? It is its own Proof, and can have no other. When the Spirit brings Light into our Minds, it dispels Darkness. We see it, as we do that of the Sun at Noon, and need not the Twilight of Reason to shew it us. This Light from Heaven is strong, clear, and pure; carries its own Demonstration with it; and we may as rationally take a Glow-worm to affift us to discover the Sun, as to examine the celestial Ray by our dim Candle, Reafon.

§. 9. This is the way of talking of these Men: they are sure, because they are sure; and their Persuasions are right,

only because they are strong in them. For, when what they say is stripped of the Metaphor of seeing or seeling, this is all it amounts to; and yet these Similes so impose on them, that they serve them, for Certainty in themselves, and Demonstration to others.

Enthusiasm, how to be discovered. §. 10. But to examine a little foberly this internal Light, and this Feeling on which they build so much. These Men have, they say, clear Light, and they see: They have an awakened Sense, and they feel: This cannot, they are

fure, be disputed them. For when a Man fays he sees or he feels, no Body can deny it him that he does fo. But here let me ask: This feeing, is it the Perception of the Truth of the Proposition, or of this, that it is a Revelation from God? This Feeling, is it a Perception of an Inclination or Fancy to do Something, or of the Spirit of God moving that Inclination? These are two very different Perceptions, and must be carefully distinguished, if we would not impose upon our felves. I may perceive the Truth of a Proposition, and yet not perceive that it is an immediate Revelation from God. I may perceive the Truth of a Proposition in Euclid, without its being, or my perceiving it to be a Revelation: Nay, I may perceive I came not by this Knowledge in a natural way, and fo may conclude it revealed, without perceiving that it is a Revelation from God; because there be Spirits, which, without being divinely commissioned, may excite those *Ideas* in me, and lay them in fuch Order before my Mind, that I may perceive their Connection. So that the Knowledge of any Propofition coming into my Mind, I know not how, is not a Perception that it is from God. Much less is a strong Persuasion that it is true, a Perception that it is from God, or fo much as true. But however it be called Light and Seeing, I suppose, it is at most but Belief and Assurance: and the Proposition taken for a Revelation, is not fuch as they know to be true, but take to be true. For where a Proposition is known to be true, Revelation is needless: And it is hard to conceive how there can be a Revelation to any one of what he knows already. If therefore it be a Proposition which they are perfuaded, but do not know, to be true, whatever they may call it, it is not Seeing, but Believing. For these are two ways, whereby Truth comes into the Mind, wholly distinct, fo that one is not the other. What I fee I know to be fo by the Evidence of the Thing it felf; what I believe, I take ro be so upon the Testimony of another: But this Testimony I must know to be given, or else what Ground, have I of Believing? I must see that it is God that reveals this to me, or else I see nothing. The Question then here is, How do I know that God is the Revealer of this to me; that this Impression is made upon my Mind by his holy Spirit, and that therefore I ought to obey it? If I know not this, how great foever the Affurance is, that I am possessed with, it is groundless; whatever Light I pretend to, it is but Enthufiasm. For whether the Proposition supposed to be revealed, be in it self evidently true, or visibly probable, or by the natural ways of Knowledge uncertain, the Proposition that must be well grounded, and manifested to be true, is this, that God is the Revealer of it, and that what I take to be a Revelation, is certainly put into my Mind by him, and is not an Illusion, dropped in by some other Spirit, or raised by my own Fancy. For if I mistake not, these Men receive it for true, because they presume God revealed it. then stand them upon, to examine upon what Grounds they prefume it to be a Revelation from God? Or else all their Confidence is mere Presumption; and this Light they are so dazled with, is nothing but an ignis fatuus, that leads them continually round in this Circle. It is a Revelation, because they firmly believe it; and they believe it, because it is a Revelation.

S. 11. In all that is of divine Revelation, Enthusiasm there is need of no other Proof, but that it is fails of Evian Inspiration from God: For he can neither dence, that the Proposideceive, nor be deceived. But how shall it be tion is from known, that any Proposition in our Minds, is a Truth infused by God; a Truth that is revealed to us by him, which he declares to us, and therefore we ought to believe? Here it is that Enthufiasm fails of the Evidence it pretends to. For Men thus possessed, boast of a Light whereby, they fay, they are enlightened, and brought into the Knowledge of this or that Truth. But if they know it to be a Truth, they must know it to be so either by its own Self-evidence to natural Reason, or by the rational Proofs that make it out to be fo. If they fee and know it to be a Truth either of these two ways, they in vain suppose it to be a Revelation. For they know it to be true by the fame way that any other Man naturally may know that it is so, without the Help of Revelation. For thus all Vol. II.

the Truths, of what kind foever, that Men uninspired are enlightened with, came into their Minds, and are established there. If they fay they know it to be true, because it is a Revelation from God, the Reason is good: But then it will be demanded, how they know it to be a Revelation from God. If they fay by the Light it brings with it, which shines bright in their Minds, and they cannot refist. I befeech them to confider, whether this be any more than what we have taken Notice of already, viz. that it is a Revelation, because they frongly believe it to be true. For all the Light they speak of, is but a strong, though ungrounded Persuasion of their own Minds, that it is a Truth. For rational Grounds from Proofs, that it is a Truth, they must acknowledge to have none; for then it is not received as a Revelation, but upon the ordinary Grounds that other Truths are received: And if they believe it to be true, because it is a Revelation, and have no other Reason for its being a Revelation, but because they are fully perfuaded, without any other Reason that it is true, they believe it to be a Revelation only because they strongly believe it to be a Revelation, which is a very unfafe Ground to proceed on, either in our Tenets or Actions: And what readier way can there be to run our felves into the most extravagant Errors and Miscarriages, than thus to set up Fancy for our fupream and fole Guide, and to believe any Proposition to be true, any Action to be right, only because we believe it to be. fo? The Strength of our Persuasions are no Evidence at all of their own Rectitude: Crooked Things may be as stiff and unflexible as Strait; and Men may be as positive and peremptory in Error as in Truth. How come else the untractable Zealots in different and opposite Parties? For if the Light, which every one thinks he has in his Mind, which in this Cafe is nothing but the Strength of his own Persuasion, be an Evidence that it is from God, contrary Opinions may have the same Title to be Inspirations; and God will be not only the Father of Lights, but of opposite and contradictory Lights, leading Men contrary Ways; and contradictory Propositions will be divine Truths, if an ungrounded Strength of Affurance be an Evidence, that any Proposition is a divine Revelation.

Firmness of Persuasson, no Proofithat any Proposition is from God. §. 12. This cannot be otherwise, whilst Firmness of Persuasion is made the Cause of Believing, and Confidence of being in the Right is made an Argument of Truth. St. Paul himfelf believed he did well, and that he had a Call

to it when he perfecuted the Christians, whom he confidently thought in the Wrong: But yet it was he, and not they, who were mistaken. Good Men are Men still, liable to Mistakes, and are sometimes warmly engaged in Errors, which they take for divine Truths, shining in their Minds with the clear-

est Light.

§. 13. Light, true Light in the Mind is, or can be nothing else but the Evidence of the Light in the Truth of any Proposition; and if it be not a Mind, wbat. felf-evident Proposition, all the Light it has, or can have, is from the Clearness and Validity of those Proofs upon which it is received. To talk of any other Light in the Understanding, is to put our felves in the Dark, or in the Power of the Prince of Darkness, and by our own Confent, to give our felves up to Delufion; to believe a Lie: For if Strength of Persuasion be the Light which must guide us, I ask how shall any one distinguish between the Delufions of Satan, and the Inspirations of the Holy Ghost? He can transform himself into an Angel of Lights And they who are led by this Son of the Morning, are as fully fatisfied of the Illumination, i. e. are as strongly perfuaded that they are enlightened by the Spirit of God, as any one who is fo: They acquiesce and rejoice in it, are acted by it; and no Body can be more fure, nor more in the right, (if their own strong Belief may be Judge) than they.

§. 14. He therefore that will not give himfelf up to all the Extravagancies of Delufion and Error, must bring this Guide of his Light within to the Tryal. God, when he makes the

Prophet, does not unmake the Man: He leaves

all his Faculties in their natural State, to enable him to judge of his Inspirations, whether they be of divine Original or no. When he illuminates the Mind with supernatural Light, he does not extinguish that which is natural. If he would have us affent to the Truth of any Proposition, he either evidences that Truth by the usual Method of natural Reason, or else makes it known to be a Truth, which he would have us affent to, by his Authority, and convinces us that it is from him, by some Marks which Reason cannot be mistaken in. Reason must be our last Judge and Guide in every Thing. I do not mean, that we must consult Reason, and examine whether a Proposition revealed from God

can be made out by natural Principles; and if it cannot, that then we may reject it: But confult it we must, and by it examine whether it be a Revelation from God or no: And if Reason finds it to be revealed from God, Reason then declares for it, as much as for any other Truth, and makes it one of her Dictates. Every Conceit that throughly warms our Fancies, must pass for an Inspiration, if there be nothing but the Strength of our Persuasions, whereby to judge of our Persuasions. If Reason must not examine their Truth by something extrinsical to the Persuasions themselves, Inspirations and Delusions, Truth and Falshood, will have the same Measure, and will not be possible to be distinguished.

Belief no Proof of Revelation. §. 15. If this internal Light, or any Proposition which under that Title we take for inspired, be conformable to the Principles of Reason, or to the Word of God, which is attested Revelation, Reason warrants it, and

we may fafely receive it for true, and be guided by it in our Belief and Actions: If it receive no Testimony nor Evidence from either of these Rules, we cannot take it for a Revelation, or so much as for true, till we have some other Mark that it is a Revelation, besides our believing that it Thus we fee the holy Men of Old, who had Revelations from God, had fomething else besides that internal Light of Assurance in their own Minds, to testify to them that it was from God. They were not left to their own Perfuafions alone, that those Persuasions were from God, but had outward Signs to convince 'em of the Author of those Revelations. And when they were to convince others, they had a Power given 'em to justify the Truth of their Commission from Heaven; and by visible Signs to affert the divine Authority of a Meffage they were fent with. Moles faw the Bush burn without being confumed, and heard a Voice out of This was fomething befides finding an Impulse upon his Mind to go to Pharach, that he might bring his Brethren out of Egypt; and yet he thought not this enough to authorize him to go with that Message, till God by another Miracle of his Rod turned into a Serpent, had affured him of a Power to testify his Mission by the same Miracle repeated before 'em whom he was fent to. Gideon was fent by an Angel to deliver Israel from the Midianites, and yet he defired a Sign to convince him, that this Commission was from God. These, and several the like Instances to be found among the Prophets of Old, are enough to shew, that they thought

not an inward Seeing or Persuasion of their own Minds, without any other Proof, a sufficient Evidence that it was from God, though the Scripture does not every where mention

their demanding or having such Proofs.

§. 16. In what I have faid, I am far for denying that God can, or doth fometimes enlighten Mens Minds in the apprehending of certain Truths, or excite them to good Actions, by the immediate Influence and Assistance of his holy Spirit, without any extraordinary Signs accompanying it. But in fuch Cases too we have Reason and the Scripture, unerring Rules to know whether it be from God or no. Where the Truth embraced is confonant to the Revelation in the written Word of God, or the Action conformable to the Dictates of right Reason, or holy Writ, we may be assured that we run no risk in entertaining it as fuch; because the perhaps it be not an immediate Revelation from God, extraordinarily operating on our Minds, yet we are fure it is warranted by that Revelation which he has given us of Truth. But it is not the Strength of our private Persuasion within our felves, that can warrant it to be a Light or Motion from Heaven; nothing can do that, but the written Word of God without us, or that Standard of Reason which is common to us with all Men. Where Reason or Scripture is express for any Opinion or Action, we may receive it as of Divine Authority; but 'tis not the Strength of our own Persuasions which can by it felf give it that Stamp. The Bent of our own Minds may favour it as much as we please; that may shew it to be a Fondling of our own, but will by no Means prove it to be an Offspring of Heaven, and of Divine Original,

CHAP. XX.

Of wrong Affent, or Error.

§. 1. K Nowledge being to be had only of visible certain Truth, Error is not a Fault of our Knowledge, but a Mistake of our Judgment, giving Assent to that which is not true.

Causes of Error.

But if Affent be grounded on Likelihood, if the proper Object and Motive of our Affent be Probability, and that Probability confifts in what is laid down in the foregoing Y 3 Chapters,

Chapters, it will be demanded, how Men come to give their Assents contrary to Probability. For there is nothing more common than Contrariety of Opinions; nothing more obvious, than that one Man wholly disbelieves what another only doubts of, and a third stedsaftly believes, and firmly adheres to. The Reasons whereof, tho' they may be very various, yet, I suppose, may be all reduced to these four.

1. Want of Proofs.

Want of Ability to use them.
 Want of Will to use them.
 Wrong Measures of Probability.

§. 2. First, By Want of Proofs, I do not mean only the Want of those Proofs which are no where extant, and so are no where

to be had; but the Want even of those Proofs which are in being, or might be procured. And thus Men want Proofs, who have not the Convenience or Opportunity to make Experiments and Observations themselves, tending to the Proof of any Proposition; nor likewise the Convenience to enquire into, and collect the Testimonies of others: And in this State are the greatest Part of Mankind, who are given up to Labour, and enflaved to the Necessity of their mean Condition, whose Lives are worn out only in the Provisions for Living. These Mens Opportunity of Knowledge and Enquiry, are commonly as narrow as their Fortunes, and their Understandings are but little instructed, when all their whole Time and Pains is laid out to still the Croaking of their own Bellies, or the Cries of their Children. not to be expected, that a Man who drudges on, all his Life, in a laborious Trade, should be more knowing in the Variety of Things done in the World, than a Pack-Horse who is driven constantly forwards and backwards in a narrow Lane. and dirty Road, only to Market, should be skilled in the Geography of the Country. Nor is it at all more possible, that he who wants Leisure, Books and Languages, and the Opportunity of conversing with Variety of Men, should be in a Condition to collect those Testimonies and Observations which are in being, and are necessary to make out many, nay, most of the Propositions, that in the Societies of Men, are judged of the greatest Moment; or to find out Grounds of Assurance so great, as the Belief of the Points he would build on them, is thought necessary. So that a great part of Mankind are, by the natural and unalterable State of Things in this World, and the Constitution of human Affairs, unavoidably

avoidably given over to invincible Ignorance of those Prooss on which others build, and which are necessary to establish those Opinions; the greatest part of Men, having much to do to get the Means of Living, are not in a Condition to look after those of learned and laborious Enquiries.

§. 3. What shall we say then? Are the greatest Part of Mankind, by the necessity of their Condition, subjected to unavoidable Ignorance in those Things which are of greatest Importance to them? (for of those 'tis obvious to enquire.) Have the Bulk of Mankind no other Guide, but Accident and blind Chance,

Obj. What shall become of those who want them, answered.

to conduct them to their Happiness or Misery? Are the current Opinions, and licensed Guides of every Country, sufficient Evidence and Security to every Man, to venture his greatest Concernments on; nay, his everlasting Happiness or Misery? Or can those be the certain and infallible Oracles and Standards of Truth, which teach one thing in Christendom, and another in Turky? Or shall a poor Countryman be eternally happy, for having the Chance to be born in Italy; or a Day-Labourer be unavoidably loft, because he had the ill Luck to be born in England? How ready some Men may be to say some of these Things, I will not here examine; but this I am fure, that Men must allow one or other of these to be true, (let them chuse which they please) or else grant, that God has furnished Men with Faculties sufficient to direct them in the Way they should take, if they will but feriously employ them that way, when their ordinary Vocations allow them the Leisure. No Man is fo wholly taken up with the Attendance on the Means of Living, as to have no spare Time at all to think of his Soul, and inform himself in Matters of Religion. Were Men as intent upon this, as they are on Things of lower Concernment. there are none fo inflaved to the Necessities of Life, who might not find many Vacancies that might be husbanded to this Advantage of their Knowledge.

§. 4. Besides those whose Improvements and Informations are straitened by the Narrowness of their Fortunes, there are others, whose Largeness of Fortune would plentifully enough supply Books, and other Requisites for clearing of

People bino dered from Enquiry.

Doubts, and discovering of Truth; but they are ecop'd in close, by the Laws of their Countries, and the strict Guards of those whose Interest it is to keep them ignorant, lest, knowing more,

they should believe the less in them. These are as far, nav. farther from the Liberty and Opportunities of a fair Enquiry, than those poor and wretched Labourers we before fpoke of; and however they may feem high and great, are confined to Narrowness of Thought, and enflaved in that which should be the freest part of Man, their Understandings. This is generally the Cafe of all those who live in Places where Care is taken to propagate Truth without Knowledge, where Men are forced, at a Venture, to be of the Religion of the Country, and must therefore swallow down Opinions, as filly People do Empiricks Pills, without knowing what they are made of, or how they will work, and have nothing to do, but believe that they will do the Cure; but in this, are much more miserable than they, in that they are not at Liberty to refuse swallowing what perhaps they had rather let alone, or to chuse the Physician to whose Conduct they would trust themselves.

shem.

§. 5. Secondly, Those who want Skill to use 2dly, Wazt those Evidences they have of Probabilities, who of Skill to vse cannot carry a Train of Consequences in their Heads, nor weigh exactly the Preponderancy of contrary Proofs and Testimonies, making

every Circumstance its due Allowance, may be easily misled to affent to Politions that are not probable. There are fome Men of one, some but of two Syllogisms, and no more; and others that can but advance one Step farther. These cannot always differn that fide on which the strongest Proofs lie, cannot confiantly follow that which in it felf is the more probable Opinion. Now that there is fuch a Difference between Men, in respect of their Understandings, I think no Body, who has had any Conversation with his Neighbours, will question, though he never was at Westminster-Hall, or the Exchange, on the one Hand; nor at Alms-Houses, or Bedlam, on the other: Which great Difference in Mens Intellectuals, whether it rifes from any Defect in the Organs of the Body, particularly adapted to Thinking; or in the Dulness or Untractableness of those Faculties, for want of Use; or, as some think, in the natural Differences of Mens Souls themselves; or fome, or all of these together, it matters not here to examine: Only this is evident, that there is a Difference of Degrees in Mens Understandings, Apprehensions and Reasonings, to so great a Latitude, that one may, without doing Injury to Mankind, affirm, that there is a greater Distance between some Men, and others, in this respect, than between some Men,

and some Beasts. But how this comes about, is a Speculation, though of great Consequence, yet not necessary to our present

Purpose.

§. 6. Thirdly, There are another Sort of People that want Proofs, not because they are out of their Reach, but because they will not use them; who, though they have Riches and

3dly, Want of Will to use them.

Leifure enough, and want neither Parts nor other Helps, are yet never the better for them. Their hot Pursuit of Pleasure, or constant Drudgery in Business, engages some Mens Thoughts elsewhere; Laziness and Oscitancy in general, or a particular Aversion for Books, Study, and Meditation, keep others from any ferious Thoughts at all; and some out of Fear, that an impartial Enquiry would not favour those Opinions which best suit their Prejudices, Lives and Defigns, content themselves without Examination, to take upon Trust, what they find convenient, and in Fashion. Thus most Men, even of those that might do otherwise, pass their Lives without an Acquaintance with, much less a rational Affent to Probabilities they are concerned to know, though they lie fo much within their View, that to be convinced of them they need but turn their Eyes that Way. But we know some Men will not read a Letter, which is supposed to bring ill News; and many Men forbear to cast up their Accompts, or so much as think upon their Estates, who have Reason to sear their Affairs are in no very good Posture. How Men, whose plentiful Fortunes allow them Leisure to improve their Understandings, can satisfy themselves with a lazy Ignorance, I cannot tell; but methinks they have a low Opinion of their Souls, who lay out all their Incomes in Provisions for the Body, and employ none of it to procure the Means and Helps of Knowledge; who take great Care to appear always in a neat and splendid Outside, and would think themselves miserable in coarse Cloaths, or a patched Coat, and yet contentedly suffer their Minds to appear abroad in a pie-bald Livery of coarse Patches, and borrowed Shreds, fuch as it has pleafed Chance, or their Country Taylor, (I mean the common Opinion of those they have conversed with) to cloath them in. I will not here mention how unreasonable this is for Men that ever think of a future State, and their Concernment in it, which no rational Man can avoid to do fometimes; nor shall I take Notice what a Shame and Confusion it is, to the greatest Contemners of Knowledge,

to be found ignorant in Things they are concerned to know. But this, at least, is worth the Confideration of those who call themselves Gentlemen, That however they may think Credit, Respect, Power and Authority the Concomitants of their Birth and Fortune, yet they will find all these still carried away from them by Men of lower Condition, who furpals them in Knowledge. They who are blind will always be led by those that see, or else fall into the Ditch: And he is certainly the most subjected, the most enslaved, who is fo in his Understanding. In the foregoing Instances, some of the Causes have been shewn of wrong Assent, and how it comes to pass, that probable Doctrines are not always received with an Affent proportionable to the Reasons which are to be had for their Probability: But hitherto we have confidered only such Probabilities, whose Proofs do exist, but do not appear to him that embraces the Error.

Athly, Wrong Measures of Probability; whereof,

§. 7. Fourthly, There remains yet the last Sort, who, even where the real Probabilities appear, and are plainly laid before them, do not admit of the Conviction, nor yield unto manifest Reasons, but do either integrate, suf-

pend their Affent, or give it to the less probable Opinion. And to this Danger are those exposed, who have taken up wrong Measures of Probability, which are,

1. Propositions that are not in themselves certain and evident, but doubtful and false, taken up for Principles.

2. Received Hypotheses.

3. Predominant Passions or Inclinations.

4. Authority.

First, Doubtful Propositions taken for Principles. §. 8. First, The first and firmest Ground of Probability, is the Conformity any Thing has to our own Knowledge; especially that Part of our Knowledge which we have embraced, and continue to look on as Principles. These have so great an Instuence upon our Opinions,

that 'tis usually by them we judge of Truth, and measure Probability to that Degree, that what is inconsistent with our Principles, is so far from passing for probable with us, that it will not be allow'd possible. The Reverence born to these Principles, is so great, and their Authority so paramount to all other, that the Testimony not only of other Men.

Men, but the Evidence of our own Senses are often rejected, when they offer to vouch any Thing contrary to these established Rules. How much the Doctrine of innate Principles, and that Principles are not to be proved or questioned, has contributed to this, I will not here examine. This I readily grant, that one Truth cannot contradict another; but withal I take Leave also to say, that every one ought very carefully to beware what he admits for a Principle, to examine it strictly, and see whether he certainly knows it to be true of it self by its own Evidence, or whether he does only with Affurance believe it to be so, upon the Authority of others: For he hath a strong Byass put into his Understanding, which will unavoidably misguide his Assent, who hath imbibed wrong Principles, and has blindly given himself up to the Authority

of any Opinion in it felf not evidently true.

§. 9. There is nothing more ordinary, than that Children should receive into their Minds Propositions (especially about Matters of Religion) from their Parents, Nurses, or those about them; which being infinuated into their unwary, as well as unbiaffed Understandings, and fastened by Degrees, are at last (equally, whether true or false) riveted there, by long Custom and Education, beyond all Possibility of being pulled out again. For Men, when they are grown up, reflecting upon their Opinions, and finding those of this Sort to be as antient in their Minds as their very Memories, not having observed their early Infinuation, nor by what Means they got them, they are apt to reverence them as facred Things, and not to suffer them to be prophaned, touched or questioned: They look on them as the Urim and Thummim fet up in their Minds immediately by GOD himfelf, to be the great and unerring Deciders of Truth and Falshood, and the Judges to which they are to appeal in all manner of Controversies.

§. 10. This Opinion of his Principles (let them be what they will) being once established in any one's Mind, it is easy to be imagined, what reception any Proposition shall find, how clearly soever proved, that shall invalidate their Authority, or at all thwart with these internal Oracles: Whereas, the grossest Absurdities and Improbabilities, being but agreeable to such Principles, go down glibly, and are easily digested. The great Obstinacy that is to be found in Men sirmly believing quite contrary Opinions, though many times equally absurd in the various Religions of Mankind, are as evident

evident a Proof, as they are an unavoidable Consequence of this Way of Reasoning from received traditional Principles. So that Men will disbelieve their own Eyes, renounce the Evidence of their Senses, and give their own Experience the Lye, rather than admit of any Thing disagreeing with these facred Tenets. Take an intelligent Romanist, that from the very first dawning of any Notions in his Understanding, hath had this Principle constantly inculcated, viz. That he must believe as the Church (i. e. those of his Communion) believes, or that the Pope is infallible; and this he never fo much as heard questioned, till at Forty or Fifty Years old he met with one of other Principles; How is he prepared eafily to fwallow, not only against all Probability, but even the clear Evidence of his Senses, the Doctrine of Transubstantiation? This Principle has fuch an Influence on his Mind, that he will believe that to be Flesh, which he sees to be Bread. And what way will you take to convince a Man of any improbable Opinion he holds. who, with some Philosophers, hath laid down this as a Foundation of Reasoning, That he must believe his Reason (for so Men properly call Arguments drawn from their Principles) against his Senses? Let an Enthusiast be principled that he or his Teacher is inspired, and acted by an immediate Communication of the divine Spirit, and you in vain bring the Evidence of clear Reasons against his Doctrine. Whoever therefore have imbibed wrong Principles, are not, in Things inconsistent with these Principles, to be moved by the most apparent and convincing Probabilities, till they are fo candid and ingenuous to themselves, as to be persuaded to examine even those very Principles, which many never fuffer themselves to do.

S. 11. Secondly, Next to these, are Men Secondly, whose Understandings are cast into a Mold, and Received Hyfashioned just to the Size of a received Hypopotheses. The Difference between these and the thesis. former, is, that they will admit of Matter of Fact, and agree with Diffenters in that; but differ only in affigning of Reasons, and explaining the Manner of Operation. These are not at that open Defiance with their Senses, with the former; they can endure to hearken to their Information a little more patiently; but will by no means admit of their Reports in the Explanation of Things; nor be prevailed on by Probabilities, which would convince them, that Things are not brought about just after the same Manner that they have decreed

decreed within themselves that they are. Would it not be an infufferable Thing, for a learned Professor, and that which his Scarlet would blush at, to have his Authority of Forty Years standing, wrought ought of hard Rock Greek and Latin, with no small Expence of Time and Candle, and confirmed by general Tradition, and a reverend Beard, in an Instant over-turned by an upstart Novelist? Can any one expect that he should be made to confess, That what he taught his Scholars Thirty Years ago, was all Error and Mistake; and that he fold them hard Words and Ignorance at a very dear Rate? What Probabilities, I say, are sufficient to prevail in such a Case? And who ever by the most cogent Arguments will be prevailed with, to difrobe himfelf at once of all his old Opinions, and Pretences to Knowledge and Learning, which with hard Study, he hath all his Time been labouring for; and turn himself out stark naked in Quest asresh of new Notions? All the Arguments can be used, will be as little able to prevail, as the Wind did with the Traveller, to part with his Cloak, which he held only the faster. To this of wrong Hypothesis, may be reduc'd the Errors, that may be occasioned by a true Hypothesis, or right Principles, but not rightly understood. There is nothing more familiar than this. The Instances of Men contending for different Opinions, which they all derive from the infallible Truth of the Scripture, are an undeniable Proof of it. All that call themselves Christians, allow the Text that fays, ueravoeire, to carry in it the Obligation to a very weighty Duty. But yet however erroneous will one of their Practices be, who understanding nothing but the French, take this Rule with one Translation to be repentez vous, repent: or with the other faitiez Penitence, do Penance.

§. 12. Thirdly, Probabilities, which cross Mens Appetites, and prevailing Paffions, run the same Fate. Let never so much Probability hang on one side of a covetous Man's Reasoning, and Money on the other, it is easy to fore-

Thirdly, Predominant Passions.

fee which will outweigh. Earthly Minds, like Mud-Walls, refift the strongest Batteries; and tho', perhaps, sometimes the Force of a clear Argument may make some Impression, yet they nevertheless stand firm, keep out the Enemy Truth, that would captivate or disturb them. Tell a Man, passionately in Love, that he is Jilted; bring a score of Witnesses of the Falshood of his Mistress, 'tis ten to one but three kind Words

of hers shall invalidate all their Testimonies. Quod volumus; facile credimus; what suits our Wishes, is forwardly believed; is, I suppose, what every one hath more than once experimented; and though Men cannot always openly gainsay or resist the Force of manifest Probabilities, that make against them, yet yield they not to the Argument; not but that it is the Nature of the Understanding constantly to close with the more probable side, but yet a Man hath a Power to suspend and restrain its Enquiries, and not permit a sull and satisfactory Examination, as far as the Matter in Question is capable, and will bear it to be made. Until that be done, there will be always these two ways left of evading the most apparent Probabilities.

The Means of evading Probabilities: first, Supposed Fallacy.

§. 13. First, That the Arguments being (as for the most part they are) brought in Words; there may be a Fallacy latent in them; and the Consequences being, perhaps, many in train; they may be some of them incoherent. There are very sew Discourses so short, clear, and consistent, to which most Men may not, with Satis-

faction enough to themselves, raise this Doubt; and from whose Conviction they may not, without Reproach of Disingenuity or Unreasonableness, set themselves free with the old Reply, Non persuadebis, etiamsi persuaseris; though I cannot answer, I will not yield.

Secondly, Supposed Arguments for the contrary. §. 14. Secondly, Manifest Probabilities may be evaded, and the Affent with-held upon this Suggestion, That I know not yet all that may be faid on the contrary side. And therefore, though I be beaten, 'tis not necessary I should yield, not knowing what Forces there are in

Referve behind. This is a Refuge against Conviction, so open and so wide, that it is hard to determine, when a Man is quite out of the Verge of it.

Man is quite out of the Verge of it.

What Probabilities determine the Assent.

§. 15. But yet there is some End of it, and a Man having carefully enquired into all the Grounds of Probability and Unlikeliness, done his utmost to inform himself in all Particulars fairly, and cast up the Sum total on both sides, may in most Cases come to acknowledge, upon

the whole Matter, on which fide the Probability rests; wherein some Proofs in Matter of Reason, being Suppositions upon universal Experience, are so cogent and clear, and some Testimonies in Matter of Fact so universal, that he cannot

refule

refuse his Assent. So that, I think, we may conclude, that in Propositions, where though the Proofs in view are of most Moment, yet there are sufficient Grounds to suspect, that there is either Fallacy in Words, or certain Proofs, as confiderable. to be produced on the contrary Side, there Affent, Suspense, or Dissent, are often voluntary Actions: But where the Proofs are fuch as make it highly probable, and there is not fufficient Ground to suspect that there is either Fallacy of Words, (which fober and ferious Confideration may discover) nor equally valid Proof yet undiscovered latent on the other Side. (which also the Nature of the Thing, may, in some Cases, make plain to a confiderate Man) there, I think, a Man, who has weighed them, can scarce refuse his Assent to the fide on which the greater Probability appears. Whether it be probable, that a promiscuous Jumble of Printing Letters should often fall into a Method and Order, which should stamp on a Paper a coherent Discourse; or that a blind fortuitous Concourse of Atoms, not guided by an Understanding Agent, should frequently constitute the Bodies of any Species of Animals: In these and the like Cases, I think, no Body that confiders them, can be one jot at a stand, which Side to take, nor at all waver in his Assent. Lastly, When there can be no Supposition, (the Thing in its own Nature indifferent, and wholly depending upon the Testimony of Witnesses) that there is as fair Testimony against, as for the Matter of Fact attested; which by Enquiry is to be learned, v. g. whether there was 1700 Years agone fuch a Man at Rome as Julius Cæsar: In all such Cases I say, I think it is not in any rational Man's Power to refuse his Assent; but that it necessarily follows, and closes with fuch Probabilities. In other less clear Cases, Ithink it is in a Man's Power to suspend his Assent; and perhaps, content himself with the Proofs he has, if they favour the Opinion that fuits with his Inclination or Interest, and fo stop from farther Search. But that a Man should afford his Assent to that side, on which the less Probability appears to him, feems to me utterly impracticable, and as impossible, as it is to believe the fame Thing probable and improbable at the fame time.

&. 16. As Knowledge is no more arbitrary Where it is than Perception; fo, I think, Affent is no in our Power more in our Power than Knowledge. to suspend it. the Agreement of any two Ideas appears to our

Minds, whether immediately, or by the Affisfance of Rea-

fon, I can no more refuse to perceive, no more avoid knowing it, than I can avoid feeing those Objects which I turn my Eyes to, and look on in Day-light: And what, upon full Examination, I find the most probable, I cannot deny my Affent to. But though we cannot hinder our Knowledge. where the Agreement is once perceived; nor our Affent; where the Probability manifestly appears upon due Consideration of all the Measures of it; yet we can hinder both Knowledge and Affent, by stopping our Enquiry, and not employing our Faculties in the Search of any Truth. If it were not fo, Ignorance, Error, or Infidelity, could not in any Cafe be a Fault. Thus in some Cases we can prevent or fuspend our Assent: But can a Man, versed in modern or antient History, doubt whether there be fuch a Place as Rome, or whether there was such a Man as Julius Casar? Indeed there are Millions of Truths, that a Man is not, or may not think himself concerned to know, as whether our King Richard the Third was Crook-back'd, or no; or whether Roger Bacon was a Mathematician, or a Magician. In these and such like Cases, where the Assent, one way or other, is of no Importance to the Interest of any one, no Action, no Concernment of his following, or depending thereon, there 'tis not strange that the Mind should give it self up to the common Opinion, or render it felf to the first Comer. These and the like Opinions, are of so little Weight and Moment, that, like Motes in the Sun, their Tendencies are very rarely taken Notice of. They are there, as it were, by Chance, and the Mind lets them float at Liberty. But where the Mind judges that the Proposition has Concernment in it; where the Affent or not Affenting is thought to draw Confequences of Moment after it, and Good or Evil to depend on chusing or refusing the right side, and the Mind sets it self feriously to enquire, and examine the Probability; there, I think, it is not in our Choice to take which fide we pleafe, if manifest odds appear on either. The greater Probability, I think, in that Case, will determine the Assent; and a Man can no more avoid affenting, or taking it to be true, where he perceives the greater Probability, than he can avoid knowing it to be true, where he perceives the Agreement or Difagreement of any two Ideas.

If this be so, the Foundation of Error will lye in wrong Measures of Probability; as the Foundation of Vice in wrong

Measures of Good.

§. 17. Fourthly, The fourth and last wrong Measure of Probability I shall take Notice of, and which keeps in Ignorance or Error more People than all the other together, is that

Fourthly, Authority.

which I have mentioned in the foregoing Chapter, I mean, the giving up our Affent to the common received Opinions. either of our Friends or Party, Neighbourhood or Country. How many Men have no other Ground for their Tenets, than the supposed Honesty or Learning, or Number of those of the same Profession? As if honest or bookish Men could not err; or Truth were to be established by the Vote of the Multitude; yet this, with most Men, serves the Turn. The Tenet has had the Attestation of reverend Antiquity; it comes to me with the Paffport of former Ages, and therefore I am secure in the Reception I give it; other Men have been, and are of the same Opinion, (for that is all is said) and therefore it is reasonable for me to embrace it. A Man may more justifiably throw up Cross and Pile for his Opinions, than take them up by fuch Measures. All Men are liable to Error, and most Men are, in many Points, by Passion or Interest, under Temptation to it. If we could but see the secret Motives that influenced the Men of Name and Learning in the World, and the Leaders of Parties, we should not always find, that it was the embracing of Truth for its own Sake, that made them espouse the Doctrines they owned and maintained. This at least is certain, there is not an Opinion so absurd, which a Man may not receive upon this Ground. There is no Error to be named, which has not had its Professors; and a Man shall never want crooked Paths to walk in, if he thinks that he is in the right Way, wherever he has the Footsteps of others to follow.

§. 18. But notwithstanding the great Noise is made in the World about Errors and Opinions, I must do Mankind that Right, as to say, There are not so many Men in Errors, and wrong Opinions, as is commonly supposed.

Men not in fo many Errors as is imagined.

Not that I think they embrace the Truth; but indeed because concerning those Doctrines they keep such a stir about they have no Thought, no Opinion at all. For if any one should a little catechize the greatest part of the Partizans of most of the Sects in the World, he would not find, concerning those Matters they are so zealous for, that they have any Vol. II.

Opinions of their own: much less would be have Reason to think, that they took them upon the Examination of Arguments, and Appearance of Probability. They are resolved to flick to a Party that Education or Interest has engaged them in; and there, like the common Soldiers of an Army, thew their Courage and Warmth as their Leaders direct, without ever examining, or fo much as knowing the Caufe they contend for. If a Man's Life shews that he has no ferious Regard for Religion; for what Reason should we think, that he beats his Head about the Opinions of his Church, and troubles himself to examine the Grounds of this or that Doctrine? 'Tis enough for him to obey his Leaders, to have his Hand and his Tongue ready for the Support of the common Caufe, and thereby approve himself to those who can give him Credit, Preferment or Protection in that Society. Thus Men become Profesiors of, and Combatants for those Opinions they were never convinced of, nor Profelytes to; no, nor ever had fo much as floating in their Heads; and tho one cannot fay there are fewer improbable or erroneous Opinions in the World than there are, yet this is certain, there are fewer that actually affent to them, and mistake them for Truths, than is imagined.

CHAP. XXI.

Of the Division of the Sciences.

Three Sorts.

S. I. A L L that can fall within the Compass of Human Understanding being either, First, The Nature of Things, as they are in themselves, their Relations, and their Manner of Operation: Or, Secondly, That which Man himself ought to do, as a rational and voluntary Agent, for the Attainment of any End, especially Happiness: Or, Thirdly, The Ways and Means whereby the Knowledge of both the one and the other of these are attained and communicated: I think, Science may be divided properly into these sorts.

S. 2. First, the Knowledge of Things, as they are in their own proper Beings, their Conflitutions, Properties and Operations, whereby I mean not only Matter and Body, but Spirits also, which have their proper Natures, Constitutions, and Operations, as well as Bodies. This, in a little more enlarged Sense of the Word, I call Domin, or natural Philosophy. The End of this is bare speculative Truth, and whatsoever can afford the Mind of Man any such, falls under this Branch, whether it be God himself, Angels, Spirits, Bodies, or any of their Affections, as Number and Figure, &c.

§. 3. Secondly, Hearlinh, The Skill of right applying our own Powers and Actions, for the Attainment of Things good and useful. Practica. The most considerable under this Head, is Ethicks, which is the seeking out those Rules and Measures of human Actions, which lead to Happiness, and the Means to practile them. The End of this is not bare Speculation, and the Knowledge of Truth; but Right, and a Conduct suitable

to it. §. 4. Thirdly, The third Branch may be

called Samenzi, or the Dostrine of Signs, the Thirdly, Enmost usual whereof being Words, it is aptly μιωπκή. enough termed also Aounn, Logick; the Business whereof is to confider the Nature of Signs the Mind makes use of for the understanding of Things, or conveying its Knowledge to others. For fince the Things the Mind contemplates are none of them, besides it self, present to the Understanding, 'tis necessary that something else, as a Sign or Representation of the thing it confiders, should be present to it: And these are Ideas. And because the Scene of Ideas that makes one Man's Thoughts, cannot be laid open to the immediate View of another, nor laid up any where but in the Memory, a no very fure Repository; therefore, to communicate our Thoughts to one another, as well as record them for our own Use, Signs of our Ideas are also necessary. Those which Men have found most convenient, and therefore generally make Use of, are articulate Sounds. The Confideration then of *Ideas* and *Words*, as the great Instruments of Knowledge, makes no despicable part of their Contemplation, who would take a View of Human Knowledge in the whole Extent of it. And perhaps if they were diffinstly weighed.

weighed, and duly confidered, they would afford us another Sort of Logick and Critick, than what we have been hitherto acquainted with.

This is the first Division of the Objects of Knowledge.

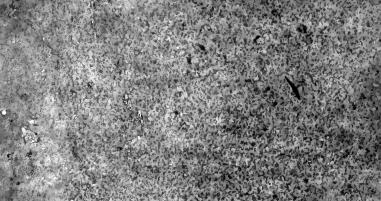

§. 5. This feems to me the first and most general, as well as natural Division of the Objects of our Understanding. For a Man can employ his Thoughts about nothing, but either the Contemplation of Things themselves, for the Discovery of Truth, or about the Things

in his own Power, which are his own Actions, for the Attainment of his own Ends; or the Signs the Mind makes Use of, both in the one and the other, and the right ordering of them for its clearer Information. All which three, viz. Things as they are in themselves knowable: Actions as they depend on us, in order to Happiness; and the right Use of Signs in order to Knowledge, being toto Calo different, they seemed to me to be the three great Provinces of the intellectual World, wholly separate and distinct one from another.
